1. Hale-Bopp Comet/Atari Tail?

Newsgroup: comp.sys.atari.st
Date: 1997-04-01 00:00:00 UTC
From: csilver@kendaco.telebyte.Spam.This.com
Message-ID: <5hqm7u$adj@news.telebyte.com>
Source record: 124724

Hi Kemosabes,

I just saw the Hale-Bopp comet tonight here in Seattle. I didn't see
any space craft, but the tail of the comet did resemble the Atari Logo.
a
|
/|\
Maybe we should all put on our Atari Logo T-Shirts so we can be "beamed"
aboarded. On second thought, what alien space craft would follow a dirty
snowball. Would you drive your Porsche behind a dump truck spilling trash
for two million miles behind you? Not very smart for an advanced tribe.

I guess we should wait for a better sign.

April Fools,

Charles

Accelerator boards Falcon

3.3.1 Afterburner040

Afterburner040 the only 68040 accelerator board for the
Falcon030. Uses a 32MHz 68040 RC (with FPU) or LC (without FPU). A
32-bit expansion port and up to 64MB of Fast-RAM. Can be used togheter
with an accelerator like Nemesis to get even more speed.

> Falcon 16/030 1-14Mb P 4.04 1.44Mb BE TCDFGX Many enhancements

> E=Enhanced 8bit DMA stereo sound, 4096 colour palette, hardware scrolling,
> analog joystick ports
> S=MegaBus processor direct bus slots
> V=6U VME bus slot
> K=Detached keyboard design
> T=Internal time/date clock
> C=68882 Math co-processor

D=DSP (56001) subsystem
F=8-channel 16-bit soundssystem
G=16-bit graphics system
X=16-bit expansion port

Or whatever you want. Maybe it's better to describe each machine
individual as the Falcon has got so much stuff that the others havn't
got.

:
: heheheheehehehehehehehehehehehehehe

You may not like what "Mr. Silver" is saying overall but he is right in this case--not even in this era can a single computer model claim to have sold as many units as the Commodore 64.

As for the point of what he's saying--he IS right about at least one other thing. When "STReport" (no disrespect to Dana but this is a pretty big misnomer, and yes I'm aware of its history) talks about FBI raids on pirated software, they're NOT referring to ST software. Or 64 software, or Apple 8-bit software or TI 99 software or Amiga software or Spectrum software. They're talking about software from the companies with big bucks--PC software. (To a lesser extent, Mac software of course.)

As for you freaking out about the use of "federal" in this discussion, it was brought up by an American and was about an American incident, so what's the problem?

Even with gluestik and cab.ovl 1.21 I can't follow a mailto. Maybe I'm doing something wrong, but what?

>2. The mintnet overlay does not insert your e-mail address into the
>password when following an ftp link. Some sites, cnam for example, will
>refuse to allow you on unless you use a real e-mail address.

I thought it was impossible to follow a ftp link with the mintnet overlay. That's why I defined aFTP to run whenever I came across a ftp link. It's not very keen but atleast it works for me. I haven't try to follow a ftp link with gluestik yet. That's something I'll try this night.

Apart of the probems above I also found that is was impossible to follow numeric URL. With gluestik no problem.

13. Old Atari ST software

Newsgroup: comp.sys.atari.st
Date: 1997-04-01 00:00:00 UTC
From: main@appstate.edu
Message-ID: <859930859.2213@dejanews.com>
Source record: 124736

I have read many messages in this newsgroup regarding the legality of distributing/pirating copyrighted software. I feel that there are valid points on both sides of the issue.
I think one way that the issue could be solved is for the remaining commercial vendors of Atari software to realistically price the software that they stock. For instance, I have seen copies of SimCity for the Atari ST selling for over $50 from Atari dealers. K-Mart, on the other hand, sells SimCity Classic for the PC for $15. If Atari dealers would realistically price their software, I don't think pirating would be such an issue.
Also, I wonder if companies like Maxis, which makes the Sim products, would approve of the price gouging that Atari dealers engage in. After all, they have set MSRPs for their products at far below what these dealers are charging.
Setting low, realistic prices for old software would enable the software to be used and distributed more broadly (which is what pirates seem to want for all this old software) as well as enable software distribution that adheres to copyright law.

Let me know your thoughts

Until 27C512(27C256?), eproms and roms are pin to pin compatible.

This is no more true with 1Mbits and up.

So on stF, you can put roms or eproms(6 chips version only) without
any modification.

Thierry.

Hi!

Recently I connected a 121 Meg IDE 2.5" Conner to my Falcon. Just
plug the cable in the drive and connector, and it's working, no jumpers,
no anything else. There is a Falcon internal HD kit you can get from ATY
computers (and other distributors by sure). It includes the cable and a
stand for the driver with all the screws.
Be sure to have the HD driver in the booting diskette to test the
drive.

Regards.

Daniel.

16. Mega Ste SCSI host Adaptor and Link II

Newsgroup: comp.sys.atari.st
Date: 1997-04-01 00:00:00 UTC
From: Alyre Chiasson <chiassa@umoncton.ca>
Message-ID: <334150FB.1F89@umoncton.ca>
Source record: 124739

I want to try my Link II in the place of my Mega Ste internal SCSI host adaptor (I believe the internal adaptor may be causing problems). I had an IDE connector to SCSI connector cable built. I removed the internal adaptor, plugged the SCSI end of the LINK II into the SCSI end of the cable I had build and the IDE connector end into the SCSI drive. The other end of the LINK was plugged into the DMA port. The red side of the cable was plugged in as the original cable, red side towards the power supply.

SCSI Drive ---IDE connector ----cable ---SCSI connector---LINK II----DMA port

When I turn it on the drive boots up and I get:

ID 0 *Unrecognised unit*

Cache disabled

NO ICD HOST Adaptor found.

The red light of the host adaptor is on so it is getting power. Is there a dip switch that I should flip. I notice that dip switch 7 is on should it be off? I think this is for the 1.4 MEG floppy? Is there some other switch to flip or change to make if an internal board is not present?

Also, I also have a spare Mega STe mother board. The TOS chips are labelled:

TOS Mega STE
C302019-002B
$0B26 USA

Is this TOS 2.5 or TOS 2.6? (B26 = TOS 2.6?)

Still learning about my machine.

Thanks

Alyre Chiasson

18. Need Hard Drive and 4 Meg expansion, have neat trade stuff.

Newsgroup: comp.sys.atari.st
Date: 1997-04-01 00:00:00 UTC
From: Destiny <destiny@digital.net>
Message-ID: <33418B72.3D5F@digital.net>
Source record: 124741

I am looking for an external hard drive for an atari 1040 stf and a 4
meg expansion board. Also would like some professional midi software.
Make me an offer with these items and I will take the best one.
Everything listed below is as a package. Thanks for looking.

For trade:
Dauphin DTR-1 palm top computer.

486SLC-25 with 4 meg ram
internal 40 meg HP kitty hawk drive double spaced to 80
built in 2400 baud modem/9600 fax
built in ethernet port (10 base T)
built in VGA 640x480 grey screen LCD
oak super vga video port, parallel port, serial port
floppy/ide port, keyboard port and power hookup.
has cordless pointer that works like a mouse
unit is 8 inches by 6 inches and has plastic hard cover
and case which holds an external keyboard (small). Has
external attaching floppy drive (1.44) and i built a
cd rom cable for it. Also included will be an
external 14.4 modem.

includes windows 3.1. I have run linux and windows 95
on the machine with the use of a zip drive.

If I get many offers, I will trade to the first one
that has lots of midi software in the trade.

Picture of part of it found at
http://www.eskimo.com/~toby/dtr1/images/dtr1.gif

Thanks
Rick

The king of M68k series computers has been purchased by Gateway 2000. The power PC amiga will be here. It is time now for you to all save you cash for the PPC Amiga, put the ST's in the closet and prepare for the revolution (ehehhe I wish).

Aw come on sell/closet the damn ST's and save for the PPCAmiga be happy again!!!!

Joe

Gateway 2000 Acquires Assets of Amiga Technologies GmbH

North Sioux City, South Dakota, March 27 1997 - Gateway 2000 Inc. (Nasdaq: Gate) today announced that the company has made an offer to aquire the assets of AMIGA Technologies including all patents, trademaks and trade names. The Company is a subsidary of ESCOM AG, a German-based computer company that went into bankrupty in July of 1996. Amiga led the industry in combining computer graphics, animation, and film sequences with stereo sound known today as multimedia.

The offer has been accepted by the court-appointed Administrator in Bankruptcy in Germany acting on behalf of AMIGA. The agreement is subject to regulatory approval.

"This acquisition is good news for Gateway and customers of AMIGA," said Rick Snyder, president and COO of Gateway 2000. "It will strengthen our intellectual property position and invigorate a company that has been a pioneer in multimedia solutions and operating systems technology."

AMIGA Technologies will be renamed AMIGA International. The company will operate as a separate business unit and will retain its current president, Petro Tyschtschenko, who will work to develop new products for the AMIGA market.

"Gateway 2000 will give us new life and energy for the future," said Tyschtschenko.

Anyone Downloaded and liked ST+ 14? , Well you can now download every back issue, this is a monthly diskzine and has been out for over a year, you can download the full set of 13 back issues from the ST+ Diskmagazine web page NOW.....all are seperate zip files so check out an issues index first then decide which issue to download:)

ST+ 15 Due for release this week......

.

Cheers !ynoT (ATARI Programmer)

25. Want Hard Disk and Software.

Newsgroup: comp.sys.atari.st
Date: 1997-04-01 00:00:00 UTC
From: Richard Burnett <rick@rp.fit.edu>
Message-ID: <33418130.2866@rp.fit.edu>
Source record: 124748

Looking for an external hard disk for the STf. Also want professional
MIDI software, but with a big hard drive, i'll just take the drive. I
will trade the following for it:

For trade:
Dauphin DTR-1 palm top computer.

486SLC-25 with 4 meg ram
Built in 640x480 LCD
internal 30 meg HP kitty hawk drive
built in 2400 baud modem/9600 fax
built in ethernet port (10 base T)
oak super vga video port, parallel port, serial port
floppy/ide port, keyboard port and power hookup.
has cordless pointer that works like a mouse
unit is 8 inches by 6 inches and has plastic hard cover
and case which holds an external keyboard (small). Has
external attaching floppy drive (1.44) and i built a
cd rom cable for it. Also included will be an
external 14.4 modem.

includes windows 3.1. I have run linux and windows 95
on the machine with the use of a zip drive.

send replys to destiny@digital.net

point taken Stephane. I only mentioned that though because Sinclap
has a tendency to defend himself by trotting out his "First Amendment"
argument when things are looking at their worst (ie he's losing an
argument).

>Although I don't mean by that, that I want to defend sinclap. I've never

30. Any interest for Emagic "Notator" newsgroup?

Newsgroup: comp.sys.atari.st
Date: 1997-04-01 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <33406950ac9ea4@sn.no>
Source record: 124794
Cross-posted to: comp.sys.atari.st,rec.music.makers.synth

I'm trying to get something started regarding discussions around the Atari ST based sequencer programs "Notator SL" and "Creator SL" and I'd like some feedback prior to doing that...

Note: I'm not talking about "Notator Logic"- users of this program have their own mailing list!

Anyway, I've been trying to find out how to get a newsgroup or mailing list started, but before I decide anything at all I'd like to get some feedback on how many people would be interested in something like this, and if a mailing list or a newsgroup would be appropriate?
Please mail me back so I can get some sort of indication.

I've been in touch with several Notator/Creator users on the net who all miss some kind of discussion area, where we can exchange ideas/experiences etc.

The newsgroup idea came when I came across the "alt.steinberg.cubase" group, so I thought to myself- "Why not create 'alt.emagic.notator.sl'?"...

I don't know about all this explaination for leap year calculation but :

1/ Netscape Calendar (no booing please) *does* have a Feb 29 2000.

2/ Window's Scheduler+ (BOO HISS...) also have a Feb 29 2000.

3/ Doing a cal 2000 on Unix... Feb 29 is there, a Tuesday.

I don't believe 1/ & 2/ but I have to believe the Unix OS.

Sorry, but they shut down to be able to do more as a family I guess. I got some of the stuff from there close out sale. To bad.

But, if your looking for other cheap sources of stuff, Contact Cee-Jay Software also in IL. If your interested, let me know and I'll pull up there address and phone #.
I've dealth alot with them and enjoy using them. Great prices and they stand behind what they sell pretty well for used software/hardware.

>then the Cab/cab-for-mintnet overlay combination.

I agree. The cab-for-mintnet overlay has at least two problems you may run into.
1. You cannot respond to an e-mail address defined by a mailto: tag.
2. The mintnet overlay does not insert your e-mail address into the password when following an ftp link. Some sites, cnam for example, will refuse to allow you on unless you use a real e-mail address.

I use a Falcon and have been unable to use any version of CAB.OVL after 1.20h. I suggest you get this version at least until you have CAB working.

If you all folks have fetched the CAb demo from Mille Babic's homepage, it's the real demo-version. I've got it from ASH and Behne-brothers myself at CEBIT this year (a demo disk that labelled CAB-DEMO 2.0).

best regards

Ronny

PS. They have never heard of HADES or PHENIX, they run MagicMac on PowerMac with a 200 Mhz 604e, but my friends HADES060 seems to be faster, at least with Atari-prg DS.

As far as I know Big-DOS has to be the last program in the AUTO folder,
at least when you use the current version BIGDOS08. I'm not absolutely
sure, though.
If you have a Falcon use BIGDOS06 instead of BIGDOS08. For more
information contact Rainer Seitel, author of Big-DOS:
Rainer_Seitel@ka.maus.de.

Wow... just in time for my birthday... how nice! =)

LOL!

Will Fisher

BTW: Yes, it *is* actually my birthday today, and no I don't buy this
press release! =)

>This SIMMs were running OK on my old PC...
>
>Simon.

Maybe 2 of those SIMMs weren't 1Mb, but 256Kb (the ones fitted originally in the STe were always 256Kb). In that case you had 2.5Mb and experienced the 2.5Mb bug. This happened to me once. There's a AUTO program called simmfix on most FTP sites but it doesn't always work. I finally had to remove the 256Kb SIMMs.

Another explanation could be that you may have mixed parity/no-parity SIMMs. I've no experience on that.

>#
>##########################END OF DEFAULT.CFG##########################

Well, I don't use Gluestik, but you need to add this to get MAILTO to work:

EMAIL = Martin.Byttebier@ping.be
SMPT_HOST = ping.be (Host Name, could be something else)

In CAB you must put this in the Options-Server/Proxy:
SMPT server: ping.de (Host Name again)

As mentioned above your ALLOCHEM seems a bit small. You might try 100000 or
more if you have enough RAM.

If the above solves your problem, you might try expanding your MTU>RCV_WND:

MTU = 1152
MSS = 1112

```
PKT_SIZE = 1152
DFB_SIZE = 6000
RCV_WND = 5840
```

This doesn't work for everyone, but it's fast on the earlier STiK's.

>implement this version at my homepage?

Hi Mille,

I, for one, do appreciate your posting of the new CAB Demo, so please
continue. We all learn from the experience. I should have posted this
in my original post.

Digital Reseach Browser Tester says:

The NewlineChar test determines what character is used, in the query,
to represent a newline character in a <TEXTAREA> When forms were
first specified (in Spring, 1994), the newline character sequence was not
specified. Browsers used \012 (Linefeed), \015 (Return), and CR-LF.
Scripts that assume a particular newline character (e.g., if the input
is passed to another program) are likely to get unexpected results.

Since then, the HTML 2.0 specification has adopted the standard
representation of newline to be CR-LF - the character pair \015\012.

The test case looks like this:

<TEXTAREA ROWS=2 COLS=20 NAME="NewlineChar"></TEXTAREA>
The user is instructed to type a RETURN character.
The results indicate what is used in the query for the RETURN.

OK = Browser uses CR-LF, the correct newline sequence.

CAB2.0 = Browser uses LF in <TEXTAREA>
LF is used, instead of CR-LF

All previous CAB versions DID use CR-LF. This could be causing some
problems with the new CAB. If there is a new version of the CAB Demo
please let us know :)

Charles

48. * Atari ST system for sale! *

Newsgroup: comp.sys.atari.st

Hello. I am considering selling my Atari ST system which consists of the following:

* Atari SC1224 colour monitor
* Atari 520 STfm (upgraded to 1040 STfm)
* 30 meg HD in large case with room for upgrades
* SupraModem 2400bps
* Panasonic printer (it is in the other room so I'll get back to you regarding the model)
* TONS of software (literally!) A gazillion games!
* Joystick, mouse
* Storage cases for disks
* Many many British computer magazines such as ST Format, Ace, Zero (a wonderful mag, full of notorious British wit) etc....

Please reply via e-mail if you are interested. Thank you:

Daniel

I've got it and will part with it. It was part of the software
originally supplied with my STE and comes on a single disk containing
two other games: Bombuzal and Bomb Jack.

How about 3 UK pounds including postage (UK only)? Three great games for
three quid! What more could you want!

Well you'll probably want a box and instructions but I haven't got them!

Reply by email if interested.

John,

I lost your original article so don't have your email address to hand so
I hope you see this!

I have a couple of SCSI internal hard drives just waiting to be put to
good use. I can't remember the exact make/model etc (they are back at
the office) but they are both approx 300 mb.

If you decide to replace your existing drive I can let you have one for
50 UK pounds plus postage.

email if interested and I'll let you know the full spec.

Hi All,

Thanks a lot for all the advice you have been giving me, unfortunately my ST still doesn't work.

On another subject, a friend has given me a new 520 STFM with a 'rainbow' TOS. This works perfectly but has thrown up another problem, a lot of the programs I want to run do not work properly and the graphics muck up, is this a problem with the TOS version, can I swop the TOS versions from my STFM with a knackered disk drive into my new working STFM or can I swap the disk drive (they seem to have different connectors??

I would again be most gratedul for any help..

Best Wishes

Ant.

If I remember well, that was a cool little 8086 PC emulator. It also had
a cool feature: it used it's own RAM, so you could run the ST and the PC at
the same time. You could also use the supercharger as a permanent Ram-disk
(until you switch it off!).

I don't have the software though...

What's the use of me compiling a Quick FAQ if people don't even read it.

PC and Atari disks are basically compatible. See the FAQ for more details.

As far as I know there is no such thing as a system disk for Atari (except for the very first STs with TOS 1.0 on disk). TOS is in ROM, so you can boot with any old formatted disk. If you don't have a formatted disk, you can boot without a disk and wait a few minutes for the desktop to come up. Then you can format a new disk with the desktop menu.

If you are talking about the software that came with the machine, I'm not sure exactly what it was for the Falcon, but the ST 'language disk' stuff was mostly useless, except for control.acc which can be nicely replaced by xcontrol.acc on all machines. This can be found an all the major FTP sites.

Does anyone know what exactly came with the various language disks?

My first STFM had
-control.acc
-logo.prg (a useless logo interpreter)
-stbasic.prg (a useless and buggy GEM basic)

My STE came with
-control.acc
-omikron basic, which was a major improvement

What about other machines ?

65. MegaSTE keyboard...help !!

Newsgroup: comp.sys.atari.st

Hello, I'm Jose:

My MegaSTE has broken down and I have thought to use its pieces in my
other STFM or PC.

So, I have setup my old 1040STE with the memory of MEGASTE but ..

Could I connect the keyboard of MSTE to STE or PC ??

Anybody can help me ??

Thank you for all ...

I'm running Linux on a TT. I'm running ppp and a Web server. It works
great. Look on tsx-11.mit.edu in /pub/Linux/680x0 for everything that
you need.

The Falcon's system disks came/come with Breakout, CalAppt, Landmine,
ProCalc, Talking Clock, Audio Fun Machine, Falcon D2D, System Audio Manager
(SAM), various sounds, an installation program, XControl 1.2, various CPXs,
AHDI 6.06 (and accompanying programs), Lines, MultiTOS 1.x, Atari Works 1.2,
and SpeedoGDOS 4.x. As for sending these files, I'm not sure about the
legality of doing so. If anyone can tell me for sure as to whether I can
send most of the system disks (obviously, I wouldn't be sending MultiTOS,
SpeedoGDOS or Atari Works, as these are most certainly commercial programs),
then I would be happy to set up a web page for the two Falcon owners to get
the files from. (I must say though, Atari did load the system disks for the
Falcon to the brim, didn't they? :))

Hey.. It could happen..

Im still a loyal atari fan, although my ST doesnt get much use
anymore. In fact, when I moved to the bay area to work at
Netscape, one of the first things I did was to head over
to what was it? '1196 Boerregas Ave'? The old Atari
headquaters. It was a somber sight. The building is
really cool looking, but its deserted.
You can see the weather marks where the huge fiji Atari
logo's used to be. *sob*

Here's a question for you guys..
Do any of the following exist for the ST? :
1) ethernet cards/drivers
2) TCP/IP stack
3) X windows Server
4) A web browser or email client ?

It is true, and there's a couple of good reasons why what you're saying
isn't the case.

1. They've already announced that they do plan to continue building and
developing Amigas.

2. They're in contact with a number of Amiga-related developers and
companies now towards that goal.

3. Quite frankly, there wouldn't be a lot to be gained, except perhaps an
easy way to get NTSC/PAL video, by putting the Amiga AGA chipset into a
PC. Your average PCI video card blows away AGA's raw graphical
performance.

Oh boy, this old tired chestnut again. Why not do things like the old Spectrum owners do and make old software available if no one still sells it ? If the legal copyright owner objects, simply delete that title from the lists and add the title to a FAQ detailing all software which cannot be distributed freely.

Reading about the pros and cons of piracy is pretty boring (we've seen it all before) so I have a simple request of the hardened pirates out there. Do what you like in the privacy of your home or amongst your circle of friends but could you _please_ keep your activities off public forums such as the Usenet ?

Thanks ever so much.

>>

>If this is true, they probably only wanted the multimedia technology, ala the
> custom chipset, for their WinTel machines.

What multimedia technology ? The custom chipset has been a millstone around the Amiga's neck for years and most serious users have bought graphics cards to act as a much faster replacement. Wintel technology, awful as it is, has been able to handle MM much better than the Amiga chipset for some considerable time. The only way Gateway2000 can make money out of the current Amiga technology is if they produce an "Amiga on a card" cheaply enough to tempt all those who defected to Wintel to add this to their current machines.

The real assets of the Amiga are the operating system and the loyal following - and I even include some of those aforementioned defectors here. But for CBM's mismanagement and resultant bankruptcy AmigaOS would still be the best OS on any micro. That this isn't the case is due purely to five years of stagnation and confusion while its rivals have moved on. Gateway2000 have the perfect chance to work with companies like ProDAD and produce a platform independent Amiga-like OS that could finally provide a viable alternative to Microsloth Windoze. This is not a joke as ProDAD have independently been working on such an OS already, and companies would be quite keen to develop for a market where they don't have to compete with M$ all the time. Of course, there already is a platform independent OS available in Unix/Linux, but something much more user friendly and accessible is needed if it's to make an impact in the mass market.

Finally - as I really _must_ stop wasting your bandwidth - I urge all those who are interested to support Gateway2000 and let them know that there is a market out there if they play their cards right. I also urge those who couldn't care less to stop making snide and ill-informed comments until more details are published so that at least their criticism can be more specific.

Oh, and there's no reason to put your ST's back in the closet. The ST isn't dead as long as people are still using it.

The Amiga is not dead. It's just resting.

A > of the programs I want to run do not work properly and the
A > graphics muck up, is this a problem with the TOS version

Could be; rainbow tos 1.04 is known as a 'game killer'. Lots of
games written in 1985-87 used 'cheats' that rainbow won't tolerate.
But I suspect that you are running out of ram.

A > can I swop the TOS versions from my STFM with a knackered disk
A > drive into my new working STFM or can I swap the disk drive
A > (they seem to have different connectors??

Either way should work; but I would be tempted to try getting a good
disk drive into the higher memory machine - and if you want to play
old games, keep away from rainbow. If you can skip the old games,
rainbow is well worth having.

83. Mintos and lowercase filenames on Falcon030

Newsgroup: comp.sys.atari.st
Date: 1997-04-02 00:00:00 UTC
From: Mike & Wanda Saeger <wanda@starnetinc.com>
Message-ID: <3342A133.75DF@starnetinc.com>
Source record: 124697

I installed the PPP kit on the internal IDE hard disk on my Falcon030.
After Mint started up, all the filenames on my C: drive were in
lowercase.

The operating system doesn't recognize programs (.PRG, .TOS, etc.)
that are in lowercase as programs.

Is there a MINT parameter I should be using to get my c: drive
files back to upper case?

>Do any of the following exist for the ST? :
>1) ethernet cards/drivers
>2) TCP/IP stack
>3) X windows Server
>4) A web browser or email client ?

Hi Josh,

>1)
We have had Ethernet cards and drivers for years, until recently they have just been too expensive. There is a German developer working on a low cost Ethernet solution via SCSI for the Atari system. It should be ready soon I would think.

>2)
A solid TCP/IP stack is with PPP is soon to be released by Oregon Research in, you guessed it!, Oregon. It is called Termite. They also have several clients in the works, Termite Mail, Termite Telnet, Termite FTP which will be shipped with Termite TCP/IP. Termite Mail Pro, termite Telnet Pro, Termite FTP Pro, Pro Client Pack and Termite News will be available shortly after. Sounds like these "Pro" versions will just be upgraded versions of the included clients with Termite TCP/IP. target Release is May 1997 or earlier.

We already have other PD, Shareware, Donationware etc, solutions for TCP/IP. STiK is the most commonly used. STiK has support for SLIP and limited C-SLIP under TOS and if you use MiNTNET, you can have a PPP connection fairly reliably.

>3)
The X windows server can be handled by running Linux, A TT030 (in my

opinion) is the minimum system for Linux on Atari.

>4)
We have an excellent web browser called CAB. Up till now it has been Freeware/Donationware. v2 will be the first commercial release and there is a demo of it floating around out there. It supports "most" of the HTML 3 specification, frames, tables, animated GIFs, forms etc.

There is another web browser called WebSpace and a demo of this exists out there as well. It is a commercial offering and I am not sure if it is available yet. It is by OXO Concepts.

There is also an offering called OASIS which supports PPP, the web browser is not finished yet though. It has mail etc. already implemented.

There is a compilation put together by the Toronto Atari Federation (TAF) that allows you to run Mosaic under X windows under MiNT. I know of several people using this and happy with it. It requires a lot of horsepower though!

With Linux, running an X server is no problem. If Netscape can be talked into releasing binaries for 68k Linux, I am sure somebody will compile it!

We have several other clients for mail, news, FTP etc. available in PD/Shareware. Antmail, Newsie and MG FTP (I may have that name wrong) and a Telnet client (name escapes me at the moment) are all excellent examples and available on the net for download.

Many of the above clients and STiK will run on even the slowest 10 year old 8MHz 68000 Atari ST with 1MB RAM and a 20 MB Hard Disk. An amazing feat when you consider it!

All the best,
Chris @ Computer Direct

I have an opportunity to purchase a Stacy 1 for $300 Canadian.
What I need to know is:

* What is required to retrofit an internal HD?
* What is required to install TOS 2.06 and 4 Mb of Ram?

Finally, I need to know where I could find copies of Atari's
service manuals for the TT and Stacy, so I can understand DIP
switch settings and Memory upgrading procedures better?

>owners to get the files from.

I believe all of the other files are already available from major ftp sites,
so I see no reason you couldn't collect them all in one place. MT, Speedo,
and AW are all available commercially, and while I would personally
recommend NVDI over SpeedoGDOS, anyone who's really interested should hit my
"vendors" page to locate someone relatively local to them (e.g., same
hemisphere) and inquire about pricing. Frankly, I haven't been all that
impressed with MT on my Falcon - but it's tolerable on a TT, so once I can
get Nemesis, perhaps it will be nice on the Bird as well.

No, I'm not Sanford Wallace - just baiting the spammers. <G>

eeerm just a point of interest, The stik package, CAB etc, will work yes on any old ST with one meg of memory, and although a hard drive would enhance the experience it is certainly not needed?,

I only add this point to assure possible users that you can get on the internet with any old atari and you dont need to go to the expense of having a hd installed, although i dont use this system now, I did for an absoloute age on a FM Tos 1.02 with only the Drive A? and one meg :))

>.ZIP files?

STZIP comes with a program that turns the zip into a self extracting
archive, it has been proven that damaged zips made into a tos file,
will extract perfectly,

Of course this depends on the extent and type of damage, but I always
run a damaged zip through this process before discarding it and it has
a high success rate :)

It's not very hard to crash either. Took me about 1 minute with a test
page I had done with frames. Other than that, it does look very good
and formating tables are much faster.

>numbers, new versions of INN may fix this loophole.

If I correctly understood the piece of INN 1.5.1 code I've seen
commented in a French newsgroup, it's already done. BTW NOS can't use
article numbers, just message-IDs. In commands "ARTICLE <message-ID>" if
there is no kill file, "HEAD <messID>" and then perhaps "BODY <messID>" if
a kill file exists.

Do you know if like someone said me all these commands are slowed down
(by default) or only "ARTICLE"?

Bye! Bruno.

108. ST games (+ other stuff) for sale (UK)

Newsgroup: comp.sys.atari.st
Date: 1997-04-02 00:00:00 UTC
From: conan@enterprise.net
Message-ID: <3342541c.98974@news.enterprise.net>
Source record: 124722

I still have the following Atari ST games and stuff for sale:

Excellent games: (5 quid)

Chaos Strikes Back
Lords of Chaos
Bloodwych
Bloodwych (data disks)
Drakkhen

Really good games: (4 quid)

Battle Master
Sim City
Sleeping Gods Lie

OK games: (3 quid)

Castle Master
SDI

Cheap games: (2 quid)

Vindicators
Phobia
Deja Vu

Other stuff: (Make me an offer)

Atari ST: TOS Technical Reference Guid Book
STOS game creator
2 x Quality Midi cables (8 foot long)
ST 2 TV Scart lead
ST hard drive extension cable
Quality Printer cable (4 meters long)
4MEG zram upgrad kit for 520STFM/1024ST (damaged, but chips might be
of some use to someone?)

Postage to be aranged.

Thanks! :)

Or perhaps it's a prophecy! Netscape for Atari will be done on either
April 1st or January 4th (depending on which country you live in) in the
year 2007!!! What a deal!!! I can't wait!!! ;)

>Actually, there *is* no Tuesday 29 February 2000, last I knew. Leap years
>normally happen every four years, but not when the year is evenly
>divisible by 100.

You forgot the third rule, which says a year is leap if divisible by
400. So if 1700, 1800, 1900 or 2100 are not leap years, 1600, 2000 and
2400 are...

So a C macro could be:
#define isleap(y) (((y) % 4) == 0 && ((y) % 100) != 0 || ((y) % 400) == 0)

Another leap year bug? The system clock (gemdos soft clock and "TT"
nvram clock chip) thinks wrongly there is a 29 Feb 2100.

Bye! Bruno.

The MessagePad 2000 probably gets rid of the speed problem. I don't know
if the accuracy has been improved.

Ok, ok, I got it already!

It has all the right functions in it, especially the cancel button and boot over to TOS. The only trouble with it is that it seems totake an age to decide it wants to close everything down. A bit spedier in that department and I'd be happy.

Glad it's got an English version.

I also took the time to pick up Bubble02 and the Doshut accessory (to access shutdown while single-tasking with Magic, where the Shutdown menu option isn't available). All very helpful!

Hi Katherine

where did you get GlueSTiK V0.02b4 (I think it's brand new)?

4 weeks ago I tried to use STiK 1.12 and lost the game.
Then I installed PPPKit1.4 and the first attempt of dialing in
to my provider was successful.
I used DuFTP to download GlueSTiK 0.02b2 (forgot the source) and now NEWSie
works fine, too. But I have little problems using the Shell-Scripts
on my Hades. SH.TTP doesn't work on it.
So I copied TCSH.TTP to SH.TTP and SH (used by the scripts).
To see what happens during log in I type 'pppd file /etc/connect'
directly in the shell. After exiting the shell I can use the GEM-clients.
But how can I disconnect in a correct way?
'pppd file /etc/disco' won't work.
Till now I always deleted the ppp-daemon from U:\PROC and the modem
hangs up.
Is it necessary that MiNT-Net is installed on a Minix-Partition ?
Anyone who knows a good MAN-page reader for getting more information
of the MiNT-NET clients?
Or an overview of the clients and what they are good for?
(for MiNT-NET beginners)

Isn't anywhere a GEM-programm (ACC like STiK) for dialing in to the providers
to avoid a command line shell.

My other problem is to install XaAES. XaAES stops during booting on my Hades. But it won't run on my old ST too! So I don't think it's a Hades-compatibility problem. Is anybody able to send me a working mint.cnf and xaaes.cnf ?
And what programms I need additionally ?

Many hints and tricks would be appreciated

bye
Markus

Badly needed:

8 or 10 meg ST-Ram board
and
8 or 16 meg TT-Ram board

Please only US/Canadian offers, as international purchasing causes too much trouble for payment and customs. specify the currency of your quotation and your country and state/province of origin, so I can estimate delivery/currency costs.

127. Problem with C-Lab Creator

Newsgroup: comp.sys.atari.st
Date: 1997-04-02 00:00:00 UTC
From: JoHS <NOSPAMjohs@mycroft.no>
Message-ID: <01bc3f3e$744914c0$7164a8c0@johs.no>
Source record: 124769

I'm new to this group, and also unfamiliar with the Atari-world, but I have an Atari and I have a problem. Hope that will qualify a post :)
I've got myself an Atari 1040STf and an Atari SM120? b/w monitor. I got it primary for midi-use. I wanted a hardware-sequenser (Roland MC-500 MkII?) but got the Atari for half the price.
The problem: Creator won't save files to any other disk than the "program"-disk without failure (total hang/White screen). A power off is needed to get the system up and running. Since the space left on a 720k (on top of the program) won't let me save more than 3 or 4 songs, I've used to make copies of the program-disk when I need more space.
Do I have a problem with the program itself or is this a TOS-problem?
Is it possible to upgrade some of it in an easy way? (If this is necessary).
What's the new name of the C-Lab people? Audio XXX?
I don't know the TOS-version or the C-lab version, but I'll try to find out what it is if that is necessary for you to help me out.
Thanks in advance,

Thanks for the help,I have the drive installed and running great.I
installed it using a home built mount which seems quite sturdy,it certainly
boots a lot faster from the internal drive than from the external
scsi,which is great as I hated having to have a disk in the floppy drive.

Rob.

->> Do you know why? This SIMMs were running OK on my old PC...
DG>
DG> I find it hard to tell if SIMMs are really seated in their
DG> sockets. Just something to double check.

Absolutely a thing to check up. The SIMM sockets in some STe's are of very poor
quality and should never have been placed in a computer! Some machines have bad
sockets that need to be replaced after exchanging SIMMs only once or twice :(
But first of all you should try cleaning the sockets with a fibre-glass brush -
DON'T use any spray as it will only leave stains on the contacts and cause even
more trouble.
The problem may also be a little more simple: there are in fact many programs
that panic if there is too much memory. In that case, you could try running a
program that sets the RAM size to 1MB after a reset of the computer (I don't
remember what it's called -it's been ages since I had to use it) - it did
actually work very well.

Best regards,

Claes

Hello,

I am looking for people who use the AlberTT graphics card. I am trying to get a feel about how it works, and what the card works with. I was suggested that it might not work with NVDI, since it uses it's own software. Please let me know about this, and other good and not so good things about the graphics board.

Thanks for any kind of comments.

Thanks

Joseph Hogan

135. CAB on the Falcon

Newsgroup: comp.sys.atari.st

From: torbj=94rn.johansson@straight.ct.se
Message-ID: <ftn_2.203.221$fidonet.org_334398b2_Torbj=94rn.Johansson@straight.ct.se>
Source record: 124527

To: rbell@uniserve.com

I am having trouble with running any version of CAB on my Falcon. I've heard that HSmodem and FPATCH2 fix it. But HSmodem will not work.

And when I run GEMbench, every time it checks the FPU, it appears a row of bombs. The guy I bought it from said that there was a 68882 inside. There is also this bootup problem. Is goes tick,tick,tick for about 45 secs and then boots up with the Atari logo. Can it be a faulty powersupply?

Help.....

136. Leap Years on the Century

Message-ID: <d2f_9704040417@tor250.org>
Source record: 124528

```
d@> Actually, there *is* no Tuesday 29 February 2000, last I knew.
d@> Leap years normally happen every four years, but not when the
d@> year is evenly divisible by 100.

FWIW, I've heard that the way they determine whether or not a leap
year should take place at the beginning of a new Century depends on
whether the sum of all the digits involved is even or odd. Eg.
2000 is 2+0+0+0 = 2. 2 is Even therefore the year 2000 will be a
leap year. However, 1800 is 1+8 = 9. 9 is Odd, so 1800 wasn't a
leap year.

Or it's something like that along those lines. :)

140. MIDI file player

Newsgroup: comp.sys.atari.st
Date: 1997-04-03 00:00:00 UTC
From: Oliver Skelton <skelton@gatwick.geoquest.slb.com>
Message-ID: <33442EBE.4C7D@gatwick.geoquest.slb.com>
Source record: 124532

Hi all,

I am looking for a midi file player.

I tried SMR_PLAY and FIMP but they are not what I really want.
(The former will only play one file at a time and even when run as an
ACC blocks other applications, the latter just previews midi files via
the internal speaker.)

I want something I can feed a folder or directory tree to and it will go
and play all the midi files in the background. Presumably such a beast
would be very useful for CAB too.

If it supports 2 midi outs (Logic dongle and SC88-Pro) then all the
better but that is probably too much to ask.

Any answers - please email too as I am not 100% sure I am getting a full
usenet feed (about 50 messages a day).

>
To follow an ftp link with the mintnet overlay, you need an ftp proxy.
Add lines like the following to your mint.cfg file using your provider's
proxies if there are any:

setenv http_proxy http://proxy.win.hookup.net:8080/
setenv ftp_proxy http://proxy.win.hookup.net:8080/
setenv gopher_proxy http://proxy.win.hookup.net:8080/

The corresponding lines for the STiK config file are:

HTTP_PROXY = proxy.win.hookup.net
HTTP_PROXY_PORT = 8080
FTP_PROXY = proxy.win.hookup.net
FTP_PROXY_PORT = 8080
GOPHER_PROXY = proxy.win.hookup.net
GOPHER_PROXY_PORT = 8080
```

This is what I put in my config file for the mailto: tag.

EMAIL = ccook@icis.on.ca
SMTP_HOST = mailhost.icis.on.ca
SMTPSERVER = 205.233.131.2

SMTP_HOST is where I read mail; SMTPSERVER is the SMTP gateway address.

I've e-mailed him and left messages on his stupid voice mail. He never returns calls or answers e-mail.

If anyone knows how I can get this guy, post it here. I'm tired of the scam this guy gets away with.

147. Help!! Problems with 520ST

Newsgroup: comp.sys.atari.st
Date: 1997-04-03 00:00:00 UTC
From: Jeff Thomas <Yanni@ix.netcom.com>
Message-ID: <01bc3fd3$1b823a20$2e90b8cd@default>
Source record: 124627

I need help!! I purchased an Atari 520ST two months ago and did not have power cables for the S354 drives. I purchased two power cables along with a S314 drive. I cant get the thing to load software that I have downloaded from FTP sites. I have saved them on a 720K disk formated with an IBM comp. computer. I heard that the ST can read the disk. Is that so? It did not work!! So I went to the next step.... I have 4 old START mag. for the ST. The disk have never been opened. I tried the disk and got the same message. "0 bytes on disk 0 bytes available". I know these disk must have information on them. I have tried all three drives and the same information appears when I double click on the floppy icon. I know that it has 1.0 TOS built in to ROM. This is the first time I have ever messed with this type of machine. I have a Atari 400, 800, and 600XL but none of those match up to what I think is a computer that was 10 years ahead of its time. (According to what I have read on the Net.) I want to get this thing running. I have read that there are some ROM updates somewhere. Do I need them? Were can I get them? Does the 520 read IBM disk? If not, how do I download stuff off the Net to work on the 520? Any help would be appreciated.

Thanks, Jeff

Good point! I never considered running STiK, CAB on a floppy system since
the HTML pages with Graphics would probably fill what was left of a 360K or
720K floppy, not to mention the speed. I suppose one could do this, it
would be painful though I would think.

Source record: 124635
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st,comp.sys.atari.st.tech

I'm porting a great Atari ST program to Windows95 and have no
Atari ST documentation. The source code #include's aes.h, vdi.h
and tos.h, it would be useful to have these and some documentation
on the windowing system and graphics routines.
Who could send me those?

Thanks

Wouter

: I have NVDI v4 along with a Epson Stylus colour 200 printer, i have yet
: to find NVDI or anything that will print at 720dpi though. I have tried
: a few prgs so far, but still nothing happens, the paper is fed through the
: printer but that is all, it does work at 360dpi though, if that's any help.

: ATB..Dale :-))

Odd problem, as NVDI 4r6 works with my Stylus at 720dpi.

In fact I do remember replying, My newsfeed sometimes acts a bit strange
so that might be an explanation.

I said that your offer was welcome. I could do the HTML conversion myself
but the web space would be welcome as my own is currently full, and not at
all Atari related. This will only come as the FAQ gets to a final stage. I
still need some questions answered before I goet to that though.

Sorry about the non-response.

Just a little question:

What's the difference between software that was included with the machines and the infamous TOS images. If there is nothing clearly specifying that XCONTROL.ACC and all the other stuff could be freely distributed, then I suppose it shouldn't. However it is.

I don't want to start another TOS piracy debate, but I don't really see what makes the difference.

I seem to remember trying to change 50/60 Hz by changing the value in a register (FF820A I think - don't quote me on that). It had no effect, where as on a real ST, it will toggle 50/60 Hz.

It's possible this is not implemented on PACIFIST; it also cannot handle some other types of screen effects yet.

Do you know how to install a VBE 2.0 driver for raster effects. I have one that came with my ATI card , but I can't see any effect when I press F1/F2?

->ProCalc, Talking Clock, Audio Fun Machine, Falcon D2D, System Audio Manager
->(SAM), various sounds, an installation program, XControl 1.2, various CPXs,
->AHDI 6.06 (and accompanying programs), Lines, As for sending these files,
-> I'm not sure about the legality of doing so. If anyone can tell me for
-> sure as to whether I can

Just wondering, but what if I bought a PC, and the HD crapped out and I
lost everything. Then my friend comes over and we copy DOS and Windoz to my
new HD. Is that legal? Did I not pay for DOS and Windoz when I bought the
PC?

->send most of the system disks (obviously, I wouldn't be sending MultiTOS,
->SpeedoGDOS or Atari Works, as these are most certainly commercial programs),

Whats the difference between those 3, and the other programs listed ? Are
the others freeware? Or a better question would would be, "How could Atari
package commercial software with their Falcons?". This is a hot item with
me, as I didn't get anything when I bought my used Falcon, not even the
manual.

Don't have a cow, man; its not your fault.

->then I would be happy to set up a web page for the two Falcon owners to get
->the files from. (I must say though, Atari did load the system disks for the
->Falcon to the brim, didn't they? :))

Thanks, if its legal count me in!

AFAIK Atari released all those programs. TAF has had them on their BBS
for a while now. However SpeedoGDOS, AtariWorks, and MultiTOS have _not_
been released by Atari. Atari couldn't release Speedo in any case as it
is not their program to release. As to how Atari could pavckage
commercial
software with their Falcons, wellll... how can IBMclone dealers sell
Microsoft, Lotus, WordPerfect, etc software on the hard drives of the
systems they sell? simple: they buy a licence. In Ataris case they would
have had to only buy a licence for Speedo, as the rest of the software
is
Ataris. I also purchased my Falcon used, but managed to get all the
software
and manual form the original owner (thanks Kevin!)

> Thanks, if its legal count me in!

Has anyone compared files after copying with Kobold? (or any other
copier for that matter).
Yesterday I copied 4,000+ files to an empty partition, and when I
compared the copies to the original using Tree Check(or check tree?)
I had 7 mismatched files.
Is that an acceptable error rate(~1/10th of 1%), or should I be
looking for 0%?
any experience with this?
I am going to try it again, this time with Uwe Seimets HD Driver
"SCSI Verfiy" turned on.

: which an overpriced atari clone doesnt!

A Hades owner certainly gains my admiration... but I think we
choose the computer plataform to enjoy using it (as I think I would enjoy
driving a Rolls) and not to impress anybody... This is a personality
disorder of people that try to get the admiration others based on what
they can get and not on what they _are_. Sadly this is very common in a
consummers society like ours, and people keeps buying the faster thing
around just to enjoy five seconds of glory when it show to his peers that
now he is running a 26 Meg wordprocessor at decent speed instead of the 14
Meg one with a sandclock in the screen (very impressing :-)).

Here a quiz... what is the computer plataform that need to show
the processor speed in the front of the box because otherwise you think
the dealer stole your money and give you a very slow one? (and certainly
after spend a lot of money to support the Gate's cruzade, you cannot
impress your peers?)

Well... is time to move this thread to advocacy...

Regards.

Daniel.

Does anyone know the limit on the number of files in a directory/folder?
I am getting wierd stuff happening with my acc's and cpx's.
For example I can see cpx's in my directory(on a different drive) and
xcontrol will see *some* of them, but not load them. Freedom2 demo only
sees very few cpx/z's compared to what I can see from the desktop.
For acc's I can't see some acc's that I just copied to my acc directory!
Sooo, I was thinking that I had too many acc's and cpx/z's in my
folders, passing some theoretical limit on the number of entries per
directory.

:
: that's beside the point. I don't see how it can beat MS Windows, in terms of
: market share, so if anyone buys Amiga because of that better think twice.

Plainly enough, it can't. What's happening is that the computer market
is starting to shift to recognize something we (Amiga, Atari, and others)
have known for years--that there is a market for alternative platforms
which will never challenge MS Windows for market dominanace but can exist
without that dominance all the same.

Think of it as being like Plank Road Brewery. Sure, you know they're
owned by a mega-brew company, but they're marketed smaller, to appeal to a
smaller segment of the marketplace.

I finally managed to access the Web, using Cab-Stik, and successfully
downloaded OASIS v210 from WWW.YEADONTT...., thanks Phil.

I carefully unpacked it into a clean and empty partition.

BUT, every time I attempt to run ICE_NET it gets as far as the window menu
then HANGS.

I am determined to make this software work!!

So practical solutions only please, not alternatives.

My hardware is ATARI 1040STFM, TOS 102, 4meg RAM, 250meg Hard Drive,
Mono Monitor etc.

Here's hoping and thanks

Denr

I have, or had uvbi fingy installed?, whith this installed pressing
f2 will bring up another box that lets you select resolution and
colour, 800x600x256 and more are in the list, but i couldnt get any
resolution other than normal atari ones,

i uninstalled the vbe driver as it was on 30day trial demo ?, and
pressing f2 got nothing? plus i didnt see any change in anything, with
or without this driver?

: Just wondering, but what if I bought a PC, and the HD crapped out and I
: lost everything. Then my friend comes over and we copy DOS and Windoz to my
: new HD. Is that legal? Did I not pay for DOS and Windoz when I bought the
: PC?

With your PC, you will receive a CDROM or multiple disks for which to
reinstall DOS and Windoze, if it becomes necessary. In fact, most PCs don't
get the full version of Windows, but an OEM version that would only work for
that particular machine (i.e. set up specifically for the features found on
that machine), so you're taking a chance in installing a set from someone
else. However, it is not legal for you to install someone else's version.

: ->send most of the system disks (obviously, I wouldn't be sending MultiTOS,
: ->SpeedoGDOS or Atari Works, as these are most certainly commercial programs),

: Whats the difference between those 3, and the other programs listed ? Are
: the others freeware? Or a better question would would be, "How could Atari
: package commercial software with their Falcons?". This is a hot item with
: me, as I didn't get anything when I bought my used Falcon, not even the
: manual.

The difference is that those are still commercial programs, available from
reputable Atari dealers, and to use your PC analogy, just because Compaq
includes Windblows on a friend's PC doesn't not mean it's freely
distributable. All three of those programs were owned by Atari Corp., and
were sold to private concerns after the initial release of those programs
with the Falcons. Not all Falcons received that package, not even if they
did get the 85 meg HD, only the 'first' Falcon owners.

: ->then I would be happy to set up a web page for the two Falcon owners to get
: ->the files from. (I must say though, Atari did load the system disks for the
: ->Falcon to the brim, didn't they? :))

: Thanks, if its legal count me in!

I will put the files I am allowed to on a home page for those of you who
want it, and after doing so, I will leave a message on here.

Leslie

To:
comp.sys.atari.st

Does anyone have a 1040st that they want to sell?
I am only looking for the computer, not the monitor etc.
But please contact me anyway. I might change my mind.

Mine caught fire. Guess that's a bad sign :)

I live in Toronto, Canada, so I would prefer one from my area
in order to minimize shipping costs etc.

thanks

Stuart Simpson

189. CoSTa 2.10 released

Newsgroup: comp.sys.atari.st
Date: 1997-04-03 00:00:00 UTC

```
CoSTa version 2.10 is now avaiable from my web pages (see .sig).

New in v2.10 is TeddyTERM support and several bug fixes.

CoSTa keeps track of all phone calls made by:

NOS
ICE
MiNTnet
CoNnect
CixComm
STiK (via STiKtime and the STiK dialer)
Semper
TeddyTERM.

For further info on CoSTa (and a list of the changes in v2), visit my web
pages.

Regards, Gary

F2 changes the resolution used for displaying the Atari screen,
not the resolution used by the Atari.

> i uninstalled the vbe driver as it was on 30day trial demo ?, and
>pressing f2 got nothing? plus i didnt see any change in anything, with

Enable line-oriented mode with F1 and you'll be able to use
software that changes the palette on a line-by-line basis (e.g.
most demos and many games).

> 1st of APRIL !!! need i say anymore!
> From David

Actually, just because it originated in Canada doesn't mean you can take
it for granted that the month-date-year is the format used. Most people
I know use date-month-year cuz it makes more sense. Then again, most
people I know use Metric too!
there's just no accounting for who I know. :^)
Then there are Americanadians though who insist on using US measures
(i.e.gallon=4 quarts, miles, etc)or English Canadians who use Imperial
measure (i.e.gallon=5quarts, miles, etc) and these also tend to use
month-day-year. There's a certain glory in being out of step with 3
billion people(the rest of the world) I suppose. :^)
So in Canada, the only dates you can be sure of are those starting
on the thirteenth(13) of every month.
C'est interessante et c'est fou

Silly? Almost as silly as replying to a post and getting all high and
mighty about a reply that wasn't even directed at you!.

>>>Long Jogn Silver

>> ho look, a real name?

I used this moniker in extreme sarcasm...if you read my original reply
with a even a second-grader's comprehension, you should have picked up
on that. Unless you're very dim-witted, of course. .

>Oh boy, this old tired chestnut again. Why not do things like the old Spectrum
>owners do and make old software available if no one still sells it ? If the
>legal copyright owner objects, simply delete that title from the lists and add
>the title to a FAQ detailing all software which cannot be distributed freely.

>Reading about the pros and cons of piracy is pretty boring (we've seen it all
>before) so I have a simple request of the hardened pirates out there. Do what
>you like in the privacy of your home or amongst your circle of friends but
>could you _please_ keep your activities off public forums such as the Usenet ?

>Thanks ever so much.

Don't thank me, pal. I didn't post my reply to entertain or enlighten
anybody. I just hate when holier-than-thou windbags post nonsense
concerning FBI raids and whatnot. I also appreciate your info about
sharing pirate software between my friends. What a concept! Why
didn't I think of that? You make trading software sound like passing
around some kind of electronic hash pipe on a floppy disk!

I am also not a "hardened pirate", as you chose to label me - I'm just
interested in some old software, that's all. Excuse me for intruding
on your public forum - I feel terrible. I realize that after reading
the many thousands of Usenet posts which actually contain some
valuable piece of information, your whole day must have been ruined
after reading my original post. Oh well....that's the great part. I
can sit here and spout off for no reason and someone will STILL take
the time to 'correct' me.

Side note - as a former President of two 100+ member Atari users groups, let me tell you that every person I've EVER met who owns an ST has had more pirate software than store-bought software. I guess most of you guys on this newsgroup are the exception to this. I'm sorry if I've offended anyone on the group, espescially the people I've talked to via email. But to the author of the piracy how-to above, well sir, we obviously have nothing in common - intelligence included.

Have a good day,

Greg

Try reporting your trouble to the State Attorney General where the business in question is located. They might even be on the WEB. Also you may have a locale 'Consumer Affairs' Office in your neighborhood. See if they can give you a hand. Sometimes all it takes is an 'official letter' from one of the above mentioned to get the ball rolling. Good Luck! -DF

Actually in Canada nobody knows what it means. Three different people
will give you three different dates: Jan 4 07, Apr 1 07, and Jan 7 04.
Nobody who wants to be understood uses a date like that in the Great
White North.

Package was received in Sweden. This was verified via e-mail. Was
told the check is on the way. This turned out to be false. I waited
a long time, believeing the delay of payment was caused by the
distance between us. After waiting several 'months', with no reply
received from the fellow in Sweden, it became clear that I was being
'stiffed' on payment for the SCSI adapters & software. Oh well,
thank goodness I didn't send him my MEGA STE!! -DF

Good post. Being an old Atari ST/Atari 8bit user myself I will admit that
I had more pirate stuff than I did bought... but I did buy things I used
on a regular basis (Warp9, Ambermoon, etc) in support for the authors.
I still use this same philosophy today, if I use something enough and
enjoy it and it makes my life easier and makes me more productive (or
in the case of games I really, really, really like it) then I will
genrally shell out the $$$ and buy it. I refuse to buy any software that
I have not had the chance to try.

For those who want to argue:

1) You can listen to cassettes and/or tapes before buying them
2) You can try on clothing before buying them
3) You can test drive a car before buying it
4) You can walk around and view a home before living in it
5) You CAN NOT try out software before buying it

A) You can return the CD/Tape at most record stores after opening it
B) You can return clothing to most places if you don't like them
C) You can definatly return a car if you are unsatisfied
D) I don't know if you can return a home... I've haven't bought one yet! =)
E) You CAN NOT return software once opened at all.

So the point being, older, no longer supported software may as well become
general public access... I write to Lucasarts to inquire into porting some
of thier classic 8bit games and was told that I would be more than welcome
to do this but the only thing they could suggest was to go the the
newsgroups
to ask for copies of the games in question (BallBlazer, Koronis Rift, and
The Edilon) because they no longer have any of the information, boxes,
manuals, flowcharts, nothing!!!!!

So copy the old software, and let another generation enjoy all the software
created for some older machines. And please don't berate me with comments

like the ST isn't old or dead... it may not be as dead as the 8bit atari computers but it is soon to be.

Will Fisher

204. Re: UK magazines???

Newsgroup: comp.sys.atari.st
Date: 1997-04-04 00:00:00 UTC
From: agoold@cix.compulink.co.uk
Message-ID: <E83sMx.HB9@cix.compulink.co.uk>
Source record: 124546

In response to michael.mcdermott@zetnet.co.uk's message:
> Are there any Uk magazines still going for the Atari??? --

Atari Computing was launched during the summer of 1996 at Atari shows in London and Birmingham and completely sold out on both days! Delighted by the response we reprinted Issue 1, and increased the print run for issue 2. Both have now subsequently sold out.

Mike Kerslake, the publisher, with over fifteen years experience in the industry has teamed up with Joe Connor, ex Reader Disk and PD/Shareware editor for Atari World, to create this new printed Atari magazine.

So far Atari Computing has featured contributions from respected and well connected Atarians including: Frank Charlton (STF features editor), Graeme Rutt, Jon Ellis, Nial Grimes, Mark Baines, Denesh Bhabuta, Carl L�fgren, Harry Sideras and Kev Beardsworth (Atari World regulars), Colin Fisher-McAllum (42BBS/AtariPhile/FFF), Howard Carson (Current Notes), Xav, Thomas Binder (ST Computer), Al Goold and Ed McGlone (STAG), Roy Goring and Chris Good (WAG), Richard Spowart and Chris Holland (Maggie), Steve Llewellyn (Calamus User), Jim Hornby (Wrinklies), Martin Milner (999 software), Colin Polonowski (Atari Times), Neil Martin, Mark Wherry, Andrew Harvey, David Stevenson, Robert Paton, Thomas Mains, Colin Munro...

We've also signed deals with the two leading disk based magazines, AtariPhile and Maggie to publish regular sections within the magazine. If you've never seen a disk magazine before we think you'll be amazed to find out how much you've been missing!

Atari Computing on the World Wide Web

Frank Charlton, our On-Line editor, has created the new official Atari Computing WWW site at:

http://www.tachyon.demon.co.uk/ac/index.htm

So if you have web access why not pay us a visit and leave a message. There will be a major update with every new issue of Atari Computing, and it provides an excellent taster of what you are missing if you haven't subscribed yet.

Background

The closure of Atari World and ST Format during 1996 left the UK without an Atari specific newstand Atari magazine for the first time

since 1987.

The men in grey suits expect us to move onto other platforms but hang on a minute, let's take stock of the situation...
- Atari machines can be purchased and repaired on a shoestring
- Atari machines can produce superb printed output
- Atari machines can surf the Internet and run BBSs
- Atari machines can form the nucleus of a digital music studio
- New software of better quality than ever before is still being released!

That doesn't sound like a dead platform! The Atari platform has been emulated by just about every other platform, we're owners of cult machines! Have you ever noticed ex-Atarians animatedly talking about the 'Good old days' it's a feel good factor missing from all the current machines.

We don't need a new platform but we do need information and a printed magazine is undoubtedly the best way to ensure we see in the millenium!

Apart from a darn good read the other thing most of us like is some new software to play with. The Reader Disk concept offers all readers the chance to get their hands on the hottest new software around along with exclusive versions not available anywhere else. We offer a Reader Disk to accompany each issue, buy it or not, the choice is yours!

We need is your support, it's going to be tough to keep going and it really up to *you*! Instead of wishing us luck post us a cheque to order your copy today!

Ordering
==========
As we're sure you'll appreciate launching a magazine in a declining market is a very risky venture and our print run has to remain conservative - we can't afford to maintain a stock of back issues for long.

We're not a newstand publication so don't bother looking in the shops. The Atari platform needs this magazine and we need your subscription so do yourself and us a favour, take out a subscription or order an evaluation copy today! If you decide to subscribe you will receive the first available issue, if we've sold out of an issue your subscription will start with the following issue.

Subscriptions

Many of you (and most of us) lost money following the Atari World debacle and we're determined not to make the same mistake. Atari Computing subscriptions are refundable at any time. Cancel your subscription in writing and we'll return any outstanding credit to you, minus a deduction to cover our costs.

We are continually receiving new subscriptions. As we only print "what we need" of each issue, this means that if we have run out of a particular issue, your subscription will start from the following issue.

Contacts

Telephone:

Unfortunately we have had to withdraw our telephone enquiry service
due to the large number of calls, many at unsociable hours, from
people who thought we were operating a general Atari helpline, rather
than being there to answer queries on the magazine. This helpline is
now closed, and callers will simply hear a recorded message to that
effect.

Therefore all future enquiries about any matter concerning Atari
Computing MUST be made in writing either via email or by snail mail.
And sent to the following addresses. It would also be helpful if
letters, subscription enquiries and editorial material were on
seperate sheets within the same envelope. Ideally letters and and
editorial should be on disk in ASCII format, or via e-mail or netmail
if you have that facility.

Unfortunately we cannot enter into personal correspondence on general
Atari matters although we will obviously answer all specific Atari
Computing queries.

General enquiries

Atari Computing
"Rois Bheinn", Overton Crescent,

Subscription Payments:

These payments should still be made to the address published on
subscription forms, which are available via email or snailmail.

Receipting subscriptions:

Just like every other magazine, your payment being cashed is your
receipt. We cannnot issue receipts by e-mail, SAE, postcard etc.
because of the additional work this would place on the volunteer
staff.

Issue gone missing? Faulty reader disk?

Write/email the office or leave a brief message on the answerphone on
01206 852602 and we'll sort out the problem as soon as possible.
Please don't use this number for any other reason - we won't respond
anyway so save your money and our time!

About the magazine/Who are we?

The launch of Atari Computing was financed by the Atari Computing
Group, based on CIX, and dedicated to supporting the Atari platform -
We're delighted with the response from our readers and are working
hard to ensure future issues maintain and improve the same high
standard!

Atari Computing is an enthusiasts' magazine compiled and distributed by Atari enthusiasts. We're not a publishing company so our efforts have to be directed towards getting the magazine out on time - we do not operate an Atari 'helpline' but are pleased to help wherever possible via the Q&A pages in the magazine.

1997 UK Atari Shows

Mike Goodman, the organiser of the successful Atari Shows last September, has confirmed three Spring Atari Shows will be taking place in April and May at the same venues as last time (and the addition of a Scottish show):

- Saturday 26th April: National Motorcycle Museum, Birmingham - probably in the Compton Suite.

- Sunday 27th April: Osterley Four Pillars Hotel, London.

- Sunday 11th May: Central Hotel Glasgow (NOW CONFIRMED!!!)

All shows will be open from 10am to 5pm, and most of the exhibitors from the last shows plan to attend. Admission will be £5 for adult until 2pm, £3 after. Children are £1 all day

Exhibitors include Goodman's, System Solutions, Titan Designs, Black Scorpion, The Upgrade Shop, Console centre, FaST Club, HiSoft UK, 16/32, Portfolio Club, Calamus User, Atari Computing, Sunrise Audio, Floppyshop, BeST Electronics, Disk mags, User Groups...

Atari Computing have a stand at all shows, so make a note in your diary to show support for the Atari scene and tell us face to face what you'd like to see in the magazine. Even better bring along some articles or software we can use in the magazine!

Full details will be included in Atari Computing issue 4, but if you'd like to exhibit or require more details contact Goodmans:

Tel: +44 (0)1782 335650
Fax: +44 (0)1782 316132
Goodmans, 16 Conrad Close, Meir Hay Estate, Longton, Stoke-on-Trent, ST3 1SW (enclose SAE for reply).

Please spread this Press Release far and wide:

* BBS SysOps please post this to your local areas...
* If you have Atari Web pages please post this there...
* User Groups, publicise the shows at your meetings and organise car shares...

The Atari platform is alive and well!

Best wishes

The Atari Computing Group A|C|G

205. FS: Atari Computer Goods! Some Shown! FREE Catalogs!

Newsgroup: comp.sys.atari.st
Date: 1997-04-04 00:00:00 UTC
From: bensmith@linda.teleport.com
Message-ID: <5i2h11arq1@linda.teleport.com>
Source record: 124547
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. Everything mentioned on this list is on this list because I have multiples of these Items and I thought I'd list them for you. Especially if you wanted to buy More than one. So check it out!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, Spectre GCR Macintosh Emulators, MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I

will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

I recently copied 3000 + files from one partition to another (and back again).

I checked the files before and after copying, there were no problems.

I would not accept any missing/corrupted files after a copy operation.

BTW, I used the desktop to copy; it is not able to cope with files that
have long file names (Minix partitions may have these).

I have no experience with Kobold, but have experienced problems with 'cp'
in shells, where it was not able to copy files because of strange
characters in the file name.

I am using a 4 mbyte STFM (TOS 1.04).

207. Hotlist with CAB 2.0 Demo

Newsgroup: comp.sys.atari.st
Date: 1997-04-04 00:00:00 UTC
From: apalmer@zapcom.net
Message-ID: <5i2h5r$2b9$1@ultra.sonic.net>
Source record: 124549

Testing the CAB 2.0 demo was a pain because hotlist didn't work. I decided to create a html with the sites I use the most. I was surprised to find the hotlist used by CAB 1.5 is saved as a html page. I just moved HOTLIST.HTM over to the demo folder and used the load local function and I have my hotlist. Works great!

Someone posted they had created an english rsc file for CAB 2.0. Where can I get this file?

A check in a letter ?? These rather often get lost ! I know of a couple
of cases here in Germany where post employees have been convicted of
scanning letters for checks, and stealing them. The Bundespost even
warned people should not send money, not even checks, in normal letters.

M > Does anyone know the limit on the number of files in a
M > directory/folder?

Not really. There is a limit to the entries in the root (255 or six).

M > I am getting wierd stuff happening with my acc's and cpx's.
M > For example I can see cpx's in my directory(on a different
M > drive) and xcontrol will see *some* of them, but not load
M > them. Freedom2 demo only sees very few cpx/z's compared to
M > what I can see from the desktop. For acc's I can't see some
M > acc's that I just copied to my acc directory!

This sounds very much like trouble on the scsi bus, caused by
inferior cable. Chris Krowchuk was absolutely correct when he said
that a high quality cable will cure a lot of ills. And specifically,
what it cured on mine was trouble loading cpx's, copying
newdesk.inf's for SuperBoot, and other sorts of auxiliary files
(printer cpf's for Cardfile, for example).

Another good reason to buy a syquest EZ, by the way, is that it
comes with an excellent scsi cable.

<the usual drivel snipped>

I sent the whole post with a short note requesting pest control to
'postmaster@li.net'. Was this correct? Or is there something more
creative and/or forceful I should have done?

It is interesting that Rich, Paul and I were singled out. While I
don't approve of 'bad language' on the 'net, I do believe that
Paul's one-word response to Mikey's blather was the most appropriate.
And this post from mweber proves that it was not only appropriate,
it was correct.

F***wit!

Y > cables along with a S314 drive.

Only the sf314 is a double-sided drive. And it may not be any good.
Try formatting a disk on the desktop (make sure it is a new one, not
something with anything of value), and then try writing something to
it. You can try this with all three of your drives.

Also, <Esc> forces a re-read of the disk directory of the top
window. Try that a few times with a disk in the drive.

Tragically, the original Atari disk drives are getting pretty old
now. I am currently working on some text and pictures to help people
with mounting and connecting readily available pc drives to the ST.
I am bound to finish the project sooner or later.

Yes, this is a very common thing nowadays. When Activision was putting
together its Commodore 64 CD, they were actively asking for pirate copies
of their old software in order to flesh it out. (Of course, they wanted
the pirate screens removed, but...)

```
THE ATARI ST QUICK FAQ
----------------------

Draft v0.4 - March 28th 1997
Nicholas Bales - bales@garonne.stortek.com

In order to save bandwidth and avoid comp.sys.atari.st newcomers asking
the same questions over and over again, here is a quick list of the most
Frequently Asked Questions (FAQ) and, hopefully, useful answers. The aim
of this FAQ is not to answer all of your questions, but only to indicate
pointers to the most common ones.

Please note that this FAQ is aimed at newcomers and is mostly ST oriented,
but I hope it will also be of use to more experienced users.

I am only the compiler of this FAQ. I have built it up from many c.s.a.s
threads, older FAQs and other internet based information. I am not really
such an Atari specialist myself, and have no personal experience of many
of the topics that are dealt with in this FAQ.

Therefore, if you have more specific questions, please direct them to the
newsgroup instead of me. Any comments regarding the FAQ itself however
(corrections, additions, comments, total contradictions) are absolutely
welcome. I'll be quite happy to add omissions and correct errors.

Topics that are not covered in this FAQ might be in the older FAQs:

ftp://ftp.sn.no/user/hallvart/atari/info/n_faq1.txt
ftp://ftp.sn.no/user/hallvart/atari/info/n_faq2.txt
ftp://ftp.sn.no/user/hallvart/atari/info/n_faq3.txt

Credits are listed at the end of this file.

2.2.4 ZIPs, CDROMs, Syquest drives and non-SCSI
2.2.5 Hard disk driver software
2.3 I want to replace my floppy drive. What should I do ?
2.4 How can I upgrade the operating system ?

3. Connectivity

3.1 How can I transfer files between a PC and an ST ?
3.1.1 Exchanging TOS and MS-DOS disks
3.1.2 Exchanging TOS and Macintosh disks
3.1.3 Serial port file transfer
3.2 How can I hook up my ST to the Internet ?
3.3 Where are the good Atari Web Pages ?

---

1. Starting up on the Atari ST

1.1 What kind of machine is an Atari ST ?

The Atari ST range is a 16/32 bit Motorola 68000 based personal computer range started in the mid 80's. Here are some generic specs. Some models differ from these specs, so check the list below

Processor
Motorola 68000 (68030 on TT and Falcon) processor at 8Mhz (16 on MegaSTe and Falcon, 32 on TT030)

Screen Resolutions:

ST/STe/STfm/Mega ST/Mega STe:
512 colour palette (4096 on STe, MegaSTe, TT)
ST High: 640x400/Monochrome on dedicated monitor,
ST Medium: 640x200/4 colours on colour monitor or TV,
ST Low: 320x200/16 colours on colour monitor or TV,

TT:
ST resolutions (above)
TT Low: 320x480/256
TT Medium: 640x480/16 (plain VGA)
TT High: 1280x260/2 on an ECL monitor.
Falcon:
ST resolutions (above)
many other resolutions like 640x480/256 or 16 bit truecolor
(65,536 out of 262,144). 640x400 interlaced is the maximum
on ST colour monitors.

Ports:
Cartridge, Midi In, Midi out, Parallel, Serial, Monitor, Disk Drive,
ACSI (proprietary hard drive, except Falcon), TV antenna (on RF equipped
models), RCA/CINCH stereo (from STe on), Joystick/Mouse, Analogue joystick
(on STe), SCSI (Falcon/TT).

Models:

Name Speed RAM R TOS Floppy MBESVKTC Comment
---
130 ST 8 128Kb D 1.0 Ext. Never marketed
260 ST 8 256Kb D 1.0 Ext. Very few made
520 ST 8 512Kb D 1.0 Ext. disk TOS on early models
1040 ST 8 1Mb D 1.0 Ext. disk TOS on early models
520 STf 8 512Kb D 1.0 360Kb

520 STe 8 512Kb S 1.62 720Kb MBE
1040 STe 8 1Mb S 1.62 720Kb MBE
Mega STe 16 1-4Mb S 2.06 1.44Mb MBE VKTC TT style case.
TT030 32/030 2-266MbS 3.06 1.44Mb E VKTC Various mem/HD configs
Falcon 6/030 2-14Mb P 4.04 1.44Mb BE TC Many enhancements (below)

R=RAM type (D:DRAM/S:SIMM/P:Proprietary memory board)

M=RF Modulator
B=Blitter chip
E=Enhanced 8bit DMA stereo sound, 4096 colour palette, hardware scrolling,
analog joystick ports
S=MegaBus processor direct bus slots
V=6U VME bus slot
K=Detached keyboard design
T=Internal time/date clock
C=68882 Math co-processor

In addition to all this the Falcon030 also has many enhancements the other models don't have. To name just a few : DSP (56001) subsystem, 16-bit graphics system, 8-channel 16-bit sound system, 16-bit expansion port.

1.2 What kind of monitor can I use ?

1.2.1 Connecting to a TV Set

STfm and later models were equipped with an RF Modulator allowing them to be connected to a TV's antenna connector. Check section 1.1 to see if your ST has a modulator. You then need to tune into the correct channel on the TV to get the ST picture.

In some countries, Atari shipped machines with a SCART/Peritel cable that plugs into the monitor port instead of the RF Modulator. In this case you need the adequate cable and a SCART/Peritel equipped TV set. No tuning is required, and the picture is higher quality than through aerial.

A TV will only display in low or medium resolution modes.

* 1.2.2 Atari Monitors

Monochrome (640x400 colours) requires special Atari high resolution 70Hz monitors (SM models). These monitors have a very stable paper white display. SM monitors can only display monochrome mode. TTs and Falcons can do without the SM monitor and display ST high on a VGA monitor.

ST Medium (640x200/4 colours) and ST Low (320x200/16 colours) need a colour monitor (SC series) or a TV.

If you want to display all ST screen resolutions with an ST/STe/STf/STfm you need both types of monitors. Unless you use a multisync.

* 1.2.3 VGA, SVGA or multisync monitors

First of all, you need a monitor that supports the following refresh rates :

	ST High	ST Low/Medium
Vertical refresh rate	70 Hz	50 or 60 Hz
Horizontal refresh rate	31.5 Khz	15.75 Khz

A FAQ on the use of multisync monitors with the ST can be found here:

ftp://ftp.teleport.com/users/atari/multsync.faq

* 1.2.4 Falcon Monitors

The Falcon is equally happy with a VGA/SVGA/etc. monitor or an old ST/STe type monitor (though resolution will be limited to 640x200 on these). When you buy a Falcon you _must_ also simultaneously buy a "video cube" for it, that connects to the Falcon's proprietary 19 pin connector. There are two cubes that were sold by Atari, one for the ST type monitors, one for the VGA type monitors. Which you get is completely up to you. Shortly

after the release of the Falcon, third party developers also released "cubes" that could be used with both types of monitors. The cube is an uncomplicated adapter and costs between US$10 and US$15.

A text file about Multisync/VGA/ST-res adaptors for Falcon is here:

ftp://nic.funet.fi/pub/atari/falcon/doc/falcadap.zip

1.3 Where can I get a boot disk for my ST ?

1.3.1 Booting without a disk

First of all, Atari models with TOS in ROM don't need a boot disk. If you do not have a correctly formatted double density disk to boot from, just wait a few minutes for the GEM desktop to come up on it's own, then format a clear double density disk using the menu option.

If the desktop screen doesn't come up after more than 5 minutes, either your ST is broken or you have an old ST (neither f or fm or e) without TOS in ROM.

1.3.2 Atari Language disks

Depending on the ST version you have, a language disk was supplied with some basic software, mainly:

CONTROL.ACC Control panel desk accessory. Later replaced by XCONTROL
XCONTROL.ACC A modular control panel accessory. Uses CPX files.
STBASIC.PRG An old and very buggy Basic interpreter.
LOGO.PRG An old and quite useless Logo interpreter.

Very few of the programs supplied on these disks were of much use. If it was lost, it is no big deal. Better quality public domain, shareware or commercial replacement programs can be found on most FTP servers (see section 2.2).

1.4 Can I run Atari ST software on my PC/Mac/Unix box ?

You need a program which fools your computer into running Atari ST programs. This is called an emulator. There are plenty of them available on the Internet.

Here are some good net resources for Atari emulator software:

http://www.nfinity.com/~swhalen/node99/st.html
http://www.emulators.com/
http://www.complang.tuwien.ac.at/nino/stemu.html
http://wwwperso.hol.fr/~gidouin/pacifist.html
http://www.aixit.com/

1.5 Where can I get those TOS ROM images ?

TOS is the ST's operating system. It was supplied on ROM chips with most STs. Some emulators need an image of these ROMs in order to run.

However, TOS is copyrighted software and the distribution rights belong to Atari. Neither Atari nor JTS (the company who now owns Atari) has stated that any version of TOS can be freely distributed and used. Distributing it without a licence is therefore software piracy, which is illegal and enforced everywhere in the world.

Solliciting pirated software is also illegal.

Owners of a real ST can use a program called TOSDUMP.PRG to make a TOS image for their own use. This is considered legal as long as the image is not distributed and you own a legal copy of the program (ie: the ROMs).

Illegal copies of TOS images *can* be found on the net. Please note that using one is illegal, and asking for them in the newsgroups is against the charter and will cost you lots of flames and trouble.

---

2. Software

2.1 Where can I get WareZ for the Atari ?

Software piracy is an illegal activity. Participating and promoting it is considered an offense on most newsgroups, and comp.sys.atari.st readers are strongly opposed to it.

If you still wish to ask for pirated software, do so at you're own risk, but be aware that you will receive flames, complaints to your domain administrator resulting in losing your internet access, general discredit and maybe even more trouble.

See also section 1.5 on TOS ROMs.

2.2 Where can I get freeware or shareware on the Net ?

There is lots of freeware and shareware available for the Atari ST on FTP archive sites. Most applications are available as such.

Complete lists of FTP sites can be found here:

ftp://ftp.sn.no/user/hallvart/atari/info/ftplist.txt
http://www.umich.edu/~archive/atari/Info/atari-ftp.sites
http://web.cnam.fr/ftp/pub/Atari/Docs/atari-ftp.sites

Web interfaces to 3 of the most active atari FTP archives:

http://www.cnam.fr/Comp/Atari/Index.html
http://micros.hensa.ac.uk/micros/atari/tos/atari-tos.html
http://www.umich.edu/~archive/atari/

FTP mirror to uni.paderborn and umich archives

ftp://sunsite.doc.ic.ac.uk/pub/computing/systems/atari

Do not forget that shareware (and sometimes freeware) means that you have to register the software if you use it regularly. Please do so as this is an encouragement for programmers to continue developing for the Atari platform.

2.3 Is there a DOOM clone for Atari ?

SubStation from UDS is a Wolfenstein 3D clone for the STE, without texture-mapping, but with a similar look and feel. UDS has a web site:

http://www.uds.se/complete.htm

Bad MOOD is a joint internet project to build a 3D Doom engine for the Falcon. More information can be found here:

http://rand.thn.htu.se/cgi-bin/buildpage?bad_mood

2. Hardware Upgrades

2.1 How can I upgrade memory on my Atari ?

2.1.1 Expanding SIMM equipped models

If your ST is equipped with SIMM memory, you can easily upgrade your memory to 1, 2 or 4Mb by just taking out the old SIMMs and popping in the new ones.

The correct memory type is 30 pin SIMMs, minimum speed 120ns, with or without parity, 256Kb or 1Mb. It is best not to mix different SIMM types. They must be implemented by pair in slots 1 and 3, then 2 and 4 (from back to front).

Atari STEs are originally equipped with either 2 (520STE) or 4 (1040STE) 256Kb SIMMs that can be replaced by 2 or 4 x 1Mb SIMMs.

Because of a bug in TOS, STEs will not recognize a 2.5Mb configuration (2x256Kb + 2x1Mb) without a small AUTO folder program called simmfix. This can be found on any FTP site, but is quite unreliable.

* 2.1.2 Expanding DRAM equipped models

On DRAM memory models, the memory chips are soldered directly to the computer's motherboard. This make expansion more tricky. Each chip has to be soldered correctly, and the motherboard must have enough room for the expansion. A 520ST/STF can be expanded to 1Mb, a Mega ST can be expanded to 4Mb.

A way around this is to use a special memory expansion board that replaces the original memory banks with standard SIMM sockets. There are many such solutions available like the Marpet Xtra Ram board. Look for Atari related companies on the Atari web pages (section 3.3).

2.1.3 Those Falcon boards

The step forward from DRAM to SIMMs on the STE series became a step back to a proprietary memory board system on the Falcon. The falcon was pre-equipped with 3 memory board models: 1, 4 or 14Mb. Upgrading a Falcon means scrapping the original memory and replacing it with either a new proprietary memory board or a third party SIMM board. There are many of these available and can sometimes be combined with a CPU accelerator board (see section 3.3)

2.2 How can I connect a hard disk drive to my ST ?

2.2.1 Atari Megafile and SH hard drives.

These were proprietary hard disk drives designed by Atari for the ST. They were available in capacities ranging from 20 to 60Mb. These are the only hard drives that are directly compatible with the Atari ACSI port on original STs.

2.2.2 SCSI hard drives

In order to use these, you need a SCSI Host adapter that connects the SCSI drive to the ACSI hard drive port on the Atari. There are several models available depending on whether or not you need parity, whether or not they are for external or internal drives. The 2 most common SCSI host adapters are ICD's The Link II and the Link'96 from Norbert Wieczorek. They can be found at:

http://www.icdinc.com/
http://members.aol.com/NorWiecz/index_e.html

Don't forget also that there is not much room for a 3.5 hard drive inside an original ST case. You will need either to put the whole system into a PC type tower case, or to file an external housing and power supply for your hard drive.

2.2.3 IDE hard drives

There seems to be actually no way to connect an IDE drive to an ST. You need to go the SCSI way. See section 2.2.2

The Falcon has an internal IDE slot for internal 2.8" IDE drives.

2.2.4 ZIPs, CDROMs, Syquest drives, anything else non-SCSI

These have to be SCSI models and use a host adapter described in 2.2.2. Parallel port peripherals cannot be used an any ST because Parallel port communication was not fully implemented by Atari.

Be aware also that CD ROMS and ZIP drives need parity enabled, so you must have a parity enabled SCSI adapter.

MLM or any other non-SCSI drives will need a SCSI adapter, that you will
then connect to the SCSI/ACSI adapter (section 2.2.1) connected to the ST.

A FAQ on using CD ROMS with Atari computers can be found here:

http://www.mcc.ac.uk/~dlms/CD_FAQ

2.2.5 Hard disk driver software

In order to get TOS to recognize the drive. AHDI is Atari's Hard Disk
Driver an can be obtained free from any good FTP server (see section 2.2).
However, it appears that it is not as reliable and efficient as 3rd
party driver software such as ICD Tools or HD Driver.

It seems that some drivers are not compatible with some drives while they
sometimes give better performance on others.

(Input needed)

2.3 I want to replace my floppy drive. What should I do ?

2.4 How can I upgrade the operating system ?

The ST's operating system, TOS, is on ROM chips on most STs. Only the very
early ones had TOS 1.0 on disk.

TOS 1.2 (1.02) and 1.4 (1.04) came on 6 chips. All later versions came on
2 chips. TOS 2.06 is the latest version that can be used in an ST(e/f/fm).
TOS 3.xx is for TTs and TOS 4.xx is for Falcons. These two are highly
hardware dependent and cannot be used on other machines.

Upgrading TOS from a 2 chip version to a newer 2 chip one is quite simple.

For upgrading old 6 chip TOS machines to TOS 2.06, look here:

ftp://home.mtholyoke.edu/users/kellis/atari/tos206up.txt

Otherwise there are many TOS upgrade boards available as well as Bi-TOS
boards allowing you to switch from your older TOS to 2.06 with an extra
switch. This is to avoid compatibility problems with older programs.

---

3. Connectivity
==========

3.1 How can I transfer files between an ST and another computer ?

3.1.1 Exchanging TOS and MS-DOS disks

The TOS disk format is DOS compatible. This means that any 720Kb double
sided double density disk from a PC can be read on an ST and vice versa.

There are several limits however:

-Older TOS versions (before 1.4) do not format disks exactly the same way
as MS-DOS, so for these models, you might try formatting the disk on a PC.

-Some old 520ST, STF and STFM models use 360Kb single sided drives which
are not compatible with most newer 1.44Mb PC models. You must either get
a double sided drive for the ST or find a PC that is able to read the
old single sided disks.

-Windows 95 uses long filenames and seems to sometimes corrupt TOS disks,
so be sure to use the 8+3 standard DOS/TOS format.

3.1.2 Exchanging TOS and Macintosh disks

TOS is not compatible with macintosh disk format. However modern Macs
are supplied with a system extension that allows reading and writing
MS-DOS disks which are compatible with TOS (See section 3.1.1).

3.1.3 Serial port file transfer

Another way of exchanging files between ST and PC is to use the serial
port with a null modem cable. Ghostlink will do this and can be found at
your favourite FTP site (see section 2.2).

3.2 How can I hook up my ST to the Internet ?

The ST can be used to send and receive email, read usenet newsgroups,
download from FTP archives, and even to surf the web.

There is a whole lot of internet resources on the subject:

The Atari Internet guide
http://zippy.spods.dcs.kcl.ac.uk/~garfield/aig/aig.htm

The Atari Connection
http://www.cedep.com/~gstamant/atari/atanet_e.htm

All of the Beta Versions come with an English RSC file.. the Cab 2.0
demo that was released was a German release.

Nick.

I'm afraid, at least at my end anyway, that the only practical
solution IS an alternative - NEWsie. It works well under STiK (I've
been using it for months) and have been pleased with its performance.
Try as I might, I could never get Oasis 2 to work (both in regarding to
the bug you mentioned and the recent admission by the programmers that
Oasis2 has a bug regarding PPP accessing due to different kinds of PPP).
You'll find NEWsie to be MUCH friendlier to configure and run.

225. Logic Atari v2.5

Newsgroup: comp.sys.atari.st
Date: 1997-04-04 00:00:00 UTC
From: tparrett@parrett.fast.co.za
Message-ID: <860175394_OASIS_@parrett.fast.co.za>
Source record: 124567

I recently took delivery of Logic Atari v2.5 and would like to contact other users to compare notes and bug reports. I am aware of and subscribe to the Logic-users-digest but find it is dominated by PC and Mac users. Questions posed about the Atari versions draw no response.
I thought I would try my luck here despite seeing a message a couple of weeks ago directing another Logic user to the above list. i have sent a list of comments to Emagic but have yet to receive a reply. If other users would care to mail me we could perhaps begin to compile a definitive list of problems and ommisions. It is important that this be done as Emagic have clearly stated v2.5 is the very last Atari version they will release.
I thought it was an expensive upgrade and to find faults and ommisions (in the manual but not implemented !!) is annoying to say the least. We really need to make a collective noise if they are even to consider correcting the situation witn v2.5 especially as it was finally released 15 months later than promised. !!
I look forwards to hearing from user either here of by email

I suppose you'll may try SMF Player 1.1 from Seitz Alexander ... I
have found it on one of these two CD-ROMs; Alpha, Gamma.

Also I'm very interested by what you said about the last program FIMP
which seems to play the midi files by the sound chip ? Am I wrong ?
Where have you found it ?

When running a UNIVBE driver I was able to get the Carebears JUNK demo
to run nearly perfectly under PacifiST and TOS 1.0.. The difference
between running it in LINE mode and SCREEN was amazing.. There were
alot more colors on the screen.. It was an amazing thing to see..
PacifiST rules! I bet the demo would have run even better if I could
have put the machine in 50hz.!! (BEG BEG PLEAD!! 50/60hz switching!)

Need to get Cuddly Demo running on PacifiST, then I send my check for
$100!! <grin>!

Nick

231. Deskjet 500 & ST--advice please?

Newsgroup: comp.sys.atari.st
Date: 1997-04-04 00:00:00 UTC
From: Doug Kendall <dkendall@facstaff.wisc.edu>
Message-ID: <3345925C.389B@facstaff.wisc.edu>
Source record: 124573

Friends,

I broke down and bought a used HP DeskJet 500 this week, and hooked it up to my 520STFM (2.5megs, TOS 1.4, Syquest EZ135, 2 floppies). Now I have a few questions. I've looked over the FAQs and tried to get to the "HP Deskjet/Atari ST HomePage" on Hallvard Tangeraas' fine Atari links page..unfortunately neither Lynx nor Netscape would actually communicate with that page at all (Just in case anyone thinks only CAB has such problems!).

Most of the non-GDOS applications I tried worked out fine...among them Edith Professional and RouteFinder. WordPerfect 4.1 did not do so well, but I often fumble various parts of the printer selection there so that could be me....although there was no plain old "Deskjet" choice...just several with letters (A,B,C,D...) that refer to various collections of fonts available with Deskjets separately.

My main question relates to GDOS drivers and fonts. My understanding is that I can use fonts with the "LS" designation; I have some of those that came with the Wordflair version that was on an ST Format disk a while back. However, there's no Deskjet or Laserjet driver on the disk, just a driver for the Atari Laserprinter. Other applications that use GDOS didn't come with drivers or fonts (RecipeBox, CAB, etc.) but had been perfectly happy with the dot matrix drivers and fonts that came with Wordflair.

I've found little evidence of such things in HENSA, cnam, or Umich. I see that FaST Club in Britain sells disks that look right, but I'm not sure if anyone carries them in the States. I should note that, being a bit backwards in many ways, I use G+Plus (one of the first improvements on the original Atari GDOS) rather than SpeedoGDOS or NVDI. This should be able to use anything that will work with GDOS itself, but I doubt it could use later stuff (say Speedo GDOS drivers).

Am I overlooking something? Or is my only real choice to go out and buy NVDI or SpeedoGDOS? Will they come with drivers for a Deskjet 500?

Any comments/suggestions are welcome either here or to my email address. Thanks,

Doug Kendall
dkendall@facstaff.wisc.edu

Am I missing something here

232. Re: tree check (/w Kobold)

>any experience with this?
>I am going to try it again, this time with Uwe Seimets HD Driver
>

I have had similar problem on my TT. Accoring to the programmers of
Kobold it isn't Kobold that causing problems but the hardware. It
seems there are a lot of bad(?) memory expansion cards. Since I forced
Kobold to copy with the GEMDOS MODUS on and since I restricted the
memory cache to ST-RAM only I don't have these problems anymore.
Ofcourse you loose a great deal of the speed, but at least it works.
Copying via the desktop is sometimes faster.

Hope this help

>
>Here's hoping and thanks

For the moment I really can't recommend you Oasis 2.10 especialy if
you're using the ppp-protocol. Here in Belgium and probably elsewere
too there is no way to make it work with ppp.
I've heard rumours that the programmers are working hard to solve
these problems.
In the meanwhile use Oasis 1.35e.
On thing to end. You must put the Oasis2 dir on the root otherwise
you'll have troubles.

Hope this help.

Hi all!

I'm going to try to attemp the 38000bps upgrade with the 74LS74 chip but I
have a few questions before I start!

Does anyone have good reliable ENGLISH docs on how to do this
modification?

I would like to hear from a few of you that has done this mod.
I have a 1040 STe 4meg tos 1.06 and at the moment only a USR 14.4
but if I accomplish this mod I will ofcourse be upgrading the modem! :-)

I have german docs and the guys tried to transcribe them to english but
left out alot of things!

Thanks
Johnny

Hi All,

If any of you have tried to use the WAG Guestbook over the last couple of days, could you go back and try again please?

I have changed the Guestbook because the one I was using was unreliable and difficult to connect to :-(

If you left a message in the old one could you re-put it in the new one, because I have not been able to retrieve any messages from the old one at all because the server was always too busy :-(

Thanx :-)

Yours Roy

Hi All,

I've had an Atari ST since the days it used to be really popular here. Now though, I use a PC all the time and the ST is in the loft. However, I used to love some of the games for the ST, and one in particular I used to play was Sentinel by Firebird software.

Now I've downloaded the very impressive Pacifist emulator and I want to play my copy of Sentinel on it, but I need to somehow defeat the copy protection on it first. I'm not into software piracy, I just want to be able to continue playing the game on the PC. Does anyone know whether this is possible ? I hoping along the lines that a program is out there that'll do it ?

Regards,

Tony.

242. Thoughts on buying a PeeCee...or, so long Atari, hello WinDoze?

Newsgroup: comp.sys.atari.st
Date: 1997-04-04 00:00:00 UTC
From: Evil has no boundaries <chrishinds@delphi.com>
Message-ID: <hbDYM+s.chrishinds@delphi.com>
Source record: 124584

Hi all--

I need someplace to vent..

Lately, my thoughts have been turning towards buying a PC more and more... I'm an owner of a Falcon, and love it to death. But the one area in which I want to use a computer for (the internet), is the one area in which Atari computer are years and years behind PCs.

I've been trying my best to use my Falcon, but for christ's sake, right now I'm using Oasis 1.35 to read news, and 2.05 to do e-mail. (v2.10 was garbage...didn't work AT ALL). And I can't decode e-mail attachments with Oasis, nor can I even print through Oasis. I have to extract items to do those things, a major pain.

And as for as the web, I have nothing, NOTHING!. I do my web-surfing from a text-based Delphi account or the MicrShit Internet Exploder we have at work. I've been waiting patiently for STiK to support PPP for about a year now, and still nothing. And even when (and if) it does come out, or any of these other rumored commercial web-browers, how will they support stuff like RealAudio and ShockWave...proprietary shit from the PC world?

I really, REALLY don't want to have anything to do with the Micro$lut/WinDoze/Outel world of crap, but do I have any choice, if I want to use my computer for the internet? Even if some super-fast Falcon Clone comes out, there isn't any Internet software for it.

Help me out people...what are your opinions on this subject?

I've got to do something soon, 'cause the set-up I have now is really pathetic. When you can't even print from your e-mail program, something is seriously wrong.

Long Live Atari!! (but where are the Internet applications?)

An Atari user since the 400 with an 810 tape drive,

245. Another X-oR Question

Newsgroup: comp.sys.atari.st
Date: 1997-04-04 00:00:00 UTC
From: "chrisTiaN.a.h." <godpup@ix.netcom.com>
Message-ID: <334602F8.1D0E@ix.netcom.com>
Source record: 124587

okay, i've got X-oR installed on my hard drive, and everytime i run the program, i get an "output device not receiving data" message. which of course gives me the option of a.)cancelling X-oR or b.)cancelling X-oR. then it occurred to me that the master disk must be used to boot the program, and then you can use all the profiles and editing features etc. from the files installed on the hard drive. (yes, all the files and folders are where they're supposed to be..) question. now that Dr. T software no longer exists, and the boot disk is not copyable, what the hell do you do if it somehow gets corrupted? (blow off the 100 sum odd dollars you paid for the program? ummm....no.) at one point you could mail in your registration card, and you'd receive a second disk, but that doesn't seem like a possibility anymore. now, am i correct in all this, or is my program just goofy, and won't "launch" out of my hard drive rather than using the 3.5" key disk??? HELP.!?

machines rattle happy,

Various MIDI/studio/audio items for sale:

DH100 Casio MIDI wind controllers (2) self-contained, battery-
powered, fairly good key action, look like baby saxes.
Rewired to finger like Irish tine whistle or bagpipes, but
easily swapped back to recorder/sax type fingering. (Two
wires crossed back--will do.) $75.00/w case $50 w/o.

TX81Z 4 op FM tone mod/wind mod. $175

TG55 SY rack version with bonus sound card $300

S612 Akai basic sampler with quickdisk floppy drive. Also have
Atari Soundfiler sample editing software. $150

244 Tascam 4 track cassette recorder. $250

PSM8 Very nice 8 channel mixer for MIDI etc., sends, recs,
quiet, compact, mic/line ins faders. $200

Micro Gate Alesis noise gate. $40.00

Micro Enhancer Alesis "BBE"ish brightener. $40

GE 74 Kenwood DJish stereo graphic EQ w/reverb/mic mix. $100

575A Flanger, DOD pedal-type mono. $30

MN50 Fostex mini mono compressor/mixer 4 line, 1 mic. $30

M268 Sure balanced mono mixer w/phantom power hi-lo imp 4 mics 1
aux. $75

AMP Davis, guitar/keys, (this one's been out of the studio--a
lot) one 15" and about 100 watts/reverb, 2 channels, pots
not so clean at quiet levels anymore. $100

Atari ST Software:

Soundfiler, S612 sample editing. $50
Also have many disks of home-brewed samples included.

Includes boxes (for most) and manuals. All excellent condition,
home studio, very limited use only. Low actual hours.

Why not get a BBC emulator, which has by far the best 8-bit versions of
games - such as sentinal, which doesn't have copy protection.

Are you using the correct HSmodem drivers for your Falcon? Use DRVIN
and SCC and place them last in your autofolder with SCC last.

>And when I run GEMbench, every time it checks the FPU, it appears a row
>of bombs. The guy I bought it from said that there was a 68882 inside.
>There is also this bootup problem. Is goes tick,tick,tick for about 45
>secs and then boots up with the Atari logo. Can it be a faulty
>powersupply?

The bombs from Gembench could indicate a faulty FPU. Open your machine
and locate the FPU (under the power supply). Check that the chip is
firmly in place in the socket. If the bombs won't go away, the FPU is
might be damaged.
The bootup delay is normal. To reduce the time, edit your nv-ram
settings (boot delay = 0), make sure you have a formatted floppy in
the drive. If you don't have an internal IDE drive, get the util that
bypasses the IDE check.

```
Greetings all atarians out there!
```

I�m not very familiar with the newsgroups, but was very pleased to see
that many people still are interested in the atari-platform.. :-)

Got a problem though.. ..have had neodesk 3.x installed on a harddrive
that I bought secondhand, and didn�t get the original disk for it.
Now the neodesk.exe has become corrupted for some reason... :-(
..but going back to the TOS 1.62 desktop is NOT very tempting..!
If someone knows a way to get that file (neodesk.exe) or (even better)
have an original disk for sale I�d be very thankful!

I�m also interested in NVDI, some later version that supports the
TT-fonts..

Since I live in Sweden, I�m most interested in bying from someone from
within Scandinavia.. ..but I�m open for all offers.. :-)

please mail me at: gokmasebrulop@hotmail.com
Thanks! // Joakim H�gberg

> computer are years and years behind PCs.

Having just defected to the Mac, I must admit that Web browsing is much
better but everything else is pretty similar to the Atari, I think the
Atari handles the rest of it all very well (I was using an ST with Oasis
1.35).

> I've been trying my best to use my Falcon, but for christ's sake, right now
> I'm using Oasis 1.35 to read news, and 2.05 to do e-mail. (v2.10 was
> garbage...didn't work AT ALL). And I can't decode e-mail attachments with
> Oasis, nor can I even print through Oasis. I have to extract items to do
> those things, a major pain.

Email extracting is a bit of a pain, but I don't get much encoded mail
so it was never a problem. A bit of advice migt be to have anothe
rmailbox and call it "Old Mail" or something and put all the mail you
have read and don't want to bin, into that folder. Then is you have
quite a few items to decode in your main mailbox you can just dump the
whole mailbox file onoto your Decoder, you don't even need the other
mailbox that's just to speed things up and to make sure you don't
continually decode the old stuff over and over again.

> And as for as the web, I have nothing, NOTHING!. I do my web-surfing from
> a text-based Delphi account or the MicrShit Internet Exploder we have at
> work.

If you don't like MsIE then I dount that you'll find Netscape to be that
much bettter to be honest.

> I've been waiting patiently for STiK to support PPP for about a year
> now, and still nothing. And even when (and if) it does come out, or any of
> these other rumored commercial web-browers, how will they support stuff
> like RealAudio and ShockWave...proprietary shit from the PC world?

They won't but the novely of that stuff has worn of allready, if I wan't
really crap audio i'll go scratcha n old record thanks. I say wait for
PPP a bit more I think it is on it's way.

> I really, REALLY don't want to have anything to do with the
> Micro$lut/WinDoze/Outel world of crap, but do I have any choice, if I want
> to use my computer for the internet? Even if some super-fast Falcon Clone
> comes out, there isn't any Internet software for it.
>
> Help me out people...what are your opinions on this subject?

Really I say make sure you look at the PC before you jump ship and see
how much you like it and don't forget the Mac as an option, at least you
can use MagicMac and it should blaze along.

> I've got to do something soon, 'cause the set-up I have now is really
> pathetic. When you can't even print from your e-mail program, something is
> seriously wrong.

It's certainly a sad feature to have broken but personally It ever need
to print any email so it never bothered me.

Hi Odd, on 01 Apr 97 you wrote: ...respect, brethren

o>
o> My current ST-RAM figure is the 2 megs on the motherboard and a card
o> with additionally 2 megs. Then you tell me there exists cards with 10Mb
o> of ST-ram. Great!

Either an extra 2Mb or an extra 8Mb (to make 10Mb altogether).

o> Do you know where I can obtain one? Does there exists third-party ST-
o> RAM cards for the TT? If so, who's got them?

The only source I've heard of is Brad Korda at Best Electronics, but quite
expensive for the fully populated board AIUI.

Do you need extra ST-RAM though? Why not set program flags so that they run
in TT-RAM and get a TTRAM board? I have 2Mb ST-RAM here as well...

>> The "TT Ram" is configured for 32 bit addressing and requires the use
>> of a daughter board situated on the left hand side of the machine,
>> which accepts four 30 pin SIMMs, which can be any value up to 64 megs.
>> Thus, the max amount of ram you can have in one of these machines is
>> 266megs - 10 megs of "ST Ram" and 4x64%6 megs of "TT Ram".
o>
o> Let me get this correct. I have the Atari made 6-jumper TT-RAM card.
o> Can I use 4x64 SIMMs on this card? If so, could you please give me the
o> correct type and speed to get so that it'll work in Burst-Mode ?

70ns or faster access SIMMs that are "Nybble-mode" rather than "Fast Page"
types. I don't know any more specific details than that.

o> Yes, I know all that, but there's one thing I'm not quite sure of; The
o> motherboard and ST-RAM is running at 16Mhz, right?. So, the ST-RAM is
o> accessed over a 16Mhz bus. But, is the TT-RAM accessed over a 32Mhz
o> bus??? I would appreciate a clarification on this, please.

I'm not very good on this subject, but...

The motherboard runs at 16Mhz but this isn't related to the access to ST-RAM
being 16*bits* wide, nor the fact that access to TT-RAM is 32*bits* wide.
o> BTW, It's a excellent FAQ you've created. Keep up the good work ;-)

Coming along nicely B^{)

Well, I can sympathize with your frustration over having limited internet resources on the Atari platform, but...

For the last month or so I have been working at a place where everything is Windows 95 based. I must confess that the level of frustration of dealing with this unfamiliar and obstacle filled environment has really curtailed any ideas I may have had about straying PC-ward. It seems as though anyone who has had any experience with a GUI environment (other than Windows 3) has developed the wrong techniques and expectations to deal with Win95: The menu bar has been replaced with the Task bar which just has that stupid "Start" button on it - and the darn thing is usually placed at the bottom of the screen. Furthermore, the access to your disk and files has to be through several intermediary steps (in seemingly Byzantine complexity), just to move or copy a file. Let's not even start talking about installing and deinstalling new software - yeesh!

Well, I realize that this post is off topic for this newsgroup, but I had to respond. Although the resources are limited on the Atari for internet access, you can do a lot, provided your ISP is up to the task and provides SLIP and/or text based shell access through something like LYNX. In many ways internet access is critical for Atari ownership: the user's community is dispersed over the planet, and access to software and hardware is generally done over distance.

Right now, I am using a Freenet account, using CoNNect and the text shell. I have access to mail and news, and text-only web browsing is much faster than dealing with lots of pretty, but otherwise uninformative graphics. Moreover, the average size of Atari software packages, means that download times are a fraction of what the bloated software packs for the PC take - even on a 28.8 modem.

Sure we don't have RealAudio and Shockwave - no matter how snazzy these things get, the sound quality will still suck compared to a real, honest-to-God CD.

Alright, alright, enough ranting... I know that this is better addressed in an advocacy group, so apologies all 'round.

Sincerely,

Sure the price is very modest I agree with that. But I do have
problems with the fact that ASH are pushing us to buy MagiC.
That reminds me to the strategics that Bill G$tes follows.

: l> machine, just under the hard disk. Machines were issued with 4 or 10
: l> megs of Ram in this bank.

Rev. H uses socketed dram, which can take a total of 8 Mb, but comes with 2 Mb, without a daughter board. AFAIK, the memory handler can recognize only 8 Mb in the memory range involved, but the machine can have 10 Mb installed. There is no good reason for this, unless the 68551 chip does not know what to do with 6 Mb.

There have been many machines, Atari, Amiga, Next, and Intel's 386 and 486 machines that used 16 Mb x 8 30-pin SIMMS, to be used in groups of two or four, to give 16 bit word or 32 bit longword memory. See your local Mac dealer, or look in the biz.computer.other groups for memory sellers. See Computer Direct, or maybe Systems Solutions for a daughter board. The one I have for my TT has eight 30-pin slots, which will be filled with 128 Mb, 32 bits wide, as soon as my income tax refund comes.

If the TT daughter board sold by Atari would take anything larger than 16 Mb, from 4 4Mb x 8 SIMMS, it is a happy accident not contemplated by drawing number CA401058. I got those from Best. Nibble mode memory is available in up to 4 Mb 30-pin SIMMS. Nibble is four bits. Page is 1 bit. The Atari board will work in nibble mode.

One might call Techworld, who, in biz.computer.other, say they have been making memory since 1986, to learn if anything bigger than 16 Mb x 8 has ever been made in 30-pin SIMM form.

Unless something new and unexpected turns up, the TT ST-ram is 10Mb, with 8 Mb useable, and TT-ram is 128 Mb, with a third-party daughterboard, and 16 Mb with Atari's daughterboard. What the AixTT board can do is whatever it can do, which seems to be 128 Mb, also. Is that enough?

Evil has no boundaries <chrishinds@delphi.com> wrote:

A true TCP/IP stack with PPP is in final beta. It is called Termite and is developed by Bob at Oregon Research. He is in final beta and expects to ship it by the end of May 1997 (or earlier).

Termite TCP w/PPP for Atari is bundled with the following clients,
Termite Mail
Termite Telnet
Termite FTP

Est. street price 50.00-60.00 US.

Shortly after releasing Termite TCP, the following products will be released,

Termite Mail PRO
Termite Telnet PRO
Termite FTP PRO
PRO Client Pack
Termite News

A complete developers kit for accessing the Termite TCP kit will be, or is already, available for third party developers. CAB has been beta tested with Termite TCP and support will be supplied for this client.

For what my opinion is worth....

So, although it is not as complete as some PC/Mac kits, ie: Real Audio, Shockwave etc., these things may show up as third party developments. As it is, this PPP capable TCP/IP offers all of the tools needed to really enjoy the majority of today's websites.

Because of the very nature of the Internet, new toys are constantly becoming "All the rage" and are fading just as fast. By not having RealAudio or ShockWave, you are not really missing out on much as far as I can see.

All the best,
Chris @ Computer Direct

Hello,

I am posting this because I am a user of NVDI 4.10, who really knows NOTHING about GDOS, and I used the GDOS install from NVDI to install it. Now, it comes time that I have to change a font, and I have no idea how to do it. I read through the manual(if you can call it that), and I found nothing on changing fonts.

I did use the CPX's to make sure all was there, but there is no option to change the fonts. Can someone please e-mail me and possibly help me through this??

I appreciate this, a lot!

Joseph

My only advice to you would be "if you do buy a PC, *don't* scrimp on it." You can get an incredibly powerful, fully-configured Pentium PC these days for under $2000 (I'd suggest you look at Dell and Gateway, with Dell being my personal choice). Don't get less than 16 MB (I'd recommend 32MB) of RAM or a 1.2 GB hard drive and a 15" monitor (I'd recommend 17" if you can afford it), since both of these options on a new PC will cost pennies compared to what they would cost if you updated them later (in fact, it's probably darn near impossible to even buy a PC these days without these options).

As for internet software, it's pretty hard to beat what Microsoft gives away for free in their IE 3.02 version (IE 3.02 browser, Internet Mail, and Newsgroup reader). Good luck!

-Keith

maybe, but Windows is still years behind unix.

>>And as for as the web, I have nothing, NOTHING!.

Why not? CAB is very nice: the ST is too slow for it to be really nice, but
it is well designed and I like it more than Netscape.

>>these other rumored commercial web-browers, how will they support stuff
>>like RealAudio and ShockWave...proprietary shit from the PC world?
^^^^^^^^^^^^^^^^
Yes, that's roughly how I'd describe them (I consider proprietary to be by
far the worse insult of the two).

>>to use my computer for the internet? Even if some super-fast Falcon Clone
>>comes out, there isn't any Internet software for it.
>
> again sad but true,

Not really. There is at least one good web browser, two good irc clients, a
couple of reasonable newsreaders, a good mail reader (but unfortunately
needing a different tcp/ip stack than the rest)

> well can you have both, far too many people get a pc and sell there
> atari for peanuts,

Agreed. An atari won't sell for much these days, so there is little point in
selling unless space is an issue.

> (unless needed).

I don't like programs doing non-standard things, and I particularly dislike
disappearing scroll bars. The missing bottom scroll bar I can cope with as
it is almost never needed, but I don't like the way it removes the right
scroll bar.

The Britannica says: 'only those century years exactly divisible by 400 (eg,
1600, 2000)' are leap years. 'For still more precise reckoning, every year
evenly divisible by 4000 (ie, 16000, 24000) is made a common (not leap) year,'

Yep that would be fine, you will have bought a Licence to use the
products, they should be the same versions though.

> ->send most of the system disks (obviously, I wouldn't be sending MultiTOS,
> ->SpeedoGDOS or Atari Works, as these are most certainly commercial programs),
>
> Whats the difference between those 3, and the other programs listed ?

These are commercial.

> Are
> the others freeware?

Xcontrol, The CPXs & AHDI are in the Public Domain, I personally don't
know about the others.

> Or a better question would would be, "How could Atari
> package commercial software with their Falcons?".

They licence it from whoever makes it. The software isn't Free, the
price of the licence is included in the total price.

> This is a hot item with
> me, as I didn't get anything when I bought my used Falcon, not even the
> manual.

I really don't know how you stand legally. You can normally transfer a
licence by simply giving ALL copies of the software to another party, if
the person still owns the software then it would be illegal, if they

don't then I suppose that the licence would have been included with the machine and you are entitled to own the software.

According to threads that keep cropping up in a newsgroup I read it is only when the year is divisable by 400, your rule may be indeed be another way of working this out.

A 720k PC 3.5" drive should work fine, the socket may be upside down
though which makes it a bit more awkward.

> of bombs. The guy I bought it from said that there was a 68882 inside.
[snip]

Count the number of bombs.

If there are eleven, then this is a "Line-F exception".

Traditionally this is the result of the CPU reaches an FPU instruction and then sends it out to the FPU to process, but finding no FPU present, it passes control to the LineF exception vector.

Some OS's have an FPU emulator which uses the main CPU (in your case, the Falcon's inbuilt 68030) to emulate the FPU instructions whenever the Line-F exception is triggered and an FPU instruction is the cause.

However, native Falcon TOS does not. It simply points to the "display bombs and die" portion of TOS. And it does...

A second possibility is that the 68882 has "wiggled" out of it's socket over time, and is unable to be found by (or communicate with) the CPU.

Yeah me too, I'd respect someone for getting a computer that met their
needs rather than following the crowd. Surely a top of the range Atari
clone would be of much more interest than your agerage Pentium.

I've sent him a bug report. It works fine for rebooting, but has problems
when switching resolutions with CHGRES (NVDI ET4000 version) - "Memory Block
Destroyed by User Program" with MagiC5...

t> Hi there. I've just downloaded Shutdown 1.5 and will check it out. But
t> I'm curious as to what "AVSERVER.APP" does. It's also for MagiC 4 but
t> since my German is only slightly better than my Chinese, I can't really
t> decipher the text enough to tell what it's for.

MagxDesk that comes with MagiC4 doesn't support the AV-Protocol and MagiC 5
is an incomplete implementation. This can be seen with AV-TEST.

AVSERVER is an attempt at an external bolt-on for use with MagxDesk and MagiC
only. It also attempts to provide access as a Fontserver with the
appropriate ENV set in Magx.inf.

I was surprised to see that AVSERVER doesn't implement the complete range
either though. A summary in the format used by AV-TEST follows:

AV Server Protocol Status
~~~~~~~~~~~~~~~~~~~~~~~~
AV Server name: MAGXDESK AVSERVER
AV Server application ID: 0 7

AV protocol functions supported:
AV_SENDKEY: Yes Yes
AV_ASKFILEFONT: No No
AV_ASKCONFONT, AV_OPENCONSOLE: No No

Hi Robert, on 02 Apr 97 you wrote: ...respect, brethren
r>
>> What site is cab 2 available at? is it an ftp site?
r>
r> It's commercial.. PaYwArE.

I've heard several people complaining about how CAB will be commercial from
v2, but no-one quoting any prices.

I checked out ASH's Web page and there seem to be two prices:

ASH-CAB Aktion [for Power(?) Users] = 30DM (12ukp or 20usd)
ASH-CAB [for Atari Users] = 49DM (20ukp or 33usd)

I don't know what this "Aktion" thing means (maybe some subscription service
for regular buyers? - guessing) but it doesn't seem that expensive tbh.
(English prices are bound to be higher - that's expected nowadays...).

Joe Connor's Interactive scheme asked 6ukp for the Fairware versions
(including currency conversion costs), so I'm wondering whether people are
only making "noises" because it won't be available free in the future?

Alexander is one of the most solid programmers around and I certainly
wouldn't begrudge him and ASH this amount.

For information, from those people who are unhappy about CAB being commercial
soon, what is the problem?

FYI I haven't registered CAB so I'm in the same boat, although I have
registered other software he's produced...

There's a CD-based installation available from System Solutions in the UK
(possibly states-side resellers too) which provides a solid base. Not the
latest versions, obviously, but it can be updated from a working base.

I think X-Windows is the GUI for it.

2Mb on the motherboard plus either 2 or 8Mb on the upgrae board, yes.

l> The "TT Ram" is configured for 32 bit addressing and requires the use
l> of a daughter board situated on the left hand side of the machine,
l> which accepts four 30 pin SIMMs, which can be any value up to 64 megs.
l> Thus, the max amount of ram you can have in one of these machines is
l> 266megs - 10 megs of "ST Ram" and 4x64%6 megs of "TT Ram".

Is that right? Were there ever any 64Mb 30-pin SIMMs? I can't see any
available now...

AFAIK there's only room for 4*4Mb 30-pin on the Atari boards, up to 8*4Mb
30-pin on the GE-Soft boards before you get to the 72-pin SIMMs available
with the AixTT board - 2*64Mb maximum possible from what I can see.

I found your original post to be somewhat incomprehensible, myself.
Maybe I'm dimwitted.

B > I just hate when holier-than-thou windbags post nonsense
B > concerning FBI raids and whatnot.

Well, that's nice and friendly. Does this look like alt.flame to you?

B > as a former President of two 100+ member Atari users groups,
B > let me tell you that every person I've EVER met who owns an ST
B > has had more pirate software than store-bought software.

'Everybody does it.' Famous justifier number one, I suppose.

Now you have 'met' me. I have more store-bought than pirated
software. Lots more, as I have about ten feet of bookshelf space
devoted to manuals and boxes. I can count the pirated items on the
fingers of one hand. And I am working to pay for those.

B > I am also not a "hardened pirate", as you chose to label me -
B > I'm just interested in some old software, that's all.

Show your interest - pay for it!

Let's try to bring some sanity to this. Copyright laws are an
attempt to provide a 'property right' for writers, programmers, and
other artists. This is done so as to make it more possible for them
to make their products, and for us to enjoy them. If everything they
write, program, draw, sing, or sculpt becomes immediately public
domain, they will have to get 'day jobs' to support themselves,
instead of producing more of their chosen product.

In the light of the above, and the fact that the continued health of
the ST platform, such as it is, is dependent on the continued output
of programmers working on the platform, and the fact that several
(many) of the denizens of this group /are/ shareware and commercial
authors... it is not hard for any reasonable person to understand
our attitude here on csas. We want more output from them, and less
piracy justifications from the clueless.

I am not perfect. I am not a saint. But this has nothing to do with 'being good' - it is a practical matter. I want more software, not less, so I oppose piracy. I pay shareware fees and buy commercial programs because I want more of them.

As a side note, I am tempted to point out that most, if not all, 'morality' has roots in practicality. Defy moral codes at your own risk. Just because you can't see the risk /to you/ doesn't mean it isn't there.

Hi Martin,

I'm not sure why maito: didn't work. I can't remember what was the first combo of CAB/STiK to support mailto. I think it was CAB1.31/STiK1.08. As I mentioned I don't use GlueStik. GS may emulate a previous version of STiK and just doesn't support mailto. As no one has responded, you may be out of luck ;). The author of GS has responded to posts here in the past, maybe he knows. It may have nothing to do with GS at all.

I was kinda reffering to the 8bit software at that point in my
dissertation, since there is such a similar topic of conversation between
c.s.a.st and c.s.a.8bit I got the groups mixed! =)

But, i do feel that older games that are not even availible from the
original company (or person who has the rights) should be freely
accessable... besides is one person owns 1000 copies of a game and I can't
find them than it still does me no good!

Will (old Atari Programmer, both 8bit and ST)

I find that the ultimate is irony...

Here the software people fight piracy claiming it costs them thoudands of
dollars a month or somesuch and them to *make* a profit that actually
endorse piracy by asking for pirated copies of the games they *OWN*... what
if no one pirated? Activision would of been alot of programs short and may
have never made the CD and made even more $$$...

so my point here is, if piracy is a really bad thing to do why do the big
games houses endorse it by asking for pirated software???

Will

309. CAB 2.0 opinion...

Newsgroup: comp.sys.atari.st
Date: 1997-04-05 00:00:00 UTC
From: pwillis@hondo.cyberverse.com
Message-ID: <860229386.679480@rodelo.cyberverse.com>
Source record: 124612

I did a side by side comparison of CAB 2.0 and CAB1.5 and I think that CAB 1.5 was actually faster in some areas. One example is when displaying pages with animated .gifs. The speed and quality (actual number of frames displayed per unit of time) was higher with 1.5. The 2.0 version seemed to skip some frames that 1.5 did not making 2.0 look 'jerkier' and less smooth.

Another two things that 1.5 did _much_ faster were switch between 'icon' bar & non-'icon' bar and engaging the STOP button.

One other thing I noticed (although not speed related) was that some 'local' links that 1.5 had no problem interpreting were causing errors in 2.0.

Of course on the plus side there were many reasons why 2.0 is better such as the ability to open new windows, the frames ability, and of course the smaller side scroll bar and missing bottom scroll bar (unless needed). I also like the 'forward' button.

All in all I am sure those few problems above will vanish in time.

Cheers,

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 04/04/97
---------------------------------------
I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SOFTWARE:

ATARI ST COMPUTER:
------------------
New diskette(s) [still shrinkwrapped!]:
$ 6.00 Arkanoid (Taito)
$ 6.00 Art & Film Director (Epyx) -- $4 shipping, due to weight,
counts as 1st item
$ 5.00 Battleship (Epyx)
$ 3.00 Bobo (Infogrames / Terrific Software)
$ 5.00 California Games (Epyx)
$ 5.00 Championship Wrestling (Epyx)
$ 3.00 Crash Garrett (Metal Hurlant)
$ 5.00 Death Sword (Epyx)
$ 4.00 Devon Aire (Epyx)
$ 4.00 Dive Bomber (U.S. Gold / Epyx)
$ 3.00 Dragon Scape (Free Spirit)
$ 4.00 Final Assault (Epyx)
$ 5.00 GFL Football (Gamestar)
$ 4.00 Golden Path (Firebird)
$ 4.00 Goldrunner II (MicroDeal)
$ 5.00 Impossible Mission 2 (Epyx)
$ 5.00 Karateka (Br0derbund)
$ 4.00 Knight Orc (Rainbird)
$ 5.00 L.E.D. Storm (Capcom)
$ 4.00 Lands of Havoc (Antic Software)
$ 5.00 Last Duel (Capcom)
$ 5.00 Man Hunter: New York (Sierra)
$ 3.00 Mean 18 Famous Course Disk Volume II (Accolade)
$ 5.00 Metro Cross (U.S. Gold / Epyx)
$ 5.00 Paint Pro (Abacus Software)
$ 4.00 Prime TIme (First Row)
$ 5.00 Quadralien (Spinnaker)
$ 5.00 Renegade (Taito)
$ 5.00 Space Quest: Chapter I (Sierra)
$ 4.00 Star Quake (Terrific Software)
```

$ 4.00 Star Ray (Logotron)
$ 7.00 Star Wars (Br0derbund)
$ 4.00 Stunt Track Racer (Microplay)
$ 4.00 SwiftaR (Accustar)
$ 5.00 Techno Cop (U.S. Gold / Epyx)
$ 5.00 The Advanced OCP Art Studio (Rainbird)
$ 5.00 The Games (Epyx)
$ 4.00 The Pawn (Rainbird)
$ 4.00 The Sentry (Firebird)
$ 6.00 Tower Toppler (U.S. Gold / Epyx)
$ 6.00 Warship (Strategic Simulations, Inc.)
$ 5.00 Winter Games (Epyx)
$ 5.00 World Games (Epyx)
$ 5.00 World Karate Championship (Epyx)
$ 4.00 Zero Gravity (MicroDeal)
$ 4.00 Zynaps (Hewson)

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. I have been in
business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted (also, please check out my want lists,
since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

To reserve any item(s) listed here, please do the following:

1) carefully read the SALES CONDITIONS section first,
2) send me a list of the items that you are interested in,
3) include your full postal mailing address (this information is
for internal VGA use only)!
4) I will reply with a shipping information message for your order.

Thank you!

>(English prices are bound to be higher - that's expected nowadays...).

They intend you already own a program bought from them, so you have a
better price if you are already a customer of ASH.

hmmm well 8bit or not, its an age old problem/debate/argument ?that I
personaly doubt will ever be resolved,
I just suddenly thought of the private user wanting to resell what he
bought and wondered why it had never been mentioned,

I personally favour the recent idea in here about getting a group
together who would contact all the old companies and see about getting
there old software into the public domain or whatever, but not heard
anything about that in ages, ... must have just been talk ?

>dissertation, since there is such a similar topic of conversation between
>c.s.a.st and c.s.a.8bit I got the groups mixed! =)

I have a feeling the same thread will probably be in Acorn, Spectrum
and other places as well :)

>Will (old Atari Programmer, both 8bit and ST)

is that old as in been programming for ages... or old as in like me
hehehehehehe

<chrishinds@delphi.com> wrote:

>I want to use a computer for (the internet), is the one area in which Atari
>computer are years and years behind PCs.

Sad but true, I found the software usable, I surfed the web, emailed
ftp irc the lot, all with my ATARI STe, but if you want to compare it
to the Microsoft stuff then yes you are correct, miles behind?

>I've been trying my best to use my Falcon, but for christ's sake, right now

>And as for as the web, I have nothing, NOTHING!. I do my web-surfing from

Well I was reasonably happy with my ATARI setup, and I was browsing
the web through a text based shell account as well,

But what I find strange about your post??. I then saw CAB running on
the falcon accessing the net, I knew in an instant that I had to
upgrade to a colour browser :)..I went for a pc, but it was seeing it
on a falcon that made me want to upgrade? and you have a falcon....

>these other rumored commercial web-browers, how will they support stuff
>like RealAudio and ShockWave...proprietary shit from the PC world?

yes exactly, theres no denying its there, i use both the above, a bit
of a novelty, but best to have and not need, than to need and not
have,

>I really, REALLY don't want to have anything to do with the
>Micro$lut/WinDoze/Outel world of crap, but do I have any choice, if I want

One question, how do you justify calling it crap, and all the rest,
yet in the same breath say you want it ???

>to use my computer for the internet? Even if some super-fast Falcon Clone
>comes out, there isn't any Internet software for it.

again sad but true,

>Help me out people...what are your opinions on this subject?

well can you have both, far too many people get a pc and sell there
atari for peanuts, can you get a pc and keep your atari, I use my pc
for internet access and for word processing, the kids use it for
games, add the hours up and I spend MORE time on my ATARI than i do
the pc.. thats easilly more time,

Ho and although atari emulation is good on the pc, you will find its definatly not a replacement ?

>I've got to do something soon, 'cause the set-up I have now is really
>pathetic. When you can't even print from your e-mail program, something is
>seriously wrong.

for internet access you can use a 386 and still have all you want, get a cheap pc and dont sell your atari, because you will regret it, i mean that in a nice way, i know lots of people who went that way, and they all wish they still had there atari... as mines worth next to nothing then the choice is easy to keep it :))

>Long Live Atari!! (but where are the Internet applications?)
>
>An Atari user since the 400 with an 810 tape drive,

800xl with the nifty cartridge slot in the top here :)) but i really can never see a time when there isnt an atari in this house, but i do hold my hand up to prefering the pc for internet access ?

This post asked for opinions...These are mine <smile>

Can anyone reccomend a good ATARI ftp site, a site that will upload your software from incoming to the appropriate directory within a few weeks..ahem!....maybe even a few days:), one that does not have access restrictions and is reasonably reliable, I don't need fast connection, just reliable?

I have been using cnam.fr but public access is becoming a bit restrictive, and funet.fi seems to leave everything in \newitems for months on end?, demon is lacking in atari folders, hensa seems all but dead..nice new front end, but empty folders?

So can anyone reccomend a all round good ftp site that has a diskmagazine section ??

.

Complaining? hmmm these will be the people who have used it for free
for a year or two

>Joe Connor's Interactive scheme asked 6ukp for the Fairware versions

I registered mine through Dannys scheme on the very weekend stik was
released, I am pretty sure if memory serves me correct that the
intention has allways been to eventualy make CAB commercial, I am damm
sure that was the original intention?

Also, the package I paid for, I since found out that NO money went to
Alexander, only to STICK, CAB OVL, and something else, but nothing
went to alexander, that was at that time... what now?

>(including currency conversion costs), so I'm wondering whether people are
>only making "noises" because it won't be available free in the future?

I think thats a pretty correct assumption :)

>Alexander is one of the most solid programmers around and I certainly
>wouldn't begrudge him and ASH this amount.

Same here, at one point I wrote asking if I could use CAB in a pd
release of a diskmagazine as the shell,because it was all html stuff
from the net for offliners, he responded by sending me a special
version just for that purpose minus the internet stuff and with his
blessings.. you cannot get better than that from a programmer, and can
hardly be labeled a money grabber,
I'm with you Harry, not for ASH..but I hope Alexander got a good deal
out of it:)

>For information, from those people who are unhappy about CAB being commercial
>soon, what is the problem?

Used to a good thing for too long ?

>FYI I haven't registered CAB so I'm in the same boat, although I have

Harry I am shocked!....giggle giggle

>registered other software he's produced...

Ho your forgiven then :)

Great...Yes I only found out later that booting from Low is advisable
from a Falcon, and have mentioned that somewhere on the page:)

>>I just ran the prg from my HD or RamDisk and that was it. I know CiH had
>>some reservations about the Falcon setup, but whatever you did works fine.

Yes this and all STOSSER software should run from a anything now, no
more incompatability problems :), BUT I must point out that any
applause for STOS software of any type being ultra compatable must go
to Anthony Jacques who has upgraded the compiler :)

>>I spent about two hours reading all the messages, etc. and enjoyed every
>>minute :) You Brits have a unusual sense on humor. I guess that's why I
>>like your sitcom's so much; Red Dwarf, Faulty Towers, Dr. Who, Blake's 7...

heheeh guess what?...I may be wrong as I dont watch it, but DR Who is
not a comedy hehehe hmm open to debate I suppose, but the intention is
not supposed to be comedy... hehehe the ideas makes me laugh though:)

>>Of course, I guess your impressed by our export, "Baywatch" :)

Watchable if you turn the volume off.;-)

Actualy the BEST and FUNNIEST program on television IMHO is from over
the water.....

3rd Rock From The Sun.........Bloody Brilliant! :)))))

322. Tandberg 3260 Tapedrive with ICD Link2/STE

Newsgroup: comp.sys.atari.st
Date: 1997-04-06 00:00:00 UTC
From: chrisc@zetnet.co.uk
Message-ID: <5i7rmg$oot@irk.zetnet.co.uk>
Source record: 124425

Hi People,

I've just got a Tandberg 3260 tapedrive and want to use it with my STE...unfortunately the only tapedrive software I have so far is Tapebios...it is a TTP and I haven't got a clue how to access anything....apart from the test routines that is...Does anyone know of a GEM utility or an ACC that can drive this kind of thing, the tapes it takes are 60/150Mb depending on tape length and some kind of internal compression routine I believe. My hard-drives run from the basic Link drivers and my CDROM is using Extendos, if that helps.... Please reply via email to me rather than to the group, I don't get particularly regular access to the groups and my reader only supports the last 100 postings, so I'd probably miss it....

Any help greatly appreciated and many thanks in advance.

chrisc

What device are you trying to send to,what version of X-or,how many
ports do you have on your machine?

I've been using X-or for years (V2.0) I don't have to use the boot
disk at all.Can't remember off hand ,but I think Dr T removed copy
protection from most of their later software.

email me if you are still stuck.

The Internet applications are coming out slowly. I'm using CAB with STIK via a SLIP connection. I think what we all really want is a port of Netscape or an exact Netscape clone, and a good PPP dialer/tcp/ip stack. I haven't found a good POP3 mail client. So far, the only POP3 client I can use is NEWSIE. Antmail refuses to work with my ISP's POP3 server.

If there are enough of us Atari/Falcon users, maybe Netscape would do a port of a Linux version for the Atari. They could take orders and say that when they receive n number of orders they will do the port. Maybe I'm, just dreaming.

I would rather support the regular Atari developers. We need to all get together and figure out how to financially support their efforts. I would be happy to pay in advance if I could get something like Netscape (WWW, mail, news) -- an integrated internet application.

I heard a rumor that one of the Atari dealers on the West Coast is working on an internet application due out this Spring. Stay tuned.

Hi Greg, on 05 Apr 97 you wrote: ...respect, brethren
b>
b> Side note - as a former President of two 100+ member Atari users
b> groups, let me tell you that every person I've EVER met who owns an ST
b> has had more pirate software than store-bought software.

I hate this whole debate tbh, but there's something I really have to comment on here...

I note that you are a former President of user groups. I assume that these groups are also in the past tense.

Several years ago, while an 8-bitter, I attended a very active user group in Birmingham, England which was also very active in its weekly meetings, but which I stopped attending because I got rather sick of the software copying that started in the first minute and carried on until the end of every meet.

This group also falls in the 'former' category...

If you can do the simple arithmetic you can work out why 'former' is the operating word in all those statements. No-one's going to develop for a platform where no-one buys - the only reason that the PC world gets by, despite all the problems associated with that platform, is that there are institutional buyers who make the market sufficiently reliable to overcome it. As such, it's worth developing for PCs further.

The Atari platform, thanks to Atari's ignorance of the institutions, never had that kind of reliable backing except in Germany where their enlightened approach resulted in a far greater longevity for the platform and an accompanying respectability that's sadly lacking in the English speak

I've been involved with the UKAAUG for just 18 months now and with all the groups that I've attended the one clear principle that exists with all those groups, and the new ones that form, is that they all have a very clear principled position *against* the pirated copying of software.

Everyone brings in their own gear and demos the software that they have and that's how people see programs in operation before they buy (if you're listening Mr Fisher). It's much better to see software being used by people who shelled out for it and have a need for it and thereby have some proficiency in using it, than to rely on buggy copies of cracked software with no docs to give any indication of how to use it effectively. There are often demo versions available as well for you to take home and play around with.

That's the way the market will survive in any way at all. That's the way to ensure that serious products, whether productivity or games, will continue to

be brought to market and made available to English speaking users from the one last place where products continue to be developed - ie Germany (with one or two honourable exceptions).

There are already plenty of software products in Germany that we haven't a hope of seeing because the frivolous market that was encouraged over here and in the US by Atari themselves has eroded to such a degree that the cost of translation will make that product unrealistically priced to the remaining users. The more people we lose for reasons like this will only accelerate the decline.

Personally, you can do as you please. Your attitude that 'the market is already dead so it doesn't matter if we kill it a bit more' is one that others in here are culturally opposed to. That's why *we* are still here and why your attitude is opposed.

IMHO if you want software of the type described you'd be much better served by switching platforms to the PC, where so much more of it exists, and impose your barren morality on *them* if you have to impose it anywhere at all. *We*, the remaining hordes, can't afford your attitude infecting the remaining market. *I* want to see more products arrive here without fear of people like you diluting the waters. By all means stay if you're prepared to be a responsible contributor. If you can't afford either to stay or leave I suggest you take up hobby with less related expenses and that affects fewer people's livelihoods - try Table Tennis.

b> I guess most of you guys on this newsgroup are the exception to this.

I've certainly had products come my way, but without exception I've gone onto buying the full version or deleting them. I treat them as if they were demos - if I use them I buy them.

b> I'm sorry if I've offended anyone on the group, espescially the people
b> I've talked to via email. But to the author of the piracy how-to
b> above, well sir, we obviously have nothing in common - intelligence
b> included.

Nice sentence. Only a pity that it's a double-edged sword...

Thanks for the info on 80ns simms working. The reason I ask was
because someone was selling 4 - 4megs simms for $45. By the time I
found out 80ns would work, they were sold. I would love to get
nibble-mode simms but they cost $50 each and I see standard 4megs
simms for sell on the net for between $10 and $15 all the time.

>
> a> I know about not using 3 chip simms.
>
>I don't. What about them?

The 4megs simms come with either 3, 8, or 9 chips. The 8 chip simms
are non-parity and 9 chip simms are parity. The 3 chip simms emulate
parity and have timing problems. Most people have problems with them.

hmmmm shame it wasn't then?

> > Although AC should have an opinion, It should surely be stated that the
> > above is there opinion
>
>Whose opinion would you like them to state? Of course it's their opinion in
>much the same that you state yours.

WRONG!.....When I release an official press release in the capacity
of the ONLY uk paperbased magazine, and pronnounce that these are the
leading two diskmagazines, then its the same,

We and everyone else agree that AC should have an opinion, but like
us mere mortals it should be expressed as an opinion, Come on Harry
you know as well as I do that most people reading an official press
release will presume that the contents have some sort of fact behind
it rather than the opinion of whomever is writing it?, it's that
simple!!!

>AC have some standing and you also have a great deal in this matter as you
>SIG attests. The opinions are different, that's all...

Sorry Harry you don't seem to be able to see the difference between a
Personal opinion, and an officail press release,

How you cannot see the difference is absoloutly amazing mate ????

> > as otherwise the above statement is doing the very LARGE worldwide ATARI
> > diskzine community a gross injustice?
>
>I doubt it very much.

And that of course is your opinion, or is that the OFFICIAL stance of
the Association Of ATARI User groups...I would hazard a guess its the

former........Begining to see my point now ?

Lets clear this a little, this is not an attack on AC in any way, I made that absoloutly clear when this problem first arose,Its also not an attack on whomever wrote the press release, And I have already stated many times that i think both diskmagazines mentioned are top diskmags, Taken to the vote these two diskmags may win? I don't know..............but then niether do AC ?????????? and its unfair for the other diskmags (hey and you have a list if them there) not to be even in the running,

At the end of the day it has already been agreed that it could possibly have been worded better, that was weeks ago... then up it pops again exactly the same ???

Why can't you see that there is a world of difference between an Official press release, and a personal opinion>?..you suprise me Harry:) ?

You still love me though don't ya Harry...Don't cha! hehehehe :)))

.

Yeagh, tried all weekend, all I get after the initial not found, is
now theres a 250 people limit come back later... of course later is
never better,

At the end of the day, they are the ones doing us a service by having
the stuff there, but as my web page points to software on there site
its been kinda awkward on a busy weekend:(, ho well, will have to wait
and see what happens... glad to know its not just me being locked
out.. saves me getting paranoid..thanks :)))

ST+ Diskmagazine, The Only Monthly ATARI Diskmag!

Anyone having trouble downloading the brand new issue recently
released, from the ST+ Webpage, this is because of unfroseen troubles
at the ftp site its stored,

I have now uploaded issue 15 to the actual web page for direct
download so you can go back and get it without problems now:),
Unfortunatly due to the ftp sites problems, back issues may not be
available for a few days?

Go get it and Enjoy :)

.

> > > outputs (2 ea, although the Falcon's are slighter better quality).

Fine..If the Falcon meets the needs for audio production, great.
However, performance on the other platforms are increasing
rapidly and
prices are dropping. Espicially the Powermac 6500 line..

> > And you have benchmarked this? Whats your deffinition of near 6400
> > performance? Do you know what a 6400 is?
>
Yep..The 6400 is part of the defunct Performa line and has been
renamed
the PowerMacintosh. Processor speed ranges from 180mhz all the
way up
to 300mhz(!) for the 6500 line.

> Don't be such an idiot. I work on Macs daily, including said 6400.
>
> On the other hand, just how much experience do you have with the
> Falcon? Have you ever edited digital audio on one?

No, I can't say so..

> Also, I'm talking about OVERALL audio performance, not just processor
> speed.

True..but price/performance plays in the equation..The new 6500
just
blows away the Falcon..

> > The Falcons are stuck with antiquated 030 processor that needs a DSP.. All

> Nice try attempting to change the subject. The issue is AUDIO tools,
> not WEB tools or word processing.

Nice try to..The internet changes everything. Audio
minipulation on
the internet is here and the Falcon has not kept up. Even
Falcon
owners are pissed because they can't find decent internet
tools..

> > > I will say I've had far more crashes on my Pro Tools III system

> want it to do. It does, for less money.

True.. People should buy what ever they think is best.. But
the
Falcon technology needs to be upgraded and the pricing should
reflect
the state of technology. The Falcon has been stereotyped as
just a
midi box. Imagine what would of happened if a million were
sold..
Falcon users would of have not complained about the sorry state
of
internet and web tools..

> > I bet that Cubase Audio VST/Mac system out sells a Cubase Falcon one. So your

True.. The new Virtual PC by Connectix will alow PowerMacs from
the
lowly 601 series to run Wintel 3, 95, Dos, OS2 and NextStep at
higher performance than SoftWindows.

>
> Why, oh why, can't some small, daring company buy the rights to TOS,

They would also have the option to run Mac OS to use the
wonderful
internet apps as well.

> I see Mr. Sinclap has returned to accurse the TOS groups with yet more
> "expansive Hades" stuff. <sigh>
I wasn;t much of a speller. Atari users do need hardware relief
because the current TOS boxes need a mortgage to fund one.
Atari
Tos users are in the same boat as Mac users were in the 80's..
You
needed a loan to fund a Mac..

Ummm... one small correction. In a very recent PC magazine (US), I read one small item that stated that OS/2 had gone the entire previous year (1996) without a decent webbrowser.

I would say 'months and months behind', not years. And if MS can't fix its bugs faster than it manufactures them, ASH-CAB may yet get out front.

Unfortunately, the exact contents vary depending on which compiler
was being used. However, you should be able to find everything in
the Atari Compendium (which you will need anyway).

p > Do you realize that this is also available as a Cd-Rom.

I was dissapointed by the CD-ROM version. Basically, it's nearly
identical to the print version (as opposed to aggressively using
links or sizing the material to fit the screen). Also, using CAB
takes about 10 seconds just to format each page, and you have to
scan though many pages of contents or index to find anything, which
is not what I would call a "quick reference."

Source record: 124452

Hi Nicholas, on 05 Apr 97 you wrote: ...respect, brethren
b> THE ATARI ST QUICK FAQ
b> ----------------------
b>
b> Draft v0.4 - March 28th 1997
b> Nicholas Bales - bales@garonne.stortek.com

Getting better B^{)

The markings for those items that have changed helps...

b> Processor
b> Motorola 68000 (68030 on TT and Falcon) processor at 8Mhz (16 on
b> MegaSTe and Falcon, 32 on TT030)

The Mega STe actually supports both 8 and 16MHz.

b> Ports:
b> Cartridge, Midi In, Midi out, Parallel, Serial, Monitor, Disk Drive,
b> ACSI (proprietary hard drive, except Falcon), TV antenna (on RF
b> equipped models), RCA/CINCH stereo (from STe on), Joystick/Mouse,
b> Analogue joystick (on STe), SCSI (Falcon/TT).

Still no mention of the LAN port on MSTe, Falcon and TT models...

b> Name Speed RAM R TOS Floppy MBESVKTC Comment
b> --
b> TT030 32/030 2-266MbS 3.06 1.44Mb E VKTC Various mem/HD configs
b> --

I still think the memory issue is unresolved. I would only be certain of a
maximum of 10Mb STRAM and 128Mb TT-RAM unless someone can certaibly say
differently.

b> * 1.2.3 VGA, SVGA or multisync monitors
b> -----
b> First of all, you need a monitor that supports the following refresh
b> rates :
b> ST High ST Low/Medium
b> --
b> Vertical refresh rate 70 Hz 50 or 60 Hz
b> Horizontal refresh rate 31.5 Khz 15.75 Khz

I think I'm right in saying that the vertical refresh in ST High is 71.1Hz
-can someone confirm?

Also, note that it's only possible to connect a VGA/SVGA to a TT - the
standard ST monitors can't connect.

Finally, the ST High resolution supported by the TT is duochrome rather than monochrome. That is, any two colours from the palette of 4096 can be used in ST High.

b> 1.3.2 Atari Language disks
b> -----

There were other options here. I'll tru to dig this info out...

b> The correct memory type is 30 pin SIMMs, minimum speed 120ns, with or
b> without parity, 256Kb or 1Mb.

The minimum speed of 256Kb SIMMs is 150ns. 1Mb SIMMs is correct at 120ns.

b> Because of a bug in TOS, STEs will not recognize a 2.5Mb configuration
b> (2x256Kb + 2x1Mb) without a small AUTO folder program called simmfix.
b> This can be found on any FTP site, but is quite unreliable.

Others are more reliable. Namely Silkboot, so I'm told...

b> 2.2.2 SCSI hard drives
b> -----
b> In order to use these, you need a SCSI Host adapter that connects the
b> SCSI drive to the ACSI hard drive port on the Atari. There are several
b> models available depending on whether or not you need parity, whether
b> or not they are for external or internal drives.

The Mega STe specifically requires parity to be disabled.

b> The 2 most common SCSI host adapters are ICD's The Link II and the
b> Link'96 from Norbert Wieczorek.

And also the Atari versions as used for the MegaST and Mega STe.

b> 2.2.3 IDE hard drives
b> -----
b> There seems to be actually no way to connect an IDE drive to an ST. You
b> need to go the SCSI way.

The latest issue of Atari Computing (issue 4's just dropped on the mat) has an advert from TUS stating that an IDE hard drive interface will be available for STe's (only?) in late April/May. This is the first I've heard of it...

b> 2.2.5 Hard disk driver software
b> -----
b> In order to get TOS to recognize the drive. AHDI is Atari's Hard Disk
b> Driver an can be obtained free from any good FTP server (see section
b> 2.2). However, it appears that it is not as reliable and efficient as
b> 3rd party driver software such as ICD Tools or HD Driver.
b>
b> It seems that some drivers are not compatible with some drives while
b> they sometimes give better performance on others.
b>
b> (Input needed)

I wouldn't say that AHDI is unreliable in any way, although some versions
have bugs (what doesn't). I'd say 'not as capable and efficient...'

Regards, Harry Sideras - UK Association of Atari User Groups

It's not; 2+2+0+0 = 4, but 2200 won't be a leap year. As you say, a century isn't a leap year unless it's divisible by 400. This gives us an overall average of 365.2425 days a year, which is very close to the exact number of days it takes the earth to revolve around the sun.

Funny, my experiences are mostly the opposite. The Task Bar has
more than just the Start button, like buttons to select between active
programs. Yes, its placed at the bottom of the screen, by default.
But you can drag it to any of four sides of the screen that you like,
though: problem solved! BTW, I *like* that "stupid Start button",
although I prefer to invoke it from the keyboard (CTRL-ESC) and walk
the menus with the cursor keys. As far as "byzantine file ops", I
keep the Explorer active all of the time (available with a click on
that darn task bar), and find it similar to (but more capable than)
UIS. And you can make Explorer work in an icon mode (like the ST), in
a more verbose mode (ala UIS), or a couple of steps in between.
Installing and deinstalling major programs, yeah, you're right there -
they're pretty darn complicated and lots of files to be accounted for
(or orphaned ;).

I've been in the PC world for 3 1/2 years, but I had an ST for 7
years prior to that. In my PC experience, Win3.1 was barely
functional, Norton Desktop made it much more ST-like and useful to me,
OS/2 Warp didn't do much for me, and Win95 has been the most useful
and stable PC GUI I've used. YMMV (significantly!) :)

I've used Gemulator since I got my first PC (didn't have the space
to have two computers set up), and it has pretty much fulfilled my
Atari needs (mostly Pagestream DTP nowadays). I've spent more on
computers since joining the PC world, but I think I've been more
active and productive as well, so I think I'm getting my money's
worth.

I like some niche markets (model rockets, auto racing sims) and
that's (PC) where the developers are (both free and commerical). The
old argument of "but you can get any basic program (WP, SS, etc.) you
need for the ST (or Mac)" doesn't hold much water for me. I want
these niche programs and the PC world is the only place I can get

them.

Anyways, good luck with your decision. The guy who suggested a cheap used PC (not a 386, though, definitely get a 486, still cheap) and keep your ST probably had the best solution for you, although you have to evaluate your own needs.

Doug Kendall <dkendall@facstaff.wisc.edu> scribbled thusly:

D > I broke down and bought a used HP DeskJet 500 this week, and
D > hooked it up to my 520STFM

Congratulations! I've used a DJ500C for 3+ years now, and have been totally satisfied.

D > Or is my only real choice to go out and buy NVDI or SpeedoGDOS?

It seems to me that there was a program (TurboJet?) that was a GDOS printer driver for the DJ, but don't quote me.

D > Will they come with drivers for a Deskjet 500?

Speedo 4 certainly does, and I recommend that you go that way (or better, but I lack experience). Atari Works, Speedo 4 and the DJ create output comparable to (or better than) PageStream. I think that we will see more and more apps that are dependent on, and produce excellent output with, GDOS. So it behooves you to invest in Speedo 4, 5, or NVDI.

Okay, Nick - here are a couple more.

2.2.1 - Supra and maybe others also made shoebox drives that had
acsi cables; plug and play.

2.3 - Any 3.5" pc 1.44 floppy drive can be used as a double density
(720k) Atari drive. It needs to be jumpered to 'drive 0' (it will
ordinarily be set to 'drive 1' for a pc). Recently, there have been
reports of drives that cannot be changed easily to 'drive 0'.
Physical mounting may also present problems, but they are not
insurmountable.

And one spello:

Software 2.1

B > If you still wish to ask for pirated software, do so at you're
B > own risk,

Should read 'do so at your own risk'.

And how about re-numbering so that 'Software' is 2.xx, 'Hardware' is
3.xx, and 'Connectivity' is 4.xx

Lookin' good!

Hi there!

This is Chris Wilkinson using Marcus Finlays account (yes he doesn't mind about it!! :). I was wondering if any Nemesis owners have benchmarked POV-ray with and without their Nemesis running. I would be interested in seeing what difference running the FPU at 48MHz would make over running it at the standard 16MHz, especially using POV-ray. It would be nice if someone could tell me what % increase in speed I could expect using POV-ray from 16MHz to 48MHz...

Replies to this email address, but quote Chris Wilkinson (my name) when you reply please...

Thank you,

Chris W.

365. falcon SCSI hardware fix

Newsgroup: comp.sys.atari.st
Date: 1997-04-07 00:00:00 UTC
From: Wes Nakamura <wknaka@trinidad.stc.housing.washington.edu>
Message-ID: <Pine.LNX.3.94.970407021825.413R-100000@trinidad.stc.housing.washington.edu>
Source record: 124375

Hi all,

How can I tell if my falcon has had hardware fixes? I'm thinking specifically about the fix that solves the SCSI problems. As I'm planning to use my falcon with cubase audio, this is a big issue.

The guy I bought the machine from says it's had a clock fix and a SCSI timing fix, but I've been having problems. Specifically, during hard drive access (afaik it's only during writes), the machine freezes (although the bee-pointer will still move), and the hard drive busy light stays on. This mostly happens when I'm transferring large amounts of small files (this isn't usually mentioned when people refer to the falcon's problems). However, it only happens if I run under 256-or-higher color mode at high resolutions, which is exactly how the problem is described in the manual of my new copy of hddriver. The hdd worked perfectly before in a TT.

So how can I tell if the fix has in fact been done? I've looked over the motherboard but can't see anything that looks like it was obviously tacked on later. Anything like a software util that will push the machine and will reveal if the SCSI is working properly or not?

How many different hardware fixes are there anyway? I've heard of SCSI, clock timing, DSP, line-level input/output, and bass boost. Are some of these the same? (clock/DSP, etc...)

I'm also having plenty of problems with my cdrom. I don't know whether or not it's related to the SCSI problem. This is also important, as my interet access is pretty slow, and I went though some expense to get some Atari cdroms. I'm also having some problems with mint (with memory protection) and mint's cd-rom drivers, and various other things, but I guess that's for another day. (You'll probably be hearing about both of these in a few days' time :-)

ATB & TIA,
Wes.

No.
A century year is leap year if the number divides by 400. So 2000 is,
but 1900 and 1800 were not. But this only applies to the Gregorian
calendar. So before Gregory worked all this out, things were
different...

Does anyone who what my problem is with my falcon 030.

When switched on :-
Fan works
harddrive spins up
power light goes on
sound initialises

But only a black screen appears with 2 white lines.

Tested all sorts, Such as memory, harddrive etc but they work

Also have a 68881-2 installed but don't know is that is what is causing
the problem.

Please help!!! Urgently, i've got work on the harddrive to be printed,
but can't get access to files.

L.S., Utrecht 4.7.97

I hope someone can give me any information that can lead me to an answer concening the questions stated at the end of this mail. Infomation could be: internet sites, book & article references or even a direct answer.

My intension is to use the theory, I find this way, to give a good solution for the problem of Time Stretching or Time Scaling. Even if you aren't familiar with these things it is possible that you can help me, so please do read the questions. (Even if you can only answer the question partialy.)

All the questions are related to Time Stretching, Psycho Acoustics or Mathematics.

Well, here we go:

1) Are there transformations, other than Fourier, WFT or STFT, that give a useful description of soundsignals (as we humans hear them)? (keywords: evolutionairy spectra?)

2) What can be done with Wavelets?

3) In what way is the Instantaneous Frequency of a signal related to what we hear? (A question related to the former: Do we hear the (beating) signal sin(2000t)+c*sin(2004t) twice as high as the signal sin(999t)+c*sin(1003t) (c a constant) ?)

4) Are there overview articles of what has already been developed in relation to Time Stretching (Scaling)? (I only have an article about the Phase Vocoder (Dolson, M) and an (interesting) internet site: http://cnmat.cnmat.berkeley.edu/~alan/MS-html/MSv2.html.)

5) How do we hear(?):
-one sine (as a signal)?
-two sines (beats, AM & FM)?
-more sines (how to describe the AM & FM in these cases)?

6) Is there an 'extended version' of Ohm's (Helmholtz?) law?

7) How can Roughness be modeled mathematically?

O.k., that's it for now.

I hope you can help me, one way or the other.
I would be glad with your reaction.

Sounds like you might be having the SCSI DMA problems

> The guy I bought the machine from says it's had a clock fix and a SCSI
> timing fix, but I've been having problems.

Yes, I've had the Clock patch done also, with little/no relief with the
hard drive problems.

Do you get the message "output device not receiving data" or
something similar?
Re: HD Driver, try using HDUtil.prg with the SCSI verify ON.
When I tested for SCSI problems, I copied 4,000+ files and found 7
errors using Tree_chk.prg (that came with Kobold). That was with
SCSI Verify not selected in HDDriver.sys.
With SCSI Verify ON in hddriver.sys, I had zero(0) errors.

Well, I don't want to go into too much detail. The Falcon can also emulate an
STe. An STf can be accelerated. This was supposed to be Quick FAQ, and I think
I've already gone a bit too far on little hardware details.

hahahahaha, why not? your so full of yourself arnt you? , ho I hope
your going to stick around, your going to be real fun to get on with
in this group.....my spelling..hahahaahahahaha its a sodding
newsgroup? what do you expect?,

Why do i need to be literate,

ST Format, ATARI World, ST Handbook, PC Mart, all Magazines, all
accepted articles or tutorials from me, all had to spell check them ,
they took me seriously and did not complain about my spelling?, some
even paid me...hmmm only some....

The list of diskmagazines UK and German are too long to list, and
although not newstand or paid for, they all accept articles from me on
a regular basis, again not one of them complain about my spelling,

I ran a programmers diskmag for a couple of years, hundreds of people
wrote asking for tutorials, how to? and all manner of things, not one
of them returned them because they were not spelt right,

I could go on...but the point is, your observation is as pathetic and
pointless as your posting,

Now tell me again why i need to be literate....YA FOOL!

I didn't think so. btw I had the same problem on my STe and Mega, only
solved as far as I know by the fact that I now have very few Acc's and
Cpx's
on those machines. I'll test it out by copying all my Cpx's to my Mega.

Hello!

I am conducting an Atari Lynx auction! I did one earlier this year, and some of the people who have bid on items haven't answered me. I am therefore going to put up the remaining games for auction.

Please check my web page for the games and current bids(bids will be updated starting April 8, so don't pay attention to the bids on the page until after April 8.

Here is the URL:

http://msm.byu.edu/complab/emp/joshuam/lynx.htm

Please E-mail all bids to:

0jmorrel@msmlab.byu.edu

Thanks!!

Back in the post that brought Greg's rather vitriolic response I did in fact suggest such an outlet. It's pushing the bounds of legality a bit, but everybody would be happy in the end. (Bring on the idyllic music maestro)

Unfortunately, since Greg made an issue of my objecting to him turning c.s.a.st into c.s.a.st.warez, the whole thread got sidetracked. Or maybe not.

>
>Who can provide me with one??

Just about any PC dealer can provide you with one!
You can use a standard 3.5" HD (1.44Mbyte) disk drive. You'll have to turn
the 34 pin connector the wrong way round (cut off the notch that prevents
this from being done) and very important- short the disk detect switch!
I've been using two Sony MPF-520-1 drives so far with success (though not
in HD mode yet, but 720K works fine, which is what you were asking about).

389. STE TOS Switcher (Wanted)

Newsgroup: comp.sys.atari.st
Date: 1997-04-07 00:00:00 UTC
From: nar@globalnet.co.uk
Message-ID: <5ibf8d$pet@kew.globalnet.co.uk>
Source record: 124399

Does anyone know where I can get hold of a TOS switcher for an STE? Preferably in the UK. (I already have both TOS 1.6 and 2.6 TOS ROMs)

Alternatively does anyone have a UK version of a bootable TOS diskette of TOS 1.x

eMail nar@globalnet.co.uk

Thankyou for your help.

390. Re: How to tranfer ATARI Floppy to PC ?

Newsgroup: comp.sys.atari.st
Date: 1997-04-07 00:00:00 UTC
From: flook@globalnet.co.uk
Message-ID: <334c8eb3.1731730@news.globalnet.co.uk>
Source record: 124400

On 7 Apr 1997 12:17:20 GMT, "Helmut Herzog" <her@iitb.fhg.de> spaketh
thus:

>does anybody know, how to transfer a ATARI ST floppy to PC?
>Or much better, how to convert Worldplus Files to Word.

Use a 720K disc formatted on the PC, both machines can read them.
Don't know about Wordplus files, but if you can save as ASCII format
then any Wordprocessor should read them ok.

Just a thought, is there a FAQ for this group and is this question
listed? It seems to occur frequently!

flook

> ***************************
> But soon He'll be using a Hades 060
. . . in Hades?! :^)
thanks for the info (and you too Gerry!)
I set up my HD Driver with the SCSI Verify option ON, and retried the
above
a number of times with different files/partitions using Kobold(normal
mode,
verify off) and received _no_ errors! So it works with Kobold.
My concern with _just_ adjusting Kobold is that if
the problem is at the system level, and not just something to do with
Kobold,
then while Kobold may work fine, what of when you are saving files,
opening/
closing programs, saving configuration files, downloading files,. . .
???
You are not using Kobold then, and may have errors if it is a system
problem.
Next I am going to try copying using the desktop, but I expect zero(0)
errors

also
There are also fixes/patches I will do when I install Nemesis(as soon as
Chris
gets it too me, along with NVDI4 and HD Driver6)
and I've been told that a "good" SCSI cable will make a big difference,
but how
does one *know* if you're buying a good SCSI cable??
Someone suggested tha I buy a SyquestEZ, for the SCSI cable.
That's not an inexpensive cable! :^D
thanks.merci

Yes, I now that the bus frequency has nothing to do with the size of the
bus, but I just thought that since the TT-RAM is accessed over another
bus, it might be clocked to the same speed as the CPU. Anyone ?

Again, the issues are: Price, productivity, and numbers of outputs and inputs vs. price.

> > On the other hand, just how much experience do you have with the
> > Falcon? Have you ever edited digital audio on one?
>
> No, I can't say so..

I don't understand how you can even comment about something you admittedly know nothing about. Why?

> The new 6500 just blows away the Falcon..

I'm sure it does. But how much does it cost? For $300 used, you can have a Falcon and be working immediately with audio (and SCSI hard drive). For $400, you can add 8 balanced analog outputs at pro line level. For another $400, add eight inputs (balanced line level).

A used Power PC, say 7200 or something, costs, what, $1000 used? To add eight additional outputs, there are a couple of options. There's a new board from Emagic that costs around $600 that will give you eight outputs, but it's on RCA jacks, unbalanced, not at professional line level. You could buy a Korg 1212 (when it's released) for around $1000 and then buy their 8 output box for $500 that will get you eight balanced line level outputs, but that's still a lot more expensive. A used Pro Tools Project board and software setup will set you back about $1500 or so, but at least that also gives you eight inputs as well. An Audiomedia III card will give you 4 outputs, for around $500 (RCA unbalanced not pro level).

As I've said before, I'm sure at some point the PPC will be a less expensive solution for HD recording with multiple pro outputs. It isn't now, that's all there is to it!

> I am sure you are getting ripped at these prices.. And I know
> there are cheaper solutions..

You don't "KNOW." Otherwise you would have posted something concrete and proven me wrong. I invite you to ask everyone you know if there is

a cheaper solution.. hell, call recording studios, music stores, etc,
and ask them.

> Nice try to..The internet changes everything. Audio
> minipulation on
> the internet is here and the Falcon has not kept up. Even
> Falcon
> owners are pissed because they can't find decent internet
> tools..

That may be. I don't use the Falcon to access the internet, I have a
cheap 486 for that. The Falcon is just as suitable for creating raw
material for the internet as any other platform. Now, the Shockwave
encoder and other internet tools are not available on the Falcon, but
that has nothing to do with music and audio PRODUCTION.

> True.. People should buy what ever they think is best.. But
> the Falcon technology needs to be upgraded and the pricing should
> reflect the state of technology.

It does. That's why you can buy a Falcon for $300 used. That's what
the market has to say.

> The Falcon has been stereotyped as
> just a midi box. Imagine what would of happened if a million were
> sold.. Falcon users would of have not complained about the sorry state
> of internet and web tools..

Again, that's not what we're talking about. I am talking about, once
again, the Falcon's viability as a cost effective hard disk
recorder/MIDI/audio production solution. You have said absolutely
nothing to refute my points. You actually don't know enough about the
audio/music production market to do so anyway, so the point is moot.

> I know that Falcon users are dumping their midi systems for all
> Mac base one..

No, you read that ONE Falcon user is dumping his for a Mac. Actually, I
know a few others who have done the same thing. If you subscribe to the
Cubase Users Mailing List, you'll meet others who have dumped their
Falcon or ST for a Mac or PC. All have had problems of one type or
another that have impacted their productivity. Yes, they eventually get
them running, but most Mac users have complained about the delay from
audio input to audio output when using the stock audio inputs and
outputs, and the quality of the audio ins and outs. The delay doesn't
exist on the Falcon, because it's designed for audio. Apple has come
out and admitted that the audio market wasn't a significant enough
market for them to work with.. and it shows in their product. Their
stock inputs and outputs are worse then PC sound cards costing $100 and
up.

Creative people don't need to have the latest and greatest to create
great work. That's why many painters still use a paintbrush, many

writers still use a manual typewriter, and many songwriters just use an acoustic guitar.. and that's why I use a Falcon.

Today, there is no more cost effective, reliable, and better integrated audio/MIDI solution then Cubase Audio on the Falcon. Yes, there are BETTER solutions, but they cost much more.

Jammer (pwillis@hondo.cyberverse.com) wrote:
:
: I did a side by side comparison of CAB 2.0 and CAB 1.5

I haven't done this yet, but now that the official 2.0 demo is out, I probably will. It did _seem_ faster to me, at first glance, but I'll have to see if you aren't right. It is possible. After all, the program is keping track of even more in order to update the pointer, and things like that.

: Of course on the plus side there were many reasons why 2.0 is better such
: as the ability to open new windows, the frames ability, and of course the
: smaller side scroll bar and missing bottom scroll bar (unless needed).

Actually, the new "smaller" scroll bar made me angry because, on my Geneva based system which has all window elements on all windows trimmed down neatly, this scrollb ar is actually larger than the scroll bar in CAB 1.5 was for me. However, I suspect it was necessary in order to have the window actively update as you scroll. But it seems to me this is something that should be solved with WinX, Windows Commander, or similar, rather than at the program level.

: All in all I am sure those few problems above will vanish in time.

An, all-in-all I am so very happy to see CAB continue to grow and implement new technology as it comes along, that these niggles don't really bother me.

Hello everyone !,

Some fresh news from the front:

Let's begin with the good one ...

CAB 2.0 NEW ENGLISH DEMO VERSION
****
I just have downloaded the new demo version of CAB 2.0 at the Mille
Babic page ... It now works perfectly with pictures (loaded and
showed at the first time !) It becomes a great thing even if some
people find it too slow ...

WEB SPACE
****
No news from OXO and their Web space, french people on the fr.comp.sys.atari
say that it will not come out because OXO team is out of job ...

I can't believe it, but it seems it's true because I have sent some
e-mails to them and they don't answer anymore ...
Also I have read that it exists a new very fast web browser project
called HERMES ... ?!

And let's finish with the bad new ...

CNAM OUT OF ORDER
****
The CNAM (ftp & web) is out of work because some people (who ?) have
taken away (legally) the unix computer which made run the site ...
but where ?
The CNAM site will be moved to another place (they say they hope it
will ...) but where and when ? I hope they will take it as soon as
possible to make it survive !
Then don't try to connect to it now ... it even don't exist anymore.

Note: I have received a lot of compliments for my WoodTTower coming
from USA, UK, Belgium and Sweden ... Thanks to everyone considering
this piece of art as a good one :-)

I thought the clock buffer fix was the same as the SCSI fix.. in other words, the clock buffer mod fixed SCSI problems. Anyone??

> the machine freezes
> (although the bee-pointer will still move), and the hard drive busy
> light stays on.

I haven't had this problem, before or after the clock buffer fix.

> However, it only happens if I run under
> 256-or-higher color mode at high resolutions, which is exactly how the
> problem is described in the manual of my new copy of hddriver. The
> hdd worked perfectly before in a TT.

Well, if you run CAF, you won't run it in 26 color, you'll run it in 2 color mode, otherwise screen redraws are too slow.

> How many different hardware fixes are there anyway? I've heard of
> SCSI, clock timing, DSP, line-level input/output, and bass boost. Are
> some of these the same? (clock/DSP, etc...)

The bass boost/line level mods are usually done at the same time as one mod.

Sorry I can't help with more..

Brett Nair (dogmeat@fog.net) wrote:

: While NVDI and MAGIC are both wonderful and powerful programs, the
: one real drawback to full exploitation of their power is the
: woeful documentation of each.

Agreed...

: For instance, where does the MAKEPRN program store its changes?
: How come you can't change the name of the respective printer driver,
: even if its been copied? How does one use the changes? How come one
: has to completely reinstall NVDI if one wants to merely have an
: unfucked copy of the printer driver?

AFAIK, NVDI has two generic printer drivers: PAGEPRN.SYS and PINPRN.SYS. Since all page printers work pretty much the same, as do all dot matrix/bubble jet printers, this isn't unreasonable. I suspect that any "drivers" made in MAKEPRN are stored as different sets of codes in the generic drivers.

: Anybody make a driver for the Canon BJ-200ex?

There is a driver for the BJ10; I don't think the 200ex offers any extra features over the BJ10 (i.e., resolution is the same, page size is the same, etc.) so there isn't really any reason to make one.

Hi,

i've got a MegaSTE recently and have some problems now. When i connect a SM 124 to it (one of serveral i've got here at the moment) i get a number of vertical "division lines" on my desktop. These are easily visible on the grey desktop and hard to see on white areas like windows and stuff.

I have no idea what causes these stripes. Does anyone have an idea what i could or should do to get rid of these? I guess it's some elctrical problem...

Theoretically it isn't. Simply bypass the code that frees up the FAT
when a file is deleted and hook in more sophisticated file creation
code but it does depend on how modular these sections are. However,
that is a moot point because its in rom and undocumented. :-(

On the bright side, there is no such restriction in a ram based system
- it could be patched.

>>Here endeth the essay [and the cider] <G>

No can do I'm afraid - but someone with intimate knowledge (of MagiC
for instance) might be able to!!

409. FS: ATARI MegaST + Megafile30 + SM124

Newsgroup: comp.sys.atari.st
Date: 1997-04-07 00:00:00 UTC
From: Michael.Daehne@t-online.de
Message-ID: <5ibjs1$9l1$1@news01.btx.dtag.de>
Source record: 124419

Hello Atari user,

I got an ATARI MegaST2 plus an ATARI Harddisk Megafile30 plus
an ATARI SM124 b/w Monitor for sale.

If you are interested you can send an e-mail to:

Michael.Daehne@t-online.de

I would prefer, if someone in Germany would buy it because of
the customs.

410. New CAB2.0 Demo

Newsgroup: comp.sys.atari.st

I have been buying Atari computers and software from B & C ComputerVisions since the early 1980s. I just found out they are creating a web page for the store. It is on the web now, but not completed yet. Go see it at www.myatari.com.

This is a family owned business. B & C stands for Bruce and Cathy and they are very nice people. The are one of very few Atari stores left in the USA.

>Show your interest - pay for it!

I'd love to - show me where to buy TurboSynth for the Atari ST, which has been out of production at DigiDesign so long that their sales people don't even know they ever sold it (I contacted them and got a "what do you mean - we've never done that" from the droid).

So, give me an outlet for the old software that I need and I will pay for it, otherwise I need a copy so I guess I have to get it any way I can.

People should stop judging and start trying to make nice:-).

Have fun! - Bob

P.S. If anyone has TurboSynth for the Atari ST, I can either take it in trade for something I have or pay for it or receive a cracked copy since DigiDesign doesn't deem it worth while to sell to anyone an Atari version. Please! - RLH

I have an SLM 804 Laser printer for sale. It includes a mod to the controller that allows you to switch it on and off. It is in need of service right now, but I believe could be brought back up to good working order without too much difficulty. Make me an offer. I would prefer to sell it in Canada, as that is where I am located and would be the simplest. Anyone interested please reply by email to

carmant@nucleus.com

418. NOVA VDI & NEC M500

Newsgroup: comp.sys.atari.st
Date: 1997-04-07 00:00:00 UTC
From: dogmeat@fog.net
Message-ID: <5i9rb3$44h$1@news.wco.com>
Source record: 124464
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Dear Friends:

Having yes completed my installation of a used NOVA card, I still
have some questions, as the docs are all in german (please note
the lack of the sickening anti-deutch remarks I have seen in this
group...)

1. Is there an english version of the NOVA documentation? If so,
can anyone send me a copy?

2. Can anyone give me an idea of how to manipulate the NOVA
"Video Mode Generator?" or supply updated drivers for my
wonderful NEC M500 monitor? I am not using the video mode
generator becuase even my limited german indicates that
use of the Generator can damage the monitor(?)

3. Where there updated versions (I have version VME 8.17a) over
what I have (with updated drivers)?

As always, thanks and gratitude to those that respond!

419. NVDI "MAKEPRN"

Newsgroup: comp.sys.atari.st
Date: 1997-04-07 00:00:00 UTC
From: dogmeat@fog.net
Message-ID: <5i9rn6$44h$2@news.wco.com>
Source record: 124465
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

All:

While NVDI and MAGIC are both wonderful and powerful programs, the
one real drawback to full exploitation of their power is the
woeful documentation of each.

For instance, where does the MAKEPRN program store its changes?
How come you can't change the name of the respective printer driver,
even if its been copied? How does one use the changes? How come one
has to completely reinstall NVDI if one wants to merely have an
unfucked copy of the printer driver?

Anybody make a driver for the Canon BJ-200ex?

Actually, another "wish-thang" is that it should rename MAGXBOOT to a .PRX
extension, instead of a .PR- extension, when you choose to boot to TOS.
My boot manager manager would then be able to recognize it and I'd be able to
disable it there. Otherwise, a useful tool. Thanks!

Does anyone one know how to set the values for this MagX.inf value?

The MagX.inf file included on disk gives the value of "16", but
the documentation seems to suggest values of either "1" or "0" in
series (seperated by commas, spaces, nothing?)

Thanx to all...

> higher performance than SoftWindows.

As long as 680x0 code has to be run in emulation mode on the
PPC, there is little benifit for MagiC Mac users to purchase
a 300MHz PM. As far as I can tell, a 50MHz 040 executes 68000
code just as fast as ANY PM. Actually, I shouldn't say as far
as I can tell, it is a fact. Windows and other X86 code isn't
an issue here. Why not just purchase an inexpensive Pentium
200 to run the apps?

Another short blurb, unrelated, but I just read a VERY short
review of Light Wave 3D for the Mac in this months Mac World
(or Mac User, their about the same). I found it funny that the
premeier 3D animation/rendering application for the NT/W95/Amiga/
SGI market was only given about 1/8 of a page for a review.
The way the article was written, it lead me to believe the guy
finds it to much trouble to tie his shoes in the morning unless
he can do it by clicking from the desktop.
What I don't find funny is these are the same people "telling"
the public which PM clone is the best and how great the "next"
version of the Mac O/S will be.

What applications would these be? Define wonderful? With the
introduction
of Newsie, I have elimated all but Netscape from my internet needs on a
platform
other than my TOS machines. I haven't had much time for surfing lately,
but you
should really see CAB in action at 1024*768 24bit color on my Falcon
with my
new Nova card.

Funny, I just picked up a Falcon for $150.00. Works fine for me
and my bank account. And with the 040 installed, it will run just
as fast as the 300MHz Macs do for my needs, under TOS.

>Any reccomendation on ST links?

Check out the Quick FAQ posted in this newsgroup every friday.

If your ST is an STf, STfm or STe, you should have a small RF connector that you simply connect to your TV antenna connector.

If you have a scart/peritel connector on your TV then you might try to get a scart cable to connect to your monitor port.

If you have an old ST without the RF modulator, then you will need an external RGB to RF converter.

R > will pay for it,

Now you're talking!

R > People should stop judging and start trying to make nice:-).

I don't think you have been paying attention. The people who earn my
'judgmentalism' have wandered into this newsgroup demanding that we
provide them with programs, for free, that we paid for. Or to aid
and abet them in their quest. When we object to their calls to rip
off people, they assure us that the ST is worthless. And make other
excuses, including noise about how poor they are. Then they get
really nasty.

I'll make nice - when they learn better manners.

> Am I missing something here

Well I just happen to have my new NVDI 4 manual right in front of me
here,
and, yes, I think, may be... YES
page 18 has a screen shot of the printer dialog box and we can see
HP DeskJet 1200 Colour, HP DeskJet 500 Colour, HP DeskJet 550 Colour,
HP DeskJet 500, HP LaserJet 4L, and then the rest is hidden and I can't
see it. Damn! When _are_ we going to get holographic pictures in
these manuals!? As to SpeedoGDOS, I couldn't say whether or not it
has drivers for the HP DeskJet. I would think it likely though.
good luck.bonne chance

> I want to get these hdd problems worked out first)?

I didn't mean "26" color, I meant "256" color, as you probably figured
out. Anyway, yes, CAF will run in color, I've tried it, but it's
waaaaay too slow to actually use that way. The Audio waveforms are
drawn in red and something else is drawn in blue, and that's the extent
of CAF color anyway, so you're not missing anything.

As far as NVDI, with CAF, don't leave home without it! CAF looks better
and screen redraws are much better with NVDI.. in Steinberg's literature
for CAF, the screen shots are all done with NVDI.

Unless you have a plain ST (ie not FM, e etc) then you should have a standard PAL RF socket. If not then taking a RGB signal out of the monior port isn't hard and will be OK if you have a scart socket on your tv.

Is "surprisingly" BTW, thisn't a flame of any sort, i'm sure you've all seen how bad my typing is. As for Tony's question it might be a good idea to try ftp.demon.co.uk, I'm not sure if it's easy to get onto for outsiders but there is a diskmag section and it is fast although the Atari section is quite sparse.

> --.sig - cut here----------

The standard sig delimiter is "-- " (without quotes), if you put that in instead then most readers will cut it automatically, c'mon do us a favour :).

>> True.. People should buy what ever they think is best.. But the Falcon
>> technology needs to be upgraded and the pricing should reflect the state
>> of technology. The Falcon has been stereotyped as just a midi box.

Huh? I've _*NEVER*_ (can I emphasize it any more?) heard it referred to as
"just a midi box." I have some friends who work at a music store, and I
first told them I owned an Atari-compatible machine, and they weren't
too impressed, but when I told them that it was a Falcon, they couldn't
say enough about how good it's supposed to be and how it was made just
for the purpose of audio recording. They didn't even know it was an Atari
machine!

>> Imagine what would of happened if a million were sold.. Falcon users would
>> of have not complained about the sorry state of internet and web tools..
>
>The hardware is more than good enough, the software support is the
>problem.

Exactly, although if a million were sold there'd probably be better support.

>
>> I know that Falcon users are dumping their midi systems for all
>> Mac
>> base one..

I don't know a single one! I'm a Falcon user at home, and a Mac and PC
user at the music labs at school, and I personally would never trade my
Falcy in for either, as far as music apps are concerned. In fact, I don't
know many people who are going to Mac as much as PC, although that
wouldn't be my personal choice of the two.

>I don't think many would be that stupid.

Well, I for one am very satisifed with my Falcon's sound capabilities. I
considered buying a Mac to replace my old ST system last year, and when
faced with the costs of not only buying the new computer and extra audio
hardware, but also the enormous software library I had amassed over the
years, the Falcon was much less expensive for this purpose. It's quality
is superb, it's just as easy to use as a Mac, and having been a loyal
Atarian since the old 2600 game system came out, through the 8-bit era,
the ST era, I want to do all I can to keep the platform I've come to know
and love alive. My only complaints would be that instead of being able to
just run down to the corner computer store for software I have to wait a
few days for mail order, and it's not quite as fast CPU-wise as the
Mac/PC systems (although if these new faster TOS systems I hear about would
come down a little in price and be marketted the heck out of, I think

that would change that really quick). But it works very well for me, and until I absolutely have no choice, I don't want to ever be counted amongst those alleged defectors mentioned above!

Hmph. Never fails. I've seen this from time to time, usually someone who left their terminal on, was careless with their password, or someone was just doing some attempted break-ins to their account. But of course, if he did subscribe you to a few thousand email lists, then he'd be guilty of a denial of service attack, and subjected to legal recourse if he was caught. The headers usually have some good info in them. The Path:, Message-ID, and NNTP-Posting-Host: lines all have the info that will usually point to where it came from. Check mine. You will always see a line containing iglou.com, unless someone decided to forge me. It's happened once.

: Of course, I can put 2 and 2 together and get 5 or 6 pretty well,
: too :)

Ah, the old accounting joke. A guy interviews 3 people, and the last person asks him what he wants the result to be. I've taken two years worth of accounting, and I can see how it can be done.

Date: 1997-04-08 00:00:00 UTC
From: greeny@spirit.demon.co.uk
Message-ID: <860538312_OASIS_@spirit.demon.co.uk>
Source record: 124292

A recent Titan designs press release mentioned that they had found a
handy little utility to convert from FLI/FLC to Animated GIF.

AGATe (Anonymous Gif Animation Tool)

There was no mention of who had developed it.

Unfortunately they havent yet put it up on their page for download.

It's supposedly PD and supports transparent gif animations.
Seems like a must have for Apex users.

Has anyone seen this around anywhere?
FTP? HTTP?

TIA ....greeny

SUBJ: NVDI help, please...

h> I am posting this because I am a user of NVDI 4.10, who really knows
h> NOTHING about GDOS, and I used the GDOS install from NVDI to install it.
h> Now, it comes time that I have to change a font, and I have no idea how
h> to do it. I read through the manual(if you can call it that), and I
h> found nothing on changing fonts.

What font do you want to chnge, if its the system font then they have to
assigned to the relevant screen driver in the ASSIGN.SYS file, such as...

```
04p SCREEN.SYS ST-High
s myblue08.FNT myblue 8 pts Systemfont
s myblue09.FNT myblue 9 pts Systemfont
s myblue10.FNT myblue 10 pts Systemfont
s myblue20.FNT myblue 20 pts Systemfont
```

If you want to change the font that the output device uses then the Software
you are using should have an option for that if its a Speedo font that you
want to use.

If they are bitmap printer fonts then they have to be assigned to the printer
driver, and the matching display font to the screen driver screen such as for
example...

```
04P SCREEN.SYS
s MoNaco08.FNT
s MoNaco09.FNT
s MoNaco10.FNT
s MoNaco20.FNT
brw007it.vga
brw010it.vga
brw012it.vga

450. Re: UK magazines???

Newsgroup: comp.sys.atari.st
Date: 1997-04-08 00:00:00 UTC
From: hsideras@mettav.demon.co.REMOVE.TO.REPLY.uk
Message-ID: <562_hsideras@mettav.demon.co.REMOVE.TO.REPLY.uk>
Source record: 124324

Hi Tony, on 07 Apr 97 in my opinion you wrote: ...respect, brethren
> Hi Harry.....Its good to talk :)))

No-one's shut me up yet! (Except the missus %^{O)

>>> Although AC should have an opinion, It should surely be stated that
>>> the above is there opinion
>> Whose opinion would you like them to state? Of course it's their
>> opinion in much the same that you state yours.
> WRONG!...

In my opinion...

It's only wrong if you're pre-disposed to thinking that they're stating a fact rather than an opinion as part of a promotion of their magazine. What would you like them to say? 'We've signed a deal with one old and one crap disk magazine...' ? Lighten up...

> We and everyone else agree that AC should have an opinion, but like us
> mere mortals it should be expressed as an opinion

In my opinion... blah, blah, blah. Boring, isn't it.

> Come on Harry you know as well as I do that most people reading an
> official press release will presume that the contents have some sort of
> fact behind it rather than the opinion of whomever is writing it?

What a peculiar point of view...

No, that's absolutely not what I presume. I presume it's an opinion from their point of view which I can (and do) disagree with because my interests are different. I think one's very good and one's of little interest to me, despite what they say. I also know that your opinion of each one is almost opposite to mine.

>> AC have some standing and you also have a great deal in this matter as
>> you SIG attests. The opinions are different, that's all...
> Sorry Harry you don't seem to be able to see the difference between a
> Personal opinion, and an officail press release.

I see it very clearly, but their opinion doesn't change mine. I'm more drawn to your promotion of ST+ than their completely inexpert opinion of the subject (IMO of course and until I read it and discover the truth <g>).
>> I doubt it very much.
> And that of course is your opinion, or is that the OFFICIAL stance of
> the Association Of ATARI User groups... I would hazard a guess its the
> former........Begining to see my point now ?

It's a pragmatic opinion actually - making the assumption that people aren't so easily lead. My personal opinion (as many know) is that all disk mags are shite.

> Why can't you see that there is a world of difference between an
> Official press release, and a personal opinion?

When it boils down to it, a Press Release is a personal opinion with Press Release written at the start of it. If you think it's anymore than that you need to take your blinkers off. I don't see how you can promote the fact that you write the shells for many diskmags but only actively advertise one of them without also being (as you see it) guilty of elevating the status of ST+ above all others. Why isn't that doing the rest a dis-service? Or maybe that's because it isn't.

I've read too many magazines with too many opinions to think any different.
> You still love me though don't ya Harry...Don't cha! hehehehe :)))

Kissy, kissy B^{)

See you in Brum! Mine's a cider B^{)

Repost- AOL newsgroup readers - where did this post go?! ;^/
FreeAgent readers can still see it!!
Anyway I have to type it all over again(ugh!)..here goes!

Atari Software For-Sale List:

Atari CD Master/Audio CD Master 4, incl. drivers for following CD's:
Infopedia v2.0, Time Almanac 90's, Time Almanac 95, UFO I & II, Space
Missions, 1995 Auto Almanac, MPC Wizard v2.0...all for $30.

CD's for above FS: Infopedia v2.0.$20 Time Almanac 95.$10 Time
Almanac 90's.$10 UFO II.$10 Space Missions.$10 MPC Wizard v2.0.$10

ST FORMAT MAGAZINES (UK-ST) August '95 thru Sept. '96(final issue).
Each includes 'cover disk' & 'wonder disk' for each issue. 14 issues in
all, 28 floppies loaded with SofTware. all for $100

Productivity Software: Original disks/doc's/boxes included:

X-BOOT v3.10. $10 UltraScript-2disks by Atari for MEGA's. $5
PhotoShow STE v2.3. Includes Photokina Portfolio Player CD. $5
Data Diet v1.0. $10 Regent Word Processor. $5 EZ Test Writer. $5
PageStream 2.2 SE AND PageStream Assistant. $40
Hard Disk Sentry. $15 LottoDDS. $10 SPEEDO GDOS 5. $30
Winning Pictures Viewer. $5 MultiDesk-Unlimited Desk Acc.Power!. $5
NEODESK 3 v3.02 & 3.01/3.02/3.03 to 3.04 upgrade patch program AND NEODESK
Accessories Volume. all for $20
Mouse Boot v3.d SRL SYS. $5

GAMES: Make your own Bundle & Price(unless price is marked)

Moebius Warship LED Storm Read-A-Rama(2 disks) Eliminator
Last Duel Transputor Phantasm Karateka International Ice Hockey
Goldrunner II Pac-Land Zero Gravity Devon Aire Roadwar 2000
The Pawn Championship Wrestling Planet Of Lust(TOS 1.0 Only)

Message-ID: <5icpvk$dc4$1@nz12.rz.uni-karlsruhe.de>
Source record: 124330

Hello,
I need cyrillic screen fonts and a keyboard driver. I think that I can find
something about keyboard drivers and something about fonts in general, but
does anyboby know about any cyrillic fonts?
I thought it could be a good idea to try to convert the PC screen fonts (8x8
and 8x16) i have already...

Regards
Guentcho

I've been posting a FAQ for a few weeks, but it looks like it isn't
propagating correctly. I wonder if there's something wrong with my newsserver.
Please let me know if the "Quick FAQ - Draft 0.4" didn't show up at your site.

The floppy transfer question has been addressed in the FAQ, but I omitted file
transfer. I might add a section on that subject in the next draft.

My understanding of German is poor, but I remember reading something in
one of the CHIPS archives about curing a problem with vertical lines using
a capacitor
connected to the shifter chip in the computer.

Look for a file called CHIPS*.ZIP, should be in an archive near you.

Apologies if this is not the fix you need.

On Mon, 7 Apr 1997, Ken Macdonald wrote:

: Do you get the message "output device not receiving data" or
: something similar?

I *have* had this problem, but only when my currently non-working cdrom is attached (that's a different story--nothing seems to be able to see it when it's attached, and it sometimes locks things up. Termination, etc is set properly, and it works fine on a PC. Possibly a side effect of this SCSI problem?).

: Re: HD Driver, try using HDUtil.prg with the SCSI verify ON.
: When I tested for SCSI problems, I copied 4,000+ files and found 7
: errors using Tree_chk.prg (that came with Kobold). That was with
: SCSI Verify not selected in HDDriver.sys.
: With SCSI Verify ON in hddriver.sys, I had zero(0) errors.

Well, I'd never get that far. I've had the system freeze (and the drive busy light stay on) when copying as little as 10 files at a time. Using screenblaster (as the hddriver manual suggests it would) guarantees a problem.

I don't know if there are actually file errors, since I don't have hdd utils other than hddriver, and since I'm having a few problems with mint I can't use diff.

Wes.

On Mon, 7 Apr 1997, Mark Fassett wrote:

: I haven't had this problem, before or after the clock buffer fix.

Yes, and this is what's worrying me. I haven't heard of any kind of "freezing" problem. Could the SCSI fix have been done wrong, and is causing this? The fix was supposedly done by Atari itself...

: Well, if you run CAF, you won't run it in 26 color, you'll run it in 2
: color mode, otherwise screen redraws are too slow.

Heh, I had heard as such (can CAF even run in color modes?). I've got nvdi as well, does it help much with CAF (haven't installed it yet, as I want to get these hdd problems worked out first)?

Wes.

Pacifist is an ST emulator for the PC. It is very good and allows you to run
games and even demos under DOS.

It can be found at several places. This is the author's official site:

http://wwwperso.hol.fr/~gidouin/pacifist.html

>rather than at the program level.

I think Alexander implemented his own window-gadgets because it was
the only way to get frames to work. Yes, there are a couple of
drawbacks with this, after all he could have used the standard gadgets
and only used his own inside the window.

But all in all there are more advantages than drawbacks:
Realtime-scolling on all OS'es, vanishing vertical slider without
loosing the resize-gadget, and last but not least, simpler code.

I'm quite happy with CAB 2, except for some new "features". I
especially dislikes how CAB interprets colours in tables. Earlier
(With CAB 1.5), empty fields which had the background-colour
specified was shown with this colour. This could be used to create
coloured fields on the page. Now it behaves like NetScape and ignores
the colour in empty fields. MSIE 3 is now the only browser that
displays my homepage correctly :-(

I have heard that many technicians use this method, and I just can't believe it! This must be a sure-fire way to encourage the circuit boards and other parts such as the case to develop cracks at stress points, of which there are probably many since most electronic appliances are not intended to be subject to shocks.

Mine stands next to the plug sockets with an evil smirk and says
"Shut up".....So I do :)

> >>> Although AC should have an opinion, It should surely be stated that
> >>> the above is there opinion

Before we continue, this has been amicably resolved with the original
poster, it would seem there was another posting to this newsgroup, at
about the same time that would explain things?...<smile>

>would you like them to say? 'We've signed a deal with one old and one crap
>disk magazine...' ? Lighten up...

hehehehe amusing, but going from one extreme to the other there?,
"two top diskmags" is better than "the top two" and isnt as silly,

>In my opinion... blah, blah, blah. Boring, isn't it.

I would laugh at a press release that used those words... so show me
an exciting press release then ?

>despite what they say. I also know that your opinion of each one is almost
>opposite to mine.

and thats what makes the world go around, hope everyone realises
that?

Like I say..the press release buisness has been sorted.....

>to your promotion of ST+ than their completely inexpert opinion of the
>subject (IMO of course and until I read it and discover the truth <g>).

Go on whats wrong with me promoting ST+ ....Ding round 2 :))))

>so easily lead. My personal opinion (as many know) is that all disk mags are
>shite.

hehehe I am well aware that your opinions of diskmags are on a par
with my opinions of demos <puke!> hehehe

>need to take your blinkers off. I don't see how you can promote the fact
>that you write the shells for many diskmags but only actively advertise one

Then I shall explain and you will wish you had not asked....<grin>

I offered the same help to all the diskmagazines I deal with,
I offered the same help to some diskmagazines I dont deal with,

Initial feedback was good and last year I set up a diskmag web page for them all, only ST+ activly took an interest? so they have a web page and I am advertising it,

A good web page should be advertised, promoted, changed regularly and have something that makes people want to vist more than once, I have been asked to make a web page, and as with everything else, I give it 100%, I don't know any other way, do you? :) The "true" counter on the ST+ webpage of over 800 visitors in less than 3 weeks is surely proof that it works :)

BTW.....You aint seen nothing yet....there is nothing terrible happening here, its a good clean ATARI diskmagazine that has been around for well over a year, there is absoloutly nothing wrong in promoting it when asked to do so, It won't be everyones cup of tea and I openly admit to reading less than half of it myself, but I look forward to the parts I do read...

Maggie diskzine as mentioned in this debate also got the same offer, and after the one file sent to me about a year ago I have had nothing more, even to the point where in the last couple of weeks the editor of maggie has said on several occasions that he keeps forgetting to do something about it?

I can only help those that respond to my offers, and the only one so far is ST+

Want more Harry?,Think I am being biased do you?, well how about I offered as much help as possible to ATARI Computing re: destribution, I wrote with a perfectly good plan pre Issue One! note of my suggestions was made, but actions where not?

1) I suggested that they contact ALL the diskmags and advertise..they still have not, ST+ have .

2) I suggested regular free advertisements in micromart and pc mart..(The feed back I recieved from a recent ATARI article I had published in PC Mart would prove that a lot of ATARIans read it presumably looking for bargains?), they still havent advertised in either AFAIK..ST+ have on my suggestion,

3) I suggested adverts in all the atari pd libraries, they certainly havent done that either, ST+ have,

I offered more ideas and offered any help I could offer re: my other hobby STOS, offering answers to any letters they may get on the subject or any input they need regarding STOS...the offer was noted... again pre Issue 1, In fact I recall telling you I had offered the latter at the time?

AC may have perfectly good resons for not acting on my suggestions,
and I know that the person to talk to now Joe Conner wasn't even aware
I had offered STOS help (so not Joes fault), and they may very well be
plodding along quite nicely, in fact I recall them saying they where
victims of there own success so maybe don't want anymore exposure, BUT
that does not alter the fact that I tried does it!??????

I doubt I could be accused of bias, it is more a case of no one else
taking me up on the offers, ST+ did, and hopefully have gained from
it,

AAUG...I can only presume you don't want that advertising?, I
offered yourself the same web space etc, you do now have a web page
somewhere else, who knows where it is?,

>of them without also being (as you see it) guilty of elevating the status of
>ST+ above all others. Why isn't that doing the rest a dis-service? Or maybe
>that's because it isn't.

Read the above Harry, and please try not to presume I am so
underhand, I am doing no more for ST+ than I would for any page I am
the webmaster of, just that no one else wanted me to help? but you can
be assured I offered?

All you are "accusing"<smile> me of here is doing a good job of being
a web master, and that I take as a compliment thank you, had you in
your capacity as AAUG or any other Diskmagazine taken me up on my FREE
offers then they would be geting the same treatment...

> > You still love me though don't ya Harry...Don't cha! hehehehe :)))
>
>Kissy, kissy B^{)
>
>See you in Brum! Mine's a cider B^{)

Not at them prices....still havent found a pub as expensive... your
getting half and thats that!...<Smile>

....phew umpteen rewrites and a couple of hours later... I should
show you the first draft of this reply someday Harry hehehehehehehe

I know this bug but I can't find the mistake. Perhaps it is a bug in
MagiC because ShutDown for MagiC uses only system functions to switch
the resolution...

>I was surprised to see that AVSERVER doesn't implement the complete range
>either though.
You can't implement all AV functions in an external Server. But most
programs [all programs I tested ;-)] work fine together with
AV-Server. Which function do you miss?

You need GDOS (FSMGDOS, GDOS, SpeedoGDOS, NVDI,...)
You should be able to find FSMGDOS on the net, but I would recommend the
commercial SpeedoGDOS or NVDI. They can handle bitmap and vector fonts.
Most word processing/graphics packages should come with GDOS, if not,
NVDI or Speedo are well worth the money.
good luck.bonne chance

The 1 meg machines come with 4 256kb SIMMs... You can upgrade to 2 or 4 megs using 1 meg SIMMs (2 for 2 megs/4 for 4 megs) Speed rating should be from 80ns to 120ns... They should be the same type, parity, etc,... If you only go with 2 megs then they have to go into slots 2 and 4 (from the front of the machine/or slots 1 and 3 from the back) <smile>

PS Oh, yes these are 30 pin SIMMs... :)

This is in the Quick FAQ that is in this same newsgroup.

SIMMs are 30 pins, 120ns min speed, with or without parity, but not mixed.

Original capacity is 256Kb, with 4 SIMMs on 1040 and 2 SIMMs on 520STe.

You can either:
-upgrade a 520 to 1Mb with 2 more 256Kb SIMMs (same as the original)
-upgrade any STe to 2 or 4Mb with 2 or 4 1Mb SIMMs

Configurations that can handled by a standard, non-modified STe are therefore:
512Kb, 1Mb, 2Mb and 4Mb.

Mixing different SIMM types (parity/no-parity or a 2.5Mb setup) is not
recommended.

485. Does Geneva do Device Locking?

Newsgroup: comp.sys.atari.st
Date: 1997-04-08 00:00:00 UTC
From: Michael Clemmetsen <michael.clemmetsen@sunderland.ac.uk.spam-me-not>
Message-ID: <01bc4403$5c306f40$80dfe49d@m_clemmetsen_pc.sunderland.ac.uk>
Source record: 124359

Hi,

I just bought Kobold and have hooked it into NeoDesk4 which I'm using with
Geneva.
The Kobold docs say you have to put CHK_OPFL.PRG in your Auto folder unless
you are using an OS that supports device locking (MultiTOS and MiNT are
mentioned), i.e. they use the Dlock() function. Does Geneva provide this
functionality
or do I need to keep CHK_OPFL.PRG in the Auto folder?

Thanks,

Michael

488. FTP cnam.fr

Newsgroup: comp.sys.atari.st
Date: 1997-04-08 00:00:00 UTC
From: bales@garonne.stortek.NOSPAM.com
Message-ID: <E8BtLp.M82@gazette.stortek.com>
Source record: 124362

It looks like ftp.cnam.fr is down. Apparently, from what can be gathered in fr.comp.sys.atari, this is temporary and due to moving the machine, but it might be more complicated than this.

Anyway, there is a mirror up at:

ftp://ftp.utbm.fr/pub/atari/

It cannot be used for uploading though, but seems to be pretty up to date.

Seems to me the subject was 'lamers@*aol', or some such. There was some noise about mwe*ber being a 'hacked account', and some static about how we better not act like the Atari police or he would take vast action; subscribing us to 100,000 newsgroups IIRC. Pretty good trick in my case, as my host is limited to about 10 groups. The X-ref line in the header had some long hex number followed by my host's domain, same for Paul and Rich. I am not too handy with those headers, but I'm pretty good at extracting the basic investigative data (names, dates, places) from almost *any* language, including un*x :)

Of course, I can put 2 and 2 together and get 5 or 6 pretty well, too :)

It does seem strange, first not there, then 250 user limit, then 150
user limit, Now I can get into cnam.fr but the whole Atari folder is
empty?

>Anyway, there is a mirror up at:
>
> ftp://ftp.utbm.fr/pub/atari/

Ho wow great, all I have to do is change my web pages, many many
thanks for this information :), Is this a permanant mirror do you
know?

>It cannot be used for uploading though, but seems to be pretty up to date.

Yes, files I uploaded a week ago to cnam.fr are on this site now, so
it does seem up to date,

Thanks again, you have saved my day <smile>

>> 80ns will work, because that's what I've just swapped out of my current
>> machine and it appears that these have been used for quite some time.
>> However, I've been told that 70ns is preferred and Nybble-mode SIMMs
>> are advised so that Burst mode can be set.
a>
a> Thanks for the info on 80ns simms working. The reason I ask was
a> because someone was selling 4 - 4megs simms for $45. By the time I
a> found out 80ns would work, they were sold.

Four for $45? That's a good price!

a> I would love to get nibble-mode simms but they cost $50 each and I see
a> standard 4megs simms for sell on the net for between $10 and $15 all
a> the time.

My supplier can't find anyone who knows the difference between page mode and nibble mode, so I don't think I'm going to get them. I can't recognise a problem with what I've got atm either. I suspect it won't make much difference BICBW.

In any case, take a look at Jim DeClercq's recent message - that seemed the most complete answer I've seen and ties in with a lot of partial answers to the whole question I've picked up from elsewhere.

a>>> I know about not using 3 chip simms.
>> I don't. What about them?
a>
a> The 4megs simms come with either 3, 8, or 9 chips. The 8 chip simms
a> are non-parity and 9 chip simms are parity. The 3 chip simms emulate
a> parity and have timing problems. Most people have problems with them.

I see. I've found some text on this subject that would indicate that it's not *all* 3-chip SIMMs, but a fair few:

"If you require parity 30-pin or parity 72-pin SIMMs, make sure that you get what you are paying for. Unfortunately it is common practise these days to purchase BP, ECC or Logic parity SIMMs which are designed specifically to fool the computer's memory controller into thinking that the parity checks have been done when in fact they have not been performed. These logic parity SIMMs are much less expensive than real parity SIMMs and may cause data corruption by informing the memory controller that everything is OK even if it is not. To avoid any possible problems, make sure you are getting real parity."

Now, the question is: does TT-RAM require parity SIMMs at all? I didn't think it did...

Except for the part about resolutions, this sounds exactly like the problems caused by inferior scsi cables. Especially large numbers of small files to be transferred. Is this from an external drive to an internal?

Chris at CompDirect (or CompUSA) will sell you a cable that works well, but we are not talking cheap here.

>on the windowing system.
>Who could give me those?

Those three headers sound like like they come from the PureC compiler.
They mostly contain function prototypes - the data structures in them
will be of most importance.

aes.h will describe the Application Environment Services which is the
"front end" for Gem.

vdi.h describes the Virtual Device Interface (miscellaneous graphics
drivers - screen, printer etc). This is likely to cause the most
trouble from a documentation point of view.

tos.h describes the low level stuff (gemdos, bios, xbios) and you will
find much of it bears resemblence to some of the services provided by
older msdos versions.

The best source of documentation is probably the Compendium, available
in book form or CD.

I've probably owned a lot of consoles and home computers in the last 13 year. And I did own a 1040ST
and a MegaST2+Megafile44. I quit when the TT arrived. What I would like to know is what happened
afterwards? I don't remember if I had a STE or an earlier version. I don't know if the later models
had a total compatibility with the 1040ST.

The PacifiST is the emulator I use. In Dungeon Master It only gives sound when you see the flashing
FTL appear. Afterwards no sound at all. What happens? I use the latest TOS but still the screen will
become corrupt. Is there anything to need to alter? I used to have some maps but where are they now?

I also remember a Canadian diskmag like the dutch ST News but far better. Anyone know the name and
where the find it? It wasn't STosser!

Yours, Frank

I don't think you can do much with just souldering, you'll need a board
to plug the SIMMS into, something like the Marpet Xtra Ram Deluxe board
should do the trick, over here they cost about 35 quid and you shouldn't
need to do much souldering atall but you need your Video Chip and MMU to
be socketed IIRC. Try one of the big Atari dealers still out there, I
bet Brad Coda has a few thousand under his bed or something.

Hi,

A few days ago we (New Beat Development) released a new preview of our game Willie's Adventures.

This new preview features greatly improved graphics and music, animated enemies, parallax scrolling background graphics, level intro, Jaguar Joypad support, larger levels, eight channel sound, and much more.

Check it out! The original archive is named "WP970331.ZIP" and is available for download from our home page (http://www.kuai.se/~dhedberg). For those with no web access, it's also available on ftp.uni-kl.de.

Feel free to contact us with bug reports, suggestions, comments or any other reason. Thank you.

All the best,
Daniel

I've had a similar problem as well, I simply started printing the pages as IMG files with the driver included with NVDI 4 and printing those files. It works great that way.

Hello,

My Atari dedicated page is now fully translated and shows a lot of new
links like Centek, the CenTurbo falcon boards makers and even the
Phoenix clone project. There is also a new link to the only CD-ROM
based french magazine STraTOS. Three new Portfolio links have been
added ...
You will find these links and a lot more than the old version page at :

http://www.ping.be/~pin10575/ATARI-E.HTM

Enjoy it

Jo

d> documentation of each.

In English, yes. We need the 'Handbooks' that ASH sell for most of their
programs made available in English...

d> For instance, where does the MAKEPRN program store its changes?

In PAGEPRN.INF(SYS) and PINPRN.INF(SYS) in your GEMSYS folder.

d> How come you can't change the name of the respective printer driver,
d> even if its been copied?

You can, using 'Info'.

d> How does one use the changes?

Call up the Drivers CPX from XControl and select the new driver from thise
offered under PAGEPRN (or PINPRN).

d> How come one has to completely reinstall NVDI if one wants to merely
d> have an unfucked copy of the printer driver?

It could've been made easier, yes...

d> Anybody make a driver for the Canon BJ-200ex?

Pass...

I was told that I would need to get NVDI 4 to print pictures. So I bought NVDI 4 and now printing works fine. I think the price is reasonable for the upgrade from 3 to 4.

Matt.

AFAIK ConNect checks the OS, if you so much as used it on a different
computer the same thing would happen, even without MagiC, you have to
get a new registration number, you won't have to register again
though, I dont know how you do all this, i just know that changing OS
means changing registration, and MagiC is of course an OS,

I have been paying attention. I have a PPP account, so CAB is out.
That leaves pppkit, which I downloaded with the intention of trying to
get it to work. (BTW, CAB on line one should say STiK). But from
what I looked at (admittedly quickly since it's tax season and I have no
time), it required too much stuff to be put on the boot partition.
For reasons that probably aren't relavent, I have a very small C: partition,
it's like 1.5 megs and nearly full. If I'm mistaken, please correct me, as
after April 15th, I'd love to be able to try and get pppkit working with CAB.

Easier I agree, but faster? I admit a sample of one is hardly scientific,
but the one apple I tried (I think it was PPC 120mhz) was slower than
death. Just doing stuff on the desktop like opening windows was slower
than my Falcon with NVDI. Was it a shit machine, or is Apple OS really
that bloated and slow?

rhays@interaccess.com (Bob Hays, Computer Geek) wrote:

R > So how given how small and shrivelled the Atari ST market is
R > (and, in many ways, really always was

Actually, I believe that this is a little historically inaccurate. I am pretty new to the Atari scene (since about 1992), but I am surprised by how many major software houses developed for the ST. Of course, this is all ancient history :(, but MS, WordPerfect, TimeWorks, Mark of the Unicorn, and Generic CADD all did, as well as every game house and music house there is. And in this list, I mentioned *only* houses that I know still work on other major platforms. (Okay, Generic doesn't exist, as such, any more. They were sued/bought out by AutoDesk.)

But to answer your main point: there is still a used market, as somebody else pointed out. Is it honest to deprive the sellers of used software some recovery on their cost? And with the remaining users selling off their stuff, where is the problem? There are certainly more sellers than buyers. I would venture the opinion that anything that once was available, will be again - used.

Besides that, there are two ex-Atari dealers within a few miles of here (Boise, Idaho) that have tons of unsold software from prehistoric days. They still have old stuff - and I'll bet they are not alone. There wass also at least one dealer who recently sold his remaining stock to somebody in San Luis Obispo, California - and I know for a fact that he had tons of outdated software when he sold out. (B&C ComputerVisions tried to get his stock, or so they said.)

Did you notice the post selling TurboSynth? (What country code is .ch? Chile? And what are sfr? Can't be Swiss Francs, can it?)

Yes, you need Pacifist to get rid of that dusty and old ST. It's an ST
emulator for IBM computers. It rules! It's faster and has more memory
then the ST. Get it and then download all the "free" copyrighted
software that's out there for it. Anyone got some really cool old ST
disk images?

: Nobody is pushing you to buy MagiC. CAB will also work without MagiC.

I think Martin is referring to the STiK replacement that ASH apparently plan to offer. It was stated in this newsgroup that this new TCP/IP stack would only work with Magic.

I am a pretty die hard Geneva user, having carefully considered Magic at the time, so I share Martin's frustration. Thank you very much for making CAB more OS tolerant. As soon as one of the US Atari dealers starts to stock CAB 2.0, I suspect I will buy a copy and thereby upgrade from the copy of CAB 1.5 that I registered nearly two years ago. I will, perforce, continue to use STiK rather buy ASH's product, unless they offer a version that will work under Geneva.

Subject: Re: Internetroutinen fuer CAB

I have good new for MagiC and CAB user.

Volker Ritzhaupt from ASH wrote me, that soon a software will release
that will substitute STIK. This software works under MAGIC and is
called BLIP. BLIP will support PPP and is developed from ASH.

For those user, who ccan understand german here the original
correspondence with Volker from ASH. Above you can see his e-mail
address, where you can get more informations.

Greetings

Gerd

In a message dated 03.04.1997 14:08:14 Uhr, you wrote:

>oder vielleicht sogar STIK
>weiterentwickelt und mit CSLIP und PPP ausstattet?

Ich habe Dan Akerman mal ein MagiC geschickt und ihn animiert STiK daran
anzupassen und CSLIP und PPP ebenfalls zu implementieren. Leider hat das nur
teilweise geklappt.

>Ist so etwas in dieser Richtung geplant? Aus dem letzten Rundschreiben
>geht das nicht so eindeutig hervor.

Momentan versuchen wir eine Anbindung an Mac/TCP hinzukriegen. Das wuerde
dann zumindest fuer die MagiC-Mac-Benutzer einen Internet-Zugang via CAB
ermoeglichen. Weitere Bemuehungen in diese Richtung kann ich mir vorstellen,
es gibt aber momentan noch keine konkreten Projekte.

Volker

Cross-posted to: caltech.market,comp.sys.atari.st

I have a 1040ST with 2MB of RAM, a color monitor (SC1224?) a monochrome monitor (SM 124?), A Mac emulator cartridge with ROMs (The one David Small? made), a monitor switcher box, an (Adaptec?) SCSI host adapter (with a nice metal case that holds two 5.25" HH drives.) I also have some random software like Dungeon Master, Universe II (or III?), GFA Basic, etc. (Oh, and a mouse. There's probably other stuff. I haven't turned it on in three or four years.)

I'll give preference to:

1) People in the L.A. area.
2) Anybody who wants the whole shebang. I'd like to sell all of it at once.

Make me an offer.

Hello!

I have been trying to figure out how to use the multi-color icon .RSC files supplied with a lot of the software I have on my Falcon MK-X, so I tried downloading all of the icon programs I can find. Some of them can work with multi-colored icons for TOS 4.xx, which I thought would be great since the icons I currently use are all 2-color. But apparently, the DESKICON.RSC file that came with my computer can't be read by these (they said it wasn't a version 4 file), so in order to even function, they need a multi-color DESKICON.RSC file. And the icon programs that CAN load my file won't load in multi-color files. HELP!!!!! Where can I get a multi-color .RSC file?!?!?! I have TOS 4.04, which I know can use them, because I renamed an icon file from a software package to DESKICON.RSC, and it loaded, showed that all my icons were this new, beautiful icon, but then crashed. Does anyone have a file they can e-mail to me (if that's legal, of course)? Or does anyone know how I can create one of these or turn mine into the appropriate format? Thanks!

WN> So how can I tell if the fix has in fact been done? I've
WN> looked over the motherboard but can't see anything that looks
WN> like it was obviously tacked on later. Anything like a
WN> software util that will push the machine and will reveal if
WN> the SCSI is working properly or not?

Since you have problems when copying lots of files when you're in 256 or more colors, you probably need to do the clockpatch. If it's already been made, you will need another patch...
You can easily see if a patch has been made. If you look at the four PAL-chips on the PCB, close to the front of the computer, one of them should have a chip that's piggy-back soldered onto it. If you can't find such a modification, no clockpatch has been made.

WN> How many different hardware fixes are there anyway? I've
WN> heard of SCSI, clock timing, DSP, line-level input/output, and
WN> bass boost. Are some of these the same? (clock/DSP,
WN> etc...)

Clock/Timing/SCSI modification is one and the same and since it fixes the waveform shape of the CPU-clock, clock-patch is the correct name for it.
You can get line levels by exchanging a couple of surface-mounted capacitors and resistors on the PCB. The bass-boost can be removed by exchanging some other resistors and capacitors.
I'm not aware of any other modifications.

Best regards,

Claes

Which reminds me - the other day, without thinking, I stuffed a 1.44 disk into my drive B (a PC hd unit) to check it, forgetting that I am now using a TT without an ajax or TOS 3.06. The disk showed up in the window just fine! It seems to me that there was a difference of opinion about this - whether I could be taking a chance on damaging the Western Digital floppy controller, or not. It still seems to be working.

Another thing: there are prgs around that will check the drive speed of your disk drives - but the last time I tried one on this rig, it reported that it couldn't check the drive B, because it couldn't find the index pulse. Anybody know anything about this? It may be something as simple as a busted wire, because I made the connections out of whatever was in the junk box. Not really elegant work.

> of CAF color anyway, so you're not missing anything.

Hi, Try this: Boot in 2 colors with the accessory "control panel".
Now run Cubase, open the control panel and run, "COLORVDI.CPX". You will have
access to change (roughly) colors for the lines and background of the CAF
without ANY video slow down. One more thing, if you get tired of the
combination, just change it; i.e you can get several combinations. CAF also
works with Screenblaster (I am just staring at SVGA resolution :).

The Speed of CAF 2.06 running in 16 colors is the same as using
Cubase 2.01 for ST 1 MEG RAM/no NVDI. (Hey!, I'm just running the CAF in
256 color mode at 896*512... It's funny to see the mouse's cursor
changing colors while moving around the screen, but this is unbeareable.
Perhaps with a 080/120MHZ ;)

Keep dancing -F.

PS: Is anybody using an IOMEGA JAZZ with CAF? If so, How many audio
tracks?

hi, 2 months ago I made a full deskicon.rsc with its newdesk.inf. I
upload the archive on cnam.
These icons are colorful .;) and very nice.
just look for something like icons or myicons or something like into
the falcon/utils maybe.
the new address for cnam so far shoudl be:
ftp://ftp.utbm.fr/pub/atari/
(didn't try this address yet).
in a few I will recompile all the icons I have (a lot) and will upload
them as well.
yaiicks. mono icons on falcon? brrr ;)

>off people, they assure us that the ST is worthless. And make other
>excuses, including noise about how poor they are. Then they get
>really nasty.
>
>I'll make nice - when they learn better manners.

Well, I've paid for software for the ST that isn't available any more
from a producer - should others lack that software now because it just
isn't worth it to sell software for the ST? How many products are
useful but no longer available due to the tiny market for the ST? I
think something should be done about THIS situation, and instead of
worrying about manners we should try to discuss, rationally and
calmly, ways to make the computing environment for the ST better (for
those of us still using the beasts).

Have fun! - Bob

Hallvard Tangeraas <hallvart@sn.no> wrote:

<and he wrote other stuff>

: So what I'm looking for is a program that will do just that, but without
: the printer driver.

When I do any screen grabbing, I use XGrabber. This program does most mighty things - if I'm in a program (e.g. game, etc) that takes control of the entire screen or uses non-modal dialog boxes, XGrabber takes pics of them with no problem at all. It works for any screen though, not just weird resolutions.
Now for the requirements - you need an STe/Falcon and a Jaguar joypad (plugged into port A). The files created are .GFX and must be changed to another format (converters supplied).

Might this be a program for you Hallvard?

Leslie

: small files to be transferred. Is this from an external drive to an
: internal?
:
: Chris at CompDirect (or CompUSA) will sell you a cable that works
: well, but we are not talking cheap here.

Actually, this even happens when I'm making a copy of lots of files on the same (external SCSI) hdd.

I bought a new high quality SCSI cable (and boy! You weren't kidding when you said it wouldn't be cheap!), but unfortunately, the same problem.

Claes wrote:

: Since you have problems when copying lots of files when you're in 256 or
: more colors, you probably need to do the clockpatch. If it's already
: been made, you will need another patch... You can easily see if a patch
: has been made. If you look at the four PAL-chips on the PCB, close to
: the front of the computer, one of them should have a chip that's
: piggy-back soldered onto it. If you can't find such a modification, no
: clockpatch has been made.

I checked, and yes, the patch looks like it's been done. It doesn't appear that there are any shorts, either.

Here's new information: I turned off screenblaster completely and managed to copy, several times, 1000+ files at 640x480x256 without the screen freezing. Unfortunately I don't have a way to test if the files are correct, and it may be that there are still SCSI problems that aren't showing up since the machine isn't being pushed.

The screenblaster is probably old, it's not a screenblaster II or III. The control software is version 1.01. Is there newer software for it? Anyone heard of screenblaster causing this kind of problem?

I'm still having cdrom problems, too, which I'm not sure is related to this or not. I can't get HDDRIVER's IDCHECK.APP to show the cdrom's ID. It doesn't work with 2 different cdrom devices that were both used on Atari's before. Mint's cdromxx.xfs driver sort of works, as long as you go though u:.

On the other hand, Ken Macdonald said he had the clock patch done, but was still having problems... Are there machines out there that can't be

fixed?

Wes.

Hello,

I have such a program in my software package called eureka04.97.zip which is a 3D modeler and a 2D graph describer. It is simply called SCR_DMP.ACC. It's an accesory that dumps the screen when you press <ALT-HELP>. It produces files called DUM001.[IMG|PPM] and so on. It mean that you can choose between (X)IMG or PPM format. These two formats are readable with GEMVIEW. The IMG format won't work on graphic cards but if you have one you would better choose PPM format. The file is save on the root directory of any disks you have. The parameter are available in the accessory dialog. It is available on my homepage. Have fun with it ... Bye for now ...

Most unlikely you will damage the controller. These controller chips
WD1772 have been used in many systems for a good few years, (12+ years?)
all the outgoing signals are buffered on the atari motherboard, and
the 14 Pin connector has T filters on the incoming signals.

> Another thing: there are prgs around that will check the drive speed

>
Bad software, as NO INDEX PULSE == all disks unreadable, the
controller will not know where the first sector on the floppy disk is
located. the controller is also unable to format the floppy disk, again
for the same reason. Pin 4 on the 14 pin connector is the index signal.
If you have an oscilloscope you will see the index pulse signal, some
of the newer digital multimeters have a frequency counter which you
may also use to check the index pulse frequency.

This is in the Quick FAQ that is posted here every week.

This is possible. Check out Ghostlink which allows an ST to use a PC's
hard disks/cd-roms. However, some people have reported having problems
with getting it to work.

There might be some other file transfer programs on the main FTP servers.
have a quick look at them.

Alas, when I reached this mirror this morning, all I got was the
following message:

Desole pour les atari-maniaques, le site ftp n'est plus
disponible. Nous etions miroir du site du cnam, et malheureusement
notre configuration a accepter trop volontier sa disparition :
notre site a aussi disparu.

Nous devrions bientot beneficier d'un nouveau disque et une
personne de chez nous acceptera peut-etre de s'occuper du site.

Si vous avez un mirror recent du site du cnam (ou du notre) en bande
ou autre, signalez vous a responsable.reseau@utbm.fr.

Esperez...

According to my rusty French skills, this states that their mirror has
also disappeared and that they would appreciate hearing from anyone who
does have a recent mirror of cnam, as they would still like to be able to
offer it.

Hi Atariphiles

Does amyone know of a list of compatible programs for use with Mag!X 4 and 5, along with necessary patch programs and configuration options.

Also any advise or FAQ's relating to Mag!X would be very useful.

My question was initiated by concerns when running several HiSoft programs, which I eventually discovered needed a XMEN_MGR.PRG patch to be run as a parallel app before they would run. Similarly the batcher supplied with Lattice C refuses to smoothly run.

Many thanks in advance

Don

I've linked a 4 Mbyte STFM to a Pentium with Ghostlink (a serial port transfer program).

It works well, but it's slow (19200 baud), you need a null cable, details with the file.

I can now have the PC floppy (1.44 meg) & hard drive (1GB) on the desktop.I can copy files to/from the PC, but you can't run programs from the PC.

Check out atari.archive for a copy.

>My boot manager manager would then be able to recognize it and I'd be able to
>disable it there. Otherwise, a useful tool. Thanks!
You can use DoMagiC to switch back to MagiC after you finished your
work with TOS. I don't use the PRX extention because a lot of users
have both programs MAGXBOOT.PRX and MAGBXO32.PRG in the AUTO folder.
If I rename MAGXBO32.PRG to PRX and you use DoMagiC to switch back to
MagiC, it can't recognice which program (MAGXBOOT.PRX or MAGXBO32.PRX)
was used. Therefore I use PR- for the disabled MagiC booter.

>>Glad it's got an English version.
>Seems English programmers are getting scarce in the Atari world!
;-))

>Hmm. What's Bubble02 ? and again what's this AVSERVER stuff???
BubbleGEM (BUBBLE02) is a tool to display a bubble help (a small box
with text). If you install it and click a button with the right mouse
key (e.g. in ShutDown for MagiC 1.5), a little bubble with a help text
appears. BubbleGEM is also used by Start Me Up (SMU) and - I hope -
will be used by a lot of programs in the future ;-)

The author of BubbleGEM and SMU is Thomas Much. You can download it at
http://www.uni-karlsruhe.de/~Thomas.Much/

AV-Server: MagXDesk does not support the AV protocol (MagiC 4.x) or
not all needed functions (MagiC 5.x). AV-Server is an external AV
server that enables the missing functions if you use MagXDesk. If you
install AV-Server you can drag&drop files from MagXDesk e.g. to
ST-Guide or you can delete files found with ParaFin by dragging them
to the trash can of MagXDesk.

CAB can't use the standard scroll bars because of the frames: GEM can
manage only one horizontal and one vertical scroll bar per window. But
if you display a document with frames you need sometimes more.

>because of MicrShit's monopolistic marketing tactics, its the only game
>in town . (for a lot of stuff)

Yes Basically the reason I got one...It just seemd strange to see
what I thought was want? in the same paragraph as you where calling
the software, thats all I asked for,

>>get a cheap pc and dont sell your atari, because you will regret it, i
>>mean that in a nice way, i know lots of people who went that way, and

>I would never sell my Atari, or even give it away. The PC would be an addition
>, not a replacement (if I did end up getting one)

Again exactly what happened here, but you did have "so long Atari" in
your original subject line, so you can see where the missunderstanding
arose can't you :)...and you where asking for thoughts on the subject
and those where/are mine :)

Cheers !ynoT (ATARI Programmer)

country code .ch is Switzerland, coming from "Confederatio Helveticae" (a
Latin expression, because in the ancient times the Swiss were called
"Helvetier" or "Helveter" or something like this, so it's the Swiss
Confederacy.

"sfr" is, as far as I know, the official abbreviation for Swiss francs.

Have a nice day

Hallo Alex,

Glad to see you respond to c.s.a.s posts. MagiC? I'm not a user. However,
I've been a long user of CAB and I'm you should get some satisfaction
knowing that many Atarians are Surf'in the Net because of CAB :)

As the programmer of CAB you may be interested in this:

NewlineCharacters CAB v2.0a sends a LF instead of CR-LF
HTTP Referer, CAB doesn't support as most browsers do.
HTTP Accept-Encoding, CAB.OVL doesn't recognize? (I know this isn't yours)

This may be old news to you, but does cause problems at some common web sites.
Some examples are:

http://www.qvc.com/
http://slate.com/
http://www.switchboard.com/
http://www.pcquote.com/

I tested CAB and the results are at:
http://www.research.digital.com/nsl/formtest/stats-by-browser/index.html

All in all, vielen dank. Auf Weidersehen.

Charles

P.S. I'm glad you can now Surf the Net and waste time like millions of us!

Hi,
I've got the demo version of Tree Saver which allows you to print to
pages of text on one page in two columns in condensed print mode. The
only problem is the demo version only allows you to print up to 4 pages &
I'd like to use it on much larger files. I'd love to get ahold of the
full version. Any help any one could give me would be appreciated -- I've
got some $ and would also be open to a disk swap or something...
Thanks for reading,

But the FAQ must be easy to find. As I asked the same question a few months ago, I've had searched before, but i had no idea where to search. IMHO I found some FAQ later as links on a web page. I don't know why, but I didn't find them in news.answers, maybe it was just temporarily. And the answer helped me a lot, cause it was the only way to transfer Internet articles and software at that time.

Hello to All!

I'd like to start off by saying "Thank You" for all the support everyone gave me when cancer hit my family again. Your calls, cards, and notes were GREATLY appreciated and meant alot to everyone here. I can't begin to express my Thank You to everyone.

Things have settled down in my life right now and I'm looking around to see what my next project/job will be. One of the options I've been considering is..... re-opening the Computer Dungeon. Why, you might ask.. because I still use (and always will) Atari products, In the short time I've been reading messages here I firmly believe there is still a market and demand for Atari products, and I loved running the Dungeon and talk'in Atari with all my customers.

But its been 6 months or more since I've done anything Atari, so I'm somewhat at a loss on what the current state of Atari is. From messages here I'm getting hints that: Toad is getting out of (or at least cutting back on)the Atari platform, ST Informer is gone, and Current Notes ??? I have no idea what vendors/retailers are still around, what programs have been released recently or are about to be released, etc. etc. etc.

What I need is some help: I would appreciate Email from everyone giving me your thoughts on the current state of the world of Atari and would re-opening the Dungeon be of any service to anyone. Please include in your Email what systems you use/own and what kind of services products that you would like to see. Please address all Email to:
ComDungeon@aol.com

I have put up a Web Site similar to what this post is saying. You can check out the Dungeon Web Site at:
http://www.mcs.net/~isis/dungeon/dungeon.htm

Again, Thanks to everyone for the support you gave the Dungeon over the years and the support you showed myself and my family in our time of need.

I look forward to hearing from everyone.

Al Horton
The Computer Dungeon
ComDungeon@aol.com

P.S. If you prefer to leave a voice message to me about the Dungeon re-opening, you can call (708) 547-7085

574. XBoot, COPS, Freedom2 & ZControl was:Re: BigDos and dos partition

er

So
I guess the limitation is in my head! :^)
Perhaps the limitation is in XBoot.
For example I just received my upgrade to NVDI4, and placed COPS in my =

ACCS folder. XBoot can't see it. I can't select or deselect it.
I have to go to XBoots file manager to see it, and change its extension.
Weird.
COPS can see all my CPX's (when WDIALOG decides not to bomb) at least,
unlike the Freedom2 demo.
When I try to run Freedom2 at boot it always bombs. I can manage to load =

it from Chameleon, but although Freedom2 works then, it is the only
program that does. I can not select or start anything else, and have to =

reboot. Does Liberty have to be located at a special position in the =

Auto folder? I haven't been able to find it. Freedom2 always bombs even =

if the only thing I have running is Liberty at boot up.
Of all of them, ZControl works the best.
I am somewhat disappointed with WDIALOG and by extension NVDI and Magic.
In order to use the font viewer, I have to use WDIALOG, which means I =

might as use COPS, which means there is no point in using Freedom2 even
though I like the idea of Freedom2 much better, and no point in using =

ZControl even though it is the one that works better for me.

Right now I have three program fighting for placement at the end of
my Auto folder: BlowBoot, Outside, and wdialog. Does anyone have a =

similar setup, and one that works well?
later.plus tard

575. Quick FAQ - Draft 0.5

Newsgroup: comp.sys.atari.st
Date: 1997-04-10 00:00:00 UTC
From: bales@garonne.stortek.com
Message-ID: <860688215.11752@dejanews.com>
Source record: 124217

latest version of the Quick FAQ: Draft 0.5 - getting closer every day to version 1.0 !

I'm posting it today because I'll be on holiday this friday.

It's really getting larger than what I originally intended, but hey, if somebody out there finds it helpful then I guess it's ok!

It's probably still full of crap, or missing some important things, so fire away: any critics, comments, suggestions, thermonuclear missiles, etc... are absolutely welcome.

Nick

THE ATARI ST QUICK FAQ

Draft v0.5 - April 10th 1997
Nicholas Bales - bales@garonne.stortek.com

In order to save bandwidth and avoid comp.sys.atari.st newcomers asking the same questions over and over again, here is a quick list of the most Frequently Asked Questions (FAQ) and, hopefully, useful answers. The aim of this FAQ is not to answer all of your questions, but only to indicate pointers to the most common ones.

Please note that this FAQ is aimed at newcomers and is mostly ST oriented, but I hope it will also be of use to more experienced users.

I am only the compiler of this FAQ. I have built it up from many c.s.a.s threads, older FAQs and other internet based information. I am not really such an Atari specialist myself, and have no personal experience of many of the topics that are dealt with in this FAQ.

Therefore, if you have more specific questions, please direct them to the newsgroup instead of me. Any comments regarding the FAQ itself however (corrections, additions, comments, total contradictions) are absolutely welcome. I'll be quite happy to add omissions and correct errors.

Topics that are not covered in this FAQ might be in the older FAQs:

ftp://ftp.sn.no/user/hallvart/atari/info/n_faq1.txt
ftp://ftp.sn.no/user/hallvart/atari/info/n_faq2.txt
ftp://ftp.sn.no/user/hallvart/atari/info/n_faq3.txt

Credits are listed at the end of this file.

CONTENTS:

1. Starting up on the Atari ST

* 1.1 What kind of machine is an Atari ST ?
1.2 What kind of monitor can I use ?
1.2.1 Connecting to a TV Set
* 1.2.2 Atari Monitors
1.2.3 VGA,SVGA or multiscan monitors
1.2.4 Falcon Monitors

1.3 Where can I get a boot disk for my ST ?
1.3.1 Booting without a disk
* 1.3.2 Atari Language disks

1.4 Can I run Atari ST software on my PC/Mac/Unix box ?
1.5 Where can I get the TOS ROM images ?

2. Software

2.1 Where can I get WareZ for my ST ?
2.2 What are the main FTP sites ?
2.3 Is there a DOOM clone for the Atari ?

3. Hardware Upgrades

3.1 How can I upgrade memory in my Atari ?
3.1.1 Expanding SIMM equipped models
3.1.2 Expanding DRAM equipped models
3.1.3 Those Falcon boards
3.2 What kind of hard disk can I connect to my ST ?
* 3.2.1 ACSI Hard drives (Atari Megafile and SH series).
* 3.2.2 SCSI hard drives
* 3.2.3 IDE hard drives
3.2.4 ZIPs, CDROMs, Syquest drives and non-SCSI
* 3.2.5 Hard disk driver software
* 3.3 I want to replace my floppy drive. What should I do ?
3.4 How can I upgrade the operating system ?

4. Connectivity

4.1 How can I transfer files between a PC and an ST ?
4.1.1 Exchanging TOS and MS-DOS disks
4.1.2 Exchanging TOS and Macintosh disks
4.1.3 Serial port file transfer
* 4.1.4 File conversion
4.2 How can I hook up my ST to the Internet ?
4.3 Where are the good Atari Web Pages ?

---

1. Starting up on the Atari ST

1.1 What kind of machine is an Atari ST ?

The Atari ST range is a 16/32 bit Motorola 68000 based personal
computer range started in the mid 80's. Here are some generic specs.
Some models differ from these specs, so check the list below

Processor
Motorola 68000 (68030 on TT and Falcon) processor at 8Mhz (16 on MegaSTe
and Falcon, 32 on TT030)

Screen Resolutions:

ST/STe/STfm/Mega ST/Mega STe:
512 colour palette (4096 on STe, MegaSTe, TT)
ST High: 640x400/Monochrome on dedicated monitor,
ST Medium: 640x200/4 colours on colour monitor or TV,
ST Low: 320x200/16 colours on colour monitor or TV,
TT:
ST resolutions (above)
TT Low: 320x480/256
TT Medium: 640x480/16 (plain VGA)
TT High: 1280x260/2 on an ECL monitor.
Falcon:
ST resolutions (above)
many other resolutions like 640x480/256 or 16 bit truecolor
(65,536 out of 262,144). 640x400 interlaced is the maximum
on ST colour monitors.

*Ports:
Cartridge, Midi In, Midi out, Parallel, Serial, Monitor, Disk Drive,
ACSI (proprietary hard drive, except Falcon), TV antenna (if RF equipped),
RCA/CINCH stereo (from STe on), Joystick/Mouse, Analogue joystick (STe),
SCSI (Falcon/TT), LAN (MSTe, Falcon, TT).

Models:

Name Speed RAM R TOS Floppy MBESVKTC Comment
---
130 ST 8 128Kb D 1.0 Ext. Never marketed
260 ST 8 256Kb D 1.0 Ext. Very few made
520 ST 8 512Kb D 1.0 Ext. disk TOS on early models
1040 ST 8 1Mb D 1.0 Ext. disk TOS on early models
520 STf 8 512Kb D 1.0 360Kb
1040 STf 8 1Mb D 1.0 720Kb
520 STfm 8 512Kb D 1.0 360Kb M TOS1.4 and 720 drive later
1040 STfm 8 1Mb D 1.0 720Kb M TOS1.4 available later
MegaST 1 8 1Mb D 1.2 720Kb B S KT Pizza box
MegaST 2 8 2Mb D 1.2 720Kb B S KT Pizza box
MegaST 4 8 4Mb D 1.2 720Kb B S KT Pizza box
STacy 8 2/4Mb D 1.4 720Kb B Portable ST
STBook 8 1-4Mb D 2.06 720Kb B Notebook, Very few made
520 STe 8 512Kb S 1.62 720Kb MBE
1040 STe 8 1Mb S 1.62 720Kb MBE

Mega STe 16 1-4Mb S 2.06 1.44Mb MBE VKTC TT style case.
TT030 32/030 2-138MbS 3.06 1.44Mb E VKTC Various mem/HD configs
Falcon 6/030 2-14Mb P 4.04 1.44Mb BE TC Many enhancements (below)

R=RAM type (D:DRAM/S:SIMM/P:Proprietary memory board)

M=RF Modulator
B=Blitter chip
E=Enhanced 8bit DMA stereo sound, 4096 colour palette, hardware scrolling,
analog joystick ports
S=MegaBus processor direct bus slots
V=6U VME bus slot
K=Detached keyboard design
T=Internal time/date clock
C=68882 Math co-processor

In addition to all this the Falcon030 also has many enhancements the other
models don't have. To name just a few : DSP (56001) subsystem, 16-bit
graphics system, 8-channel 16-bit sound system, 16-bit expansion port.

1.2 What kind of monitor can I use ?

1.2.1 Connecting to a TV Set

STfm and later models were equipped with an RF Modulator allowing them
to be connected to a TV's antenna connector. Check section 1.1 to see if
your ST has a modulator. You then need to tune into the correct channel
on the TV to get the ST picture.

In some countries, Atari shipped machines with a SCART/Peritel cable that
plugs into the monitor port instead of the RF Modulator. In this case you
need the adequate cable and a SCART/Peritel equipped TV set. No tuning
is required, and the picture is higher quality than through aerial.

A TV will only display in low or medium resolution modes.

* 1.2.2 Atari Monitors

Monochrome (640x400 colours) requires special Atari high resolution
70Hz monitors (SM models). These monitors have a very stable paper white
display. SM monitors can only display monochrome mode. TTs and Falcons
can do without the SM monitor and display ST high on a VGA monitor.

ST Medium (640x200/4 colours) and ST Low (320x200/16 colours) need a
colour monitor (SC series) or a TV.

If you want to display all ST screen resolutions with an ST/STe/STf/STfm
you need both types of monitors. Unless you use a multisync.

These monitors cannot be connected to a TT. You'll need VGA for a TT.

1.2.3 VGA, SVGA or multisync monitors

First of all, you need a monitor that supports the following refresh
rates :
ST High ST Low/Medium

Vertical refresh rate 70 Hz 50 or 60 Hz
Horizontal refresh rate 31.5 Khz 15.75 Khz

A FAQ on the use of multisync monitors with the ST can be found here:

ftp://ftp.teleport.com/users/atari/multsync.faq

1.2.4 Falcon Monitors

The Falcon is equally happy with a VGA/SVGA/etc. monitor or an old ST/STe
type monitor (though resolution will be limited to 640x200 on these).
When you buy a Falcon you _must_ also simultaneously buy a "video cube"
for it, that connects to the Falcon's proprietary 19 pin connector. There
are two cubes that were sold by Atari, one for the ST type monitors, one
for the VGA type monitors. Which you get is completely up to you. Shortly
after the release of the Falcon, third party developers also released
"cubes" that could be used with both types of monitors. The cube is an
uncomplicated adapter and costs between US$10 and US$15.

A text file about Multisync/VGA/ST-res adaptors for Falcon is here:

ftp://nic.funet.fi/pub/atari/falcon/doc/falcadap.zip

1.3 Where can I get a boot disk for my ST ?

1.3.1 Booting without a disk

First of all, Atari models with TOS in ROM don't need a boot disk. If you
do not have a correctly formatted double density disk to boot from, just
wait a few minutes for the GEM desktop to come up on it's own, then
format a clear double density disk using the menu option.

If the desktop screen doesn't come up after more than 5 minutes, either
your ST is broken or you have an old ST (neither f or fm or e) without
TOS in ROM.

* 1.3.2 Atari Language disks

Depending on the ST version you have, a language disk was supplied with
some basic software, mainly:

CONTROL.ACC Control panel desk accessory. Later replaced by XCONTROL
XCONTROL.ACC A modular control panel accessory. Uses CPX files.
ST Basic An old and very buggy Basic interpreter.
ST Logo An old and quite useless Logo interpreter.

Very few of the programs supplied on these disks were of much use. If it
was lost, it is no big deal. Better quality public domain or shareware
replacement programs can be found on most FTP servers (see section 2.2).

Software supplied with the Falcon included :
MultiTOS Multitasking environment
Atari Works Atari integrated software package
SpeedoGDOS GDOS extension
These are commercial programs and are not available on the Internet.

1.4 Can I run Atari ST software on my PC/Mac/Unix box ?

You need a program which fools your computer into running Atari ST programs. This is called an emulator. There are plenty of them available on the Internet.

Here are some good net resources for Atari emulator software:

http://www.nfinity.com/~swhalen/node99/st.html
http://www.emulators.com/
http://www.complang.tuwien.ac.at/nino/stemu.html
http://wwwperso.hol.fr/~gidouin/pacifist.html
http://www.aixit.com/

1.5 Where can I get those TOS ROM images ?

TOS is the ST's operating system. It was supplied on ROM chips with most STs. Some emulators need an image of these ROMs in order to run.

However, TOS is copyrighted software and the distribution rights belong to Atari. Neither Atari nor JTS (the company who now owns Atari) has stated that any version of TOS can be freely distributed and used. Distributing it without a licence is therefore software piracy, which is illegal and enforced everywhere in the world.

Solliciting pirated software is also illegal.

Owners of a real ST can use a program called TOSDUMP.PRG to make a TOS image for their own use. This is considered legal as long as the image is not distributed and you own a legal copy of the program (ie: the ROMs).

Illegal copies of TOS images *can* be found on the net. Please note that using one is illegal, and asking for them in the newsgroups is against the charter and will cost you lots of flames and trouble.

---

2. Software

2.1 Where can I get WareZ for the Atari ?

Software piracy is an illegal activity. Participating and promoting it is considered an offense on most newsgroups, and comp.sys.atari.st readers are strongly opposed to it.

If you still wish to ask for pirated software, do so at your own risk,
but be aware that you will receive flames, complaints to your domain
administrator resulting in losing your internet access, general discredit
and maybe even more trouble.

See also section 1.5 on TOS ROMs.

2.2 Where can I get freeware or shareware on the Net ?

There is lots of freeware and shareware available for the Atari ST on
FTP archive sites. Most applications are available as such.

Complete lists of FTP sites can be found here:

ftp://ftp.sn.no/user/hallvart/atari/info/ftplist.txt
http://www.umich.edu/~archive/atari/Info/atari-ftp.sites
http://web.cnam.fr/ftp/pub/Atari/Docs/atari-ftp.sites

Web interfaces to 3 of the most active atari FTP archives:

http://www.cnam.fr/Comp/Atari/Index.html
http://micros.hensa.ac.uk/micros/atari/tos/atari-tos.html
http://www.umich.edu/~archive/atari/

FTP mirror to uni.paderborn and umich archives

ftp://sunsite.doc.ic.ac.uk/pub/computing/systems/atari

Do not forget that shareware (and sometimes freeware) means that you
have to register the software if you use it regularly. Please do so as
this is an encouragement for programmers to continue developing for the
Atari platform.

2.3 Is there a DOOM clone for Atari ?

SubStation from UDS is a Wolfenstein 3D clone for the STE, without
texture-mapping, but with a similar look and feel. UDS has a web site:

http://www.uds.se/complete.htm

Bad MOOD is a joint internet project to build a 3D Doom engine for the
Falcon. More information can be found here:

http://rand.thn.htu.se/cgi-bin/buildpage?bad_mood

---

3. Hardware Upgrades
==========

3.1 How can I upgrade memory on my Atari ?

3.1.1 Expanding SIMM equipped models

If your ST is equipped with SIMM memory, you can easily upgrade your memory to 1, 2 or 4Mb by just taking out the old SIMMs and popping in the new ones.

The correct memory type is 30 pin SIMMs, with or without parity, 256Kb or 1Mb. The minimum speed of 256Kb SIMMs is 150ns and 120ns for 1Mb SIMMs. It is best not to mix different SIMM types. They must be implemented by pair in slots 1 and 3, then 2 and 4 (from back to front).

Atari STEs are originally equipped with either 2 (520STE) or 4 (1040STE) 256Kb SIMMs that can be replaced by 2 or 4 x 1Mb SIMMs.

Because of a bug in TOS, STEs will not recognize a 2.5Mb configuration (2x256Kb + 2x1Mb) without a small AUTO folder program called silkboot 2e. This can be found on most FTP sites (see section 2.2)

3.1.2 Expanding DRAM equipped models

On DRAM memory models, the memory chips are soldered directly to the computer's motherboard. This make expansion more tricky. Each chip has to be soldered correctly, and the motherboard must have enough room for the expansion. A 520ST/STF can be expanded to 1Mb, a Mega ST can be expanded to 4Mb.

A way around this is to use a special memory expansion board that replaces the original memory banks with standard SIMM sockets. There are many such solutions available like the Marpet Xtra Ram board. Look for Atari related companies on the Atari web pages (section 4.3).

3.1.3 Those Falcon boards

The step forward from DRAM to SIMMs on the STE series became a step back to a proprietary memory board system on the Falcon. The falcon was pre-equipped with 3 memory board models: 1, 4 or 14Mb. Upgrading a Falcon means scrapping the original memory and replacing it with either a new proprietary memory board or a third party SIMM board. There are many of these available and can sometimes be combined with a CPU accelerator board (see section 4.3)

3.2 How can I connect a hard disk drive to my ST ?
---

* 3.2.1 ACSI Hard drives (Atari Megafile and SH series).

ACSI is Atari's proprietary hard drive connector. It is similar to SCSI which was standardized later, but not directly compatible. Drives that were compatible were the Atari Megafile and SH series that ranged from 20 to 60Mb capacities. Supra, and maybe some other manufacturers also made some ACSI drives at one point, but these are quite rare.

These are the only hard drives that are directly compatible with the Atari ACSI port on original STs.

* 3.2.2 SCSI hard drives

In order to use these, and unless you have an internal Atari host adapter (Mega ST, Mega STe) you need a SCSI host adapter that connects the SCSI drive to the ACSI hard drive port on the Atari. There are several models available depending on whether or not you need parity (no parity only for Mega STe), whether or not they are for external or internal drives. The 2 most common SCSI host adapters are ICD's The Link II and the Link'96 from Norbert Wieczorek. They can be found at:

http://www.icdinc.com/
http://members.aol.com/NorWiecz/index_e.html

Don't forget also that there is not much room for a 3.5 hard drive inside an original ST case. You will need either to put the whole system into a PC type tower case, or to find an external housing and power supply for your hard drive.

* 3.2.3 IDE hard drives

There seems to be currently no way to connect an IDE drive to an ST, although some people are working on the problem. Until this is done, you need to go the SCSI way. See section 3.2.2

The Falcon has an internal IDE slot for internal 2.8" IDE drives. Some Falcon users have managed to fit a replacement 3.5" drive internally.

3.2.4 ZIPs, CDROMs, Syquest drives, anything else non-SCSI

These have to be SCSI models and use a host adapter described in 3.2.2. Parallel port peripherals cannot be used an any ST because Parallel port communication was not fully implemented by Atari.

Be aware also that CD ROMS and ZIP drives need parity enabled, so you must have a parity enabled SCSI adapter.

MLM or any other non-SCSI drives will need a SCSI adapter, that you will then connect to the SCSI/ACSI adapter (section 3.2.1) connected to the ST.

A FAQ on using CD ROMS with Atari computers can be found here:

http://www.mcc.ac.uk/~dlms/CD_FAQ

* 3.2.5 Hard disk driver software

In order to get TOS to recognize the drive. AHDI is Atari's Hard Disk Driver an can be obtained free from any good FTP server (see section 3.2). However, it appears that it is not as capable and efficient as 3rd party driver software such as ICD Tools or HD Driver.

It seems that some drivers are not compatible with some drives while they sometimes give better performance on others.

(Input needed)

*3.3 I want to replace my floppy drive. What should I do ?

Any 3.5" PC 1.44Mb floppy can be used as a double density 720Kb Atari ST drive as these are now very hard to find. Jumpers will need to be set to 'drive 0' for it to be recognized as A: (it will be set to drive 1 for a PC). Some most recent drives reportedly cannot be changed easily to 'drive 0' so you have to make sure before buying it. A 1.44Mb drive may also have trouble reading older STs 360Kb single sided floppies.

Physical mounting may also present problems, but they are not insurmountable.

In order to use a 1.44Mb drive in high density mode on an ST, you will need to accomplish a few hardware modifications. Take a look at:

ftp://ftp.sn.no/user/hallvart/atari/info/sony_144.zip

MegaSTEs, Falcons and TTs can accept 1.44Mb floppy drives as standard.

3.4 How can I upgrade the operating system ?

The ST's operating system, TOS, is on ROM chips on most STs. Only the very early ones had TOS 1.0 on disk.

TOS 1.2 (1.02) and 1.4 (1.04) came on 6 chips. All later versions came on 2 chips. TOS 2.06 is the latest version that can be used in an ST(e/f/fm). TOS 3.xx is for TTs and TOS 4.xx is for Falcons. These two are highly hardware dependent and cannot be used on other machines.

Upgrading TOS from a 2 chip version to a newer 2 chip one is quite simple, provided you set correctly a couple of jumpers.

For upgrading old 6 chip TOS machines to TOS 2.06, look here:

ftp://home.mtholyoke.edu/users/kellis/atari/tos206up.txt

Otherwise there are many TOS upgrade boards available as well as Bi-TOS boards allowing you to switch from your older TOS to 2.06 with an extra switch. This is to avoid compatibility problems with older programs.

---

4. Connectivity
==========

4.1 How can I transfer files between an ST and another computer ?

4.1.1 Exchanging TOS and MS-DOS disks

The TOS disk format is DOS compatible. This means that any 720Kb double sided double density disk from a PC can be read on an ST and vice versa.

There are several limits however:

-Older TOS versions (before 1.4) do not format disks exactly the same way as MS-DOS, so for these models, you might try formatting the disk on a PC.

-Some old 520ST, STF and STFM models use 360Kb single sided drives which are not compatible with most newer 1.44Mb PC models. You must either get a double sided drive for the ST or find a PC that is able to read the old single sided disks.

-Windows 95 uses long filenames and seems to sometimes corrupt TOS disks, so be sure to use the 8+3 standard DOS/TOS format.

4.1.2 Exchanging TOS and Macintosh disks

TOS is not compatible with macintosh disk format. However modern Macs are supplied with a system extension that allows reading and writing MS-DOS disks which are compatible with TOS (See section 3.1.1).

4.1.3 Serial port file transfer

Another way of exchanging files between ST and PC is to use the serial port with a null modem cable. Ghostlink will do this and can be found at your favourite FTP site (see section 2.2).

* 4.1.4 File conversion

Just because a file has been transferred does not make it readable by the software. Here are some file types that come up often.

Midifiles: Atari and PC Midifiles are the same whatever the machine. There are type 0 and type 1 midifiles though, so you need to be able to read both.

Text: The shareware word processor Marcel can read 1stWord, 1stWord Plus, WordPerfect, WordWriter and STWriter files and export to RTF. TWP28 can translate between WordPlus ThatsWrite and WordPerfect.

Pictures: You can use Gemview to convert just about any graphic format to GIF or JPG formats. Paint Shop Pro on the PC can read IMG files.

Sound: FiveToFive (525) can convert many sample formats.

All these programs are shareware and can be found on your favorite ST archive (section 2.2). If you no longer have an ST to run these conversion programs, you might try using an ST emulator (section 1.4).

4.2 How can I hook up my ST to the Internet ?

The ST can be used to send and receive email, read usenet newsgroups, download from FTP archives, and even to surf the web.

There is a whole lot of internet resources on the subject:

The Atari Internet guide
http://zippy.spods.dcs.kcl.ac.uk/~garfield/aig/aig.htm

The Atari Connection
http://www.cedep.com/~gstamant/atari/atanet_e.htm

The good old Atari ST FAQ

576. Looking for That's Write latest version

Newsgroup: comp.sys.atari.st
Date: 1997-04-10 00:00:00 UTC
From: Yves Debillo&#65533;z <yde@ficsgrp.com>
Message-ID: <334D1244.4550@ficsgrp.com>
Source record: 124218

I am currently using That's Write 3.0d. Is there a possibility to
upgrade it?

Is there any supplier who can send me a new version?

Thanks,
Yves Debillo&#65533;z
BELGIUM

In the last issue of the German "ST-INSIDE", there was a description of how to upgrade any ST to four meg simply using a 4 MB PS/2 Simm and some cable. Maybe someone could send you a scan and some instructions, I haven't got the time right now.

Source record: 124221

Hi everyone....

If anyone is interested, I have now added a guestbook to the Croft Soft on the 'Net pages of Croft Soft Internet Publications.

I'd appreciate it if, when you next visit these pages, you'd take the time to fill this in as it helps to give me an idea of what people are looking for in a web page. I will also add your main comment to the feedback page so others can see what you think.

Point your browser at the address in my sig.

Secondly, I'm looking for people who would be willing to contribute articles to the Atari Times HTML disk magazine I run. I'm interested in any types of articles - reviews, previews, features, news or an ongoing series. For example, I recently added an ongoing series of articles by Joseph Hogan on Le Redacteur - if anyone feels they can contribute similar things I'm all ears!

The Atari Times web page, and the on-line version of the latest issue can be found at the address in my sig.

Damn! Another perfectly good fight spoiled...

> "two top diskmags" is better than "the top two" and isnt as silly

Sure, but surely you're not getting so worked up on the basis of bad grammar?! That hardly calls for the suggestion that Disk mags are being done a disservice...

FWIW I supply the latest AC press release with the UKAAUG disk I send out. I had to make several changes to the wording before I'd do so.

> Go on whats wrong with me promoting ST+ ....Ding round 2 :))))

It seems you missed the irony in those comments I made (revealed in the last sentence). Otherwise you'd realise that I was actually arguing that promoting ST+ was completely legitimate.

> Want more Harry?

No, that was quite enough <g>

> 1) I suggested that they contact ALL the diskmags and advertise.. they
> still have not, ST+ have.
>
> 2) I suggested regular free advertisements in micromart and pc mart..
> (The feed back I recieved from a recent ATARI article I had published in

> for bargains?), they still havent advertised in either AFAIK.. ST+ have
> on my suggestion,
>
> 3) I suggested adverts in all the atari pd libraries, they certainly
> havent done that either, ST+ have.

These are all very good suggestions.

> AAUG...I can only presume you don't want that advertising? I offered
> yourself the same web space etc.

Indeed, and the fact is that I *don't* want the advertising. I can't cope with the work that I've got and any more would swamp me altogether. If it ever transpires that I get the time I'll probably want to do something under my own steam, which is the main reason for turning down all offers. I have

the software to do it now, but time's a major problem...

FYI I had offers (in various ways) from System Solutions, Titan, WAG, STAG, FaST Club and others I can't remember now. If you're feeling put out by being turned down by me you can just join the queue (somewhere towards the front, admittedly).

> you do now have a web page somewhere else, who knows where it is?

For about six months (I think). Let me check...

http://ourworld.compuserve.com/homepages/magicka/sid_c.htm

It's full of original unchecked info, but if you want to take a look you can. Any page I set up would have to be a lot better prepared than that.

The page belongs to Bob Paton of STAG IIRC (I think it's moving soon) and I think you'll find some info of mine on Carl Hender's page too. I haven't checked either page since before Christmas...

>> of them without also being (as you see it) guilty of elevating the
>> status of ST+ above all others. Why isn't that doing the rest a dis-
>> service? Or maybe that's because it isn't.

That was the sentence I was on about earlier. It was irony!

> All you are "accusing"<smile> me of here is doing a good job of being a
> web master, and that I take as a compliment thank you, had you in your
> capacity as AAUG or any other Diskmagazine taken me up on my FREE offers

TC> and stuff.

Could you be more specific as to what pat of the screen they occupy. This
could be a simple striation, a problem with the monitor, or even a problem
with the Mega itself.

Are you able to test either piece of equipment on another matching partner.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

There is a program (called PARCP in its compressed form) that uses a
variant on a parallel cable(you change the parallel cable yourself)
to connect the parallel port of the ST to the parallel port of the IBM.
I haven't tested it myself as I have not yet made the change to one of
my parallel cable. software included.
look for parcp
good luck.bonne chance

Many FAQs have not been approved by the .answers team, and you
shouldn't find a comp.* faq in news.answers, but in comp.answers
I think. I maintain the FAQ for comp.sys.sinclair but the hassle
to get it approved by the answers team outweighs the advantages;
newbies rarely read the answers groups anyway.

>
Perhaps. I do this with my ZIP drive but the SyQuest may behave
differently, try it. Format it on the Mac to DOS spec. This is assuming
that you have PC Exchange on your Mac. You will need PC exchange (or
equivalent) to read the disk.

Then use an XHDI compliant hard disk driver on your Atari along with MagiC
5 or BigDOS if you do not have MagiC 5. (I would strongly recommend getting
MagiC 5). An example of an excellent XHDI compliant driver would be HD
Driver.

Now you can read and write to the SyQuest on both machines, as well as
share it with a PC.

All the best,
Chris @ Computer Direct

John, I have made a lot of web pages on the atari with Pinguin Web
Page Maker and editing them with Everest and I also have used a lot of
<IMG SRC....... width="?" height="?"......> commands and it always works
perfectly with CAB 2.0 so did 1.5 also ...
And about what you were mentionning : the little boxes appear well
during the graphics drawing ...
On which system do you work ? With NVDI ? Under which desk ?
For me I use a ET4000 Crazy Dots Card with my TT and under NVDI 4 R3
ET4000 associated with Neodesk/Geneva ...

>continue to use STiK rather buy ASH's product, unless they offer a version
>that will work under Geneva.

I'm using Geneva (and Neodesk) each time I boot my TT, so when going
on the Net with CAB (1.5 or 2.0 demo) I'm always using Geneva and it
works perfectly ... Martin is also using GlueSTik with his
configuration ... I did the same ... the only difference between us
is that Martin is not always using Geneva he prefers to use NAES which is a
very good multitasking program ... perhaps the best for compatibility
.. when Martin uses his own NAES/MintNet/GlueSTik configuration I
have to say it's more performing than mine ... he now have succeeded
to use ftp links inside CAB rather than using AFTP ... at the moment I
cannot do that with my Geneva/MintNet/GlueSTik configuration .... the
only thing Martin cannot yet do is to send e-mail inside CAB ... I
suppose you've understood for me it's the same !
NAES seems to be one of the best multitasking systems ...

> that bloated and slow?

My recent experience with Mac (Performa 6400, PPC 166MHz) was similar. A
few things, I liked, but it was S_L_O_W! And it locked up 1-5 times daily,
and don't even think about using a floppy disk; it'll drive you nuts. I
blame it on the OS (5Megs, after I trimmed it!)

I too am a long-time Atari fanatic, strongly considering moving toward
PC/Windows (as an ADDITION, not a REPLACEMENT for my several ST's). The
reason(s); Web access, VGA resolution. Nearly everything else is superior
on the ST. My top-of-the-line unit is a MegaSTe. For MIDI, I use anything
from a 520STfm to a 4Meg 1040STe.

Hello all,

I am writing because I want to solve my long time problem of having the wrong time on my system.

You see, here's what I have:

Mega STe
ADSCI + hard drive card(built in clock)

I am just trying to find a way to have my clock on the right time. When I set one of them(I can never tell which one it is), it always reverts back to the old time.

My question is: could I turn off the 'set time' option from the ADSCI+ card to the internal clock. Then, some how, set the internal clock of the Mega STE?? If I can change the internal clock, can I ask how??

Thanks for you help.

Joseph Hogan

Hi, Hallvard
I've got such a program.
It only operates in monochrome mode.
<ALT><HELP> creates an IMG-file.
<SHIFT><ALT><HELP> outputs screen to the printer. HP deskjet 500 ONLY.
-Would it be of any use?

AUCTION START TIME..: 08:00:00PM EST # MY HOME AND EMAIL ADDRESS IS: ##
AUCTION END DATE....: 04/28/97 LeftyLe5@delphi.com/Larry Lefebvre
AUCTION END TIME....: 08:00:00PM EST 94 Bailey Ave/Lewiston, ME 04240
#############################################################################
IMPORTANT: I am having problems posting the entire Auction, so I am only
giving you the hi-lites of it. There is lots more good stuff
besides what is in the hi-lites. There are a total of over
350+ games from various classic and not so classic systems.
This auction may have already been sent to you if I have had
prior dealings with you, but if you are someone who didn't
receive it, let me know if your interested and I'll send you
the latest update. DON'T MISS THIS ONE!!! ***MANY RARES***
#############################################################################
#
Welcome to Lefty's Sixth (6th) MONSTER Auction(See NOTE BEL). This Auction
contains many classic items, and some not so classic ones. I have divided
this Auction into sections to make it easier for you to quickly go to the
section that you might be interested in. Any notes shown in these sections
apply to that section only. Below, you will find a quick reference to each
of the sections, including some hi-lites. These will be followed by the
Minimum Bid Increases (placed up front for easier reference), the Special
Announcements area, the sections listing the games, and finally the rules
which are at the end of this Auction. Enjoy!
#
NOTE: If you wish to be on my mailing list for this auction and possibly
others, just drop me an email request. Updates will be sent out
6-times a week (Mon thru Sat) around the 8:00PM EST to 12-Midnight
timeframe, to all those who bid or request to be on my mailing list.
Placing a bid in one of my Auctions automatically places you on my
mailing list, and you will receive updates for that Auction.
#############################################################################
#
Quick Reference Guide to the Game Sections:
==========================================
```

6A- NINTENDO Carts (Loose unless noted - 130+ Games - Many **RARES**).
Bible Adv's, Darkwing Duck, D&D: Pool of Radiance, KLAX,
Li-Nemo Dream Master, Treasure Master, Venice Beach Volleyball
---
6B- ATARI 800XL/XE & ATARI ST INFOCOM Games(15+ Games -Boxed/Complete).
Bard's Tale, Powermonger, Shadowgate, Ultima I,II,III, Univited,

C > and get pppkit working with CAB.

Unless I'm terribly mistaken, ICD and all modern hard disk drivers
allow you to choose (at bootup time) which partition to boot from.
Install the booter to drive D, or whatever, and use that to boot
MiNT. Probably lots of paths to change, since you won't be using the
defaults, and lots of hair pulling to make it work. So what's
different about that? :)

the MegaSTe clock should be set by the Xcontrol.
then use ICD get time, and then set time.
I think :^)
I'll check tonight

I've got a clone witha 200mhz 603e and it's plently fast enough for me,
the windoes flip straight open and there is no real wait, it does update
the window as it fetches the data from disk but that's just the disk
spped really. A 120mhz should have a fair enough display speed but I
don't think you've find a PC or Mac that'll display a windows as fast as
a Falcon & NVDI but the speeds is perfectly acceptable for me. The only
reason that my mac is a bit slow at opening the windows is because it's
got a damn IDE drive.

b>
b> I know this bug but I can't find the mistake. Perhaps it is a bug in
b> MagiC because ShutDown for MagiC uses only system functions to switch
b> the resolution...

Of course it may be a bug in in NVDI's version of CHGRES, which is incapable
of terminating or ignoring some TSRs that were perfectly successful with the
standard CHGRES version supplied with MagxDesk.

>> I was surprised to see that AVSERVER doesn't implement the complete
>> range either though.
b> You can't implement all AV functions in an external Server.

I see - I didn't know that.

b> But most programs [all programs I tested ;-)] work fine together with
b> AV-Server.

Yes, no problems here that I can see. I switched off the FONTSELECT option
because I prefer the features of FONTSEL to that of MagxDesk, but it gives me
no problems.

b> Which function do you miss?

I don't know - I was hoping some features would 'appear' B^{)

Strike me dead if I'm wrong but I don't see Atari consoles using
disk images :) And there's no similarity at all between the 8
and 16 bit Ataris so why one program for them all?

I've figured out the MSA format for my own MSA -> ST (and soon
ST -> MSA) converter, mail me if you still need it. The layout
of an ST disk is not exactly rocket science but shout if you
still need that too.

Source record: 124126

At one point you mention that the Falcon can do a maximum of 640x400 interlaced on an ST monitor or TV, elsewhere you say the maximum is 640x200. Technically, both are correct, but consistency seems to demand that one or the other be used. I suggest using "640x400 interlaced" throughout.

This is similar to using Sebra, as Sebra allows all ST's and STe's to do 640x400 interlaced on a standard ST monitor or TV.

One small typing error, in the long chart of hardware specs, you have the Falcon using a 6 MHz 030 processor rather than the 16 MHz processor it actually has (you accidently dropped the "1" it looks like).

Really good work though. It is nice to see an up-to-date FAQ again, and this one is nicely slimmer than the old one. I agree with you in keeping the length short. Maybe break some of the more arcane stuff out into special FAQ's that have URL's referred to from the main FAQ, just as GDOS has its FAQ, etc... Right now it isn't too long though, I don't think.

From: !ynoT
Message-ID: <334ec4b3.31501223@news.airtime.co.uk>
Source record: 124128

This Question does have a reason for being.....

Old Magazine coverdisks,

Whats the situation for copying them? Is it Illegal? I suppose it is
in a sense, BUT as the whole idea behind getting your software onto a
cover disk is to get it spread far and wide then ?

EXAMPLE: STOS BASIC was given away on a cover disk, as was the
compiler, would it be BAD to make a copy of the actual cover disk?
Is copying coverdisks as frowned upon by ATARIans as copying orginal
software,

I am NOT doing the above, but thought it may be a possible loophole?
and decided there was no harm in asking,

SO ???Anyone any thought on the subject?

Cheers !ynoT (ATARI Programmer)

There are several prgs that do this besides Tree Saver. Manualizer
by Anthony Watson and Pamflite come to mind. Pamflite was written
for and works great with the HP Deskjet 500, and is my favorite. If
you do not have a DJ, try out Manualizer. I can't think of the
others, but there are several, most of them based on Tree Saver.
(Wasn't one called Double-something - and another 2page, or
something like that? Wish I had as much memory above my neck as I do
at my fingertips :)

Of course, you can do this in PageStream very handily (if you happen
to be handy with PGS :)

I've tried CAB.OVL v1.18 and it seems better. The <transaction failed>
message is gone now but I'm still getting that <read error file ">
message.
Anyone an idea why?
TIA
Martin

They come with 2 (520) or 4 (1040) 256k 30 pin SIMMs. They can take up
to four 1M, 30 pin, SIMMs 60-120 Mhz, either 8 or 9 bvit should work
equally well.

Open the case and check for empty DRAM sockets. If your machine has
these sockets installed you only have to plug in 16 1-Meg DRAMs. Some
of these machines had pads or holes for these sockets. In this case you
will have to resort to soldering sockets to the board. All MEGA STs can
address 4 megs of DRAM.

Well...there are versions of Ms.Pac-Man and Donkey Kong (Mrs.Munchie
and Kid Kong), but they really aren't that good :(

There's pratically a dump load of classic remakes on FTP sites and
such...let me know which games you're interested in and I'll see if I
know of any(and if they actually are any good toplay, most important)

Nah, the authors of individual packages are the copyright owners
unless specifically stated otherwise; the magazines simply
distributed the packages and have no copyright claim.

A passing comet dropped this from hallvart@sn.no to All...

Hi Hallvard!

h> I received MagiC 4 today, and much to my amazement "Connect" (comms
h> program) didn't work with it!!!
h>
h> That is... it worked just fine, but the "demo version" thingy came up
h> with the 30 hour limit, and *I have* registered my copy!

The key that you are given is based on your OS as well as your name etc, so generate a new reg. letter from the 'Register' box and send it off. Then you can add the new key to the list of those/that one already present. That also means that if you upgrade your copy of MagiC then you will have to generate a new key request.

Speak to 'ya later!

Infact PacifiST is A LOT better that a real ST, It has everything the ST
had plus You get a 2000 Mb Hard drive, A 8 speed CD-Rom, 14 Megs of
memory, a faster that 16mhz CPU, Ability to switch beetween all 5 Tos
versions, Colour and Monochrome on the same monitor. and it runs most
Programs perfectly.

Thanks for commenting Rory. I thought for a minute that my post didn't get
out - the silence was deafening...

RS> I see what you mean Harry but about the German Atari side - is this
RS> thriving and is Atari still supporting the ST and its other system in
RS> its German Atari branch of the company?

No - Atari Germany ceased to exist a few years ago AIUI. Their top guy was
brought over to the US and left the company a short time later IIRC. Now it's
just down to the major commercial outlets like ASH and the Independents.

RS> Also if there is quite alot of software over in Germany for the Atari
RS> I think I should pay it a visit some time and purchase some and bring
RS> it back.

Take a look on the Web and link to various sites from Jon Nott's Fujizone.
You'll see what's generally available from there...

The registration process takes account of the TOS of the machine you
registered it on. You need to get an updated registration key whenever you
upgrade the OS. There's no charge for this AIUI.

628. REQ: Exact Specification for ST Floppies (720k)

Newsgroup: comp.sys.atari.st
Date: 1997-04-11 00:00:00 UTC
From: Will Fisher <_blackat@direct.ca_>
Message-ID: <01bc4645$9ee00320$baf7aecc@127.0.0.1>
Source record: 124250

All,

I am writing a program called DIMS'97... it will be a total
Disk Image Manager and Shell for all Atari Emulators, including
AtariST, Atari8bit, and Atari Consoles.

If someone could forward the EXACT Specifications for the
Atari Disk structure so disk images may be directly manipulated
and created from DIMS'97 I would appriciate it.

I am also looking for the EXACT Specification for the
Magic Shadow Archive (MSA) file format.

If you can help me then please reply here or prefeably send
e-mail to blackat@direct.ca

If you can help me at all and I use your information you will
get a mention in the about box and a copy of the 'gold' version
when it is released (�eta Testers also get a Gold Edition which
will have a few extra features not in the free version)

TIA,
Will Fisher
BKproductions

I use 0.41 on my 486DX4-120 (running OS/2). However, the speed
is mostly around 60% (in monochrome mode).

Can anyone give me some reference on performance? Is 60% reasonable,
or is it just too slow (I sometimes have the feeling my hardware
is not timed very accurately...) ?

Regards,

Rene Kint

Edit your MAGX.INF file to include lines such as:

#_ENV HOME=C:\AUTO\APPS\
#_ENV AVSERVER=THING
#_ENV PATHS=C:\GUIDES\
#_ENV FONTSELECT=C:\AUTO\FONTSEL.PRG
#_ENV TEMP=C:\CLIPBRD\
#_ENV EVEREST=I:\POINT\
#_ENV HYPFOLD=C:\GUIDES\
#_ENV KOBOLD_PATH=E:\KOBOLD_2.5\KOBOLD_2.PRG
#_ENV STFAX=H:\STFAX\

h> - I use "LEDpanel" in my AUTO folder, to show the time and CAPS
h> indication in the menu-bar, but somehow the time is shown in the 12
h> hour format regardless of having set it to 24 hour format in the
h> Xcontrol panel.

Start using ZControl in your Auto/Apps folder (path set with the #_HOME
variable above) and put Menuinfo in there as well. Both are far better and
happier with Magic IMO. Menuinfo is a far neater utility than LEDPanel.

h> - I've been using "Automouse.prg" (from the "Mousekamania II" (mkm_ii)
h> program which lets you define your own mouse-pointers

Can't help with that...

I think the tos.h comes from TurboC/PureC and is therefore copyrighted.
Try to find any other libc (MiNTLib, Sozobon's libc...) on ftp and get
osbind.h, maybe tos.h. These should hold the defines.

For aes.h and vdi.h I would recommend you get the gemfast-library and take
aesfast.h, gemfast.h, aesbind.h and vdibind.h as replacements. They will
work, at least if you define the TurboC-compatibility macro before
including gemfast.h.

Sorry, this is just for the sources. To understand what the library
functions do you should get one of the popular hypertexts. Have a look on
ftp for subdirectories "info", "hypertext", ... Maybe somebody else can
point you out particular documents, I can't...

Ciao

Guido

Same here. I got a PC in 1993, after using an Atari since 1985(!).

The Microsoft thing is solved here, by running Linux first, and
switching to OS/2 Warp later.

PacifiST is a nice addition as well.

The platform is alive and kicking here, and has been for 12(!) years.
I even might consider buying a TT within a few months.

Hi,

: >A few days ago we (New Beat Development) released a new preview of our
: >game Willie's Adventures.
:
: OK, I'll probably get shot for this, but maybe it's worth a try... Any
: chance of an STE version? :-)

Hehe, I'm afraid not. Although, I do think it would be more than possible
to do a STe version of it if you skip the background parallax scrolling.
We're not using any DSP code in the game besides the module player, and
the program code isn't using very many 68030 specific instructions.
The major work would be to convert all graphics from 64 colours to 16
colours I think. If some skilled graphic artist would do this for us and
we receieve enough feedback we might actually consider it.

All the best,
Daniel

638. Re: NOVA VDI & NEC M500

Newsgroup: comp.sys.atari.st
Date: 1997-04-11 00:00:00 UTC
From: prajoux@laas.fr
Message-ID: <5ilabc$6pg$1@laas.laas.fr>
Source record: 124260
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi,

I installed a NOVA VME PlusII 1 MB on August 96. It drives satisfactorily
a 17" color.

Since I made the installation several months ago, I do not remember
all the details, sorry. The memory I have of the installation is that
it is not intrinsically difficult. It becomes difficult because of
the language barrier. A good dictionnary is mandatory...

Here is what I can tell you.
Don't be afraid of using the Video Mode Generator. It is theoretically
true that you can damage your monitor if you sync it at a frequency which
is too high (although I would bet that recent monitors would simply not
accept to sync in this case). However, there is a safe procedure to
follow.
The VMG comes with a library of resolutions (.BIB file). Copy it in
a .BIB that will become your own library. Load the latter in the VMG.
It is possible under VMG to copy an existing resolution in a new one, and
then to edit its parameters. If you choose a resolution that you know
is suitable to your monitor, say 1024x768 at 70Hz or so, and make only
small variations in the parameters, there is no risk. It is possible
to ask the VMG to display the results of the current settings, which
it does by producing a rectangular grid. When you are happy, save the
resolution in your .BIB, adjust the monitor (especially the horizontal
vs vertical ratio) and exit the VMG.
Now, at the next reboot, intercept the MENU.PRG that you must have put
into the AUTO folder. It will display all the resolutions in the .BIB
file. Select your newly created resolution, save the choice and exit
MENU.PRG. You will get on your screen a superb desktop in the defined
resolution.
As soon as you become familiar with the VMG, use it to produce new
resolutions adapted to your needs and to your monitor. If you keep
the conservative attitude of modifying in relatively small amounts
each time, you won't break the monitor.

Hope this will help.
Regards.

I've been 'evolving' in the opposite direction since 1982 when I
purchased
my first computeran XT with 640K, one 5-1/4" 360K floppy drive and a
monitor
for 2 000$ It was awesome! BASIC, Fortran,... :^D
Then in 1987 I bought my first Atari, a 1040STe. At the same time I
bought
a 386DX@33MHz, and a 1040STfm which I gave to my daughter.
Then I bought a Falcon in 1992 and gave my nephews the STe, then I
bought a
1040STfm which I gave to my father, then I bought a 520ST which I gave
to
my mother, then I bought a MegaSTe. My lonely 386DX occassionaly make
noises
about being upgraded to a 486, but all my money and interest and time is
in
my Atari's.I run OS2(Warp) and Win3.11 on my 386DX(with 20 MB RAM),
mostly
so I give a sigh of relief when I turn to my bird to see my programs
open
and operate lickety-split.
Yes, don't sell your Atari.

Psstt wanna buy a good 386DX, cheap? :^)

bales@garonne.stortek.com continued:

B > * 1.2.2 Atari Monitors
B > If you want to display all ST screen resolutions with an
B > ST/STe/STf/STfm you need both types of monitors. Unless you
B > use a multisync.

You can use Sebra v1.33, a software emulator, to run ST High
programs on the color monitor. It is not totally satisfactory, but
is suitable for test purposes and occasional use.

B > *3.3 I want to replace my floppy drive. What should I do ?

B > MegaSTEs, Falcons and TTs can accept 1.44Mb floppy drives as
B > standard.

This should read: 'Most MegaSTe's, most TT's, and all Falcons...'
TOS 2.05 and TOS 3.01 and 3.05 TT's do not support HD drives.

C > moving toward PC/Windows (as an ADDITION, not a REPLACEMENT
C > for my several ST's). The reason(s); Web access, VGA
C > resolution.

With current prices on used TT's being what they are, why don't you consider one of them? There's your vga resolution. Or better, with a graphics card. They are also nifty, and fast (well, pretty fast). And I rather think that Web access is just about a done deal; CAB going commercial, Termite, and possibly others in the mix, means competition = quality. IMHO.

Just a thought.

That may be the reason some authow arranges with a magazine company to get
their program on the disk but the author is not the owner of the disk - the
magazine company is. And they offer cover disks to sell magazines -
not to get user software distributed far and wide.

On the cover disks, the magazine company is probably the copyright owner.
Oftentimes the magazine will specify the conditions (ie disk to be only
sold WITH magazine).

It work's very god for me to. I never had any problem's with any IMG file hight or
width.

The only differenxe I have is the animated gif that I make, they don't animate in
CAB v. 1.5 but fine in CAB v. 2.0.

I do most of the editing by hand using QED.APP from inside CAB v.2.0 and
it work's just great.

The situation is the same as any software. If the software was a
commercial package then the copyright still applies. The magazine
simply had a licence to distribute the software WITH the magazine and
hence the purchaser of the magazine would gain a license for the
software. Because of this it is a breach of copyright to distribute
copies of programs from cover disks (unless they are Freeware,
Shareware etc)

654. >4Mb on STE??

Newsgroup: comp.sys.atari.st
Date: 1997-04-12 00:00:00 UTC
From: Joakim H�gberg <gokmasebrulop@hotmail.com>
Message-ID: <335017CC.43CF@hotmail.com>
Source record: 124076

I have a question about the ram-memory on the STE. I have learned that
the STE can hold the standard 30pin Simm�s that are often used in PC�s.
Now my question(s) is:

```
*Is the 1 Mb simm the only one that will work, or is it possible with,
lets say 4Mb..?
```

*If that�s so, how much memory is it possible to install..?

655. Cubase and Geneva

>
> Thanks!
>
>Fran&#65533;ois Groulx

Hi Fran1ois,

Yes I use Cubase (v2.06) with Geneva (v.005) on my Falcon almost every time (except when that little bit of xtra memory becomes crucial). It really speeds up my working process to avoid rebootitus when I'm working on music with different music programs. The flags I check are the limit memory flag (so I can also use X-OR &/or Zero-X), maximize window areas & redraw upon exiting. That's it. Runs great providing everything else is asleep, i.e. single tasking mode.

hope this helps,

David Klimchak, Composer & Performer

So you can, once again, have the good feeling of buying a platform that's hanging on the edge of death. Plus, you can still get that angry feeling of walking in a software store, seeing 50 rows of Windows software versus maybe (if you're lucky) a box in the corner with 10 Macintosh software titles in it.

I tried the URL ftp://www.gui.uva.es/pub/atari/ at about 1:40pm Saturday CST, and the links work. The latest file date I could find was April 3, 1997, which may have been the most recent backup, or the date of the last mirror. Anyway, it looks like the links work. I only checked out a directory or two to see if some files down in the dir tree were available, and they were. So, you might want to verify links to files... Anyway, if there's another live cnam mirror, I'm unaware of it. Supposedly the above link has an http availability too, but I can't seem to find it ATM.

Be seeing you. (says #6)

Look Guys, what I do if I want any Atari shareware etc is two things:

http://www.shareware.com (or http://www.filez.com)

or better still: http://ftpsearch.ntnu.no/

the latter allows search criteria that can reveal dozens of other Atari
active repositories other than cnam...

Good luck.

Yes this is the only one out of all the suggestions I can find that
still exists :)..unfortunatly it isnt up to date and does not include
the 14 issues of st+ i recently uploaded, its a shame as one of the
others did include them, but then that went down as well ?,
Looks like I have lost them for good, hmm kinda puts you off
uploading, however i cant complain as at the end of the day those ftp
sites are doing us the service :)

Ho well one of those things... THANKS for passing on the url BTW , :)

Yeah that's right, you've only got 10 Works packages compared to 50
works packages on the PC, that's a good reason not to buy a Mac.
Remember, the quality, speed and ease of use of your machine is not
important nor is what you want to use it for, do you think that 17,000+
Mac apps will be enough for you?

Only in your dreams! The Falcon is stuck on 030 technology and the
graphics/video subsystem is outdated! This Phoenex is most likely
overpriced as the Hades is. PowerComputing's PowerCenter
150(ppc604/150mhz) for $1499! Price includes CDrom, ethernet

Get a Mac OS unit from the various manufacturers instead of a wintel
box. I would get a PowerComputing PowerCenter 150(604/150mhz) for
$1499. Price includes 16 megs, 1gig , ethernet, 16 bit sound, 2mb

vram, keyboard and software bundle. With Connectix Virtual PC, tou get
PC playable game performance, run OS2, wintel 95, NextStep and many
other OS's. Also you will get a free copy of the Be OS.
Plus you can get an Atari ST emulator keep your software investment.

Screw Wintel..Get a Mac OS solution plus Connectex Virtual PC - run
OS2, Wintel 95 and NextStep. Plus you can run newer OS's like Rhasopy
and the Be OS!

There are 6 slots for different keys for as many as 6 TOS versions.
Each TOS needs a fresh key: dom't ask me why!
You just need to send a fresh request for a key number, printed out
from the current OS you are using: no extra payment, as far as I know..

677. CAB 2.0 demo: lockup!

Newsgroup: comp.sys.atari.st
Date: 1997-04-12 00:00:00 UTC
From: savarez@connectum.skurup.se
Message-ID: <860884260_OASIS_@connectum.skurup.se>
Source record: 124099

Tested the CAB 2.0 demo.
Encountered a protected document on the web:

Cab asked for a username.
I clicked on 'CANCEL'.
CAB asked for a password.
I clicked on 'CANCEL'.
Cab asked for a username.
I clicked on 'CANCEL'.
CAB asked for a password.
I clicked on 'CANCEL'.
Cab asked for a username.
I clicked on 'CANCEL'.
CAB asked for a password.
I clicked on 'CANCEL'.
Cab asked for a username.
I clicked on 'CANCEL'.
CAB asked for a password.
I clicked on 'CANCEL'.

Finally broke the loop by switching off the modem.
Doesn't 'CANCEL' mean just that?

>TIA
>Martin

This thread is interesting.
I use the latest GlueSTiK and the 1.21 cab.ovl.
The CAB 1.5 and the CAB 2.0 demo run just fine (except 'mailto').
BUT maito does NOT work for me either.
I suspect the errors <transaction failed> and <read error file ">
are exactly the same.
CAB expects to find a file somewhere.....
The SMTP_MAILPATH parameter is totally ignored.
The path is always 'D:\CACHE\MAIL.TXT' at my end.
I edit and save the file and click on 'send.
The letter winds up in the drain....

Well this is cute...

Get people's attention with your header, give then a web site to go
to...and it's not even there.

Please someone tell me why people do this, without even giving a
reason for having people go to a web site in the first place...

Old Magazine coverdisks,

>Whats the situation for copying them? Is it Illegal? I suppose it is
>in a sense, BUT as the whole idea behind getting your software onto a
>cover disk is to get it spread far and wide then ?

If it's a PD/shareware program, then yeah do make copies and pass
them around! Cover disks are just on of the ways to get them passed
around.

As for commerical programs(most likely to be demos), then you can't
pass them around and put them on BBS's for example.

Can't see whu you can't make a backup of your coverdisk(which you
should) and put the programs you want to use on their own
floppies(which you really should do)

>EXAMPLE: STOS BASIC was given away on a cover disk, as was the
>compiler, would it be BAD to make a copy of the actual cover disk?

Yeah, I can only get STOS Basic and the complier from a
coverdisk...especially in the States where the ST mags from the UK
are bit more expensive because of importing and stuff. In fact, if
it weren't for ST Format I would have a big disk collection at all.

As for STOS, why don't the programmers just give the ok to release it
in public domain since they ain't getting money off of it anyways?

In fact, between the Top Notch extensions, Stosser disk mags, a new
STOS loader compatible with ALL Atari ST compatibles(A mere dream
years ago), and a big hunking STOS file site (thanx Tony)...STOS
would be so much better on a web site with some newer extensions
included in there.

Using Webspace is a real pain - Many features that seem to
be available are not selectable. The display quality is poor
even with clean HTML code. The main advantage of Webspace is
the speed which is nearly the same as Netscape. The E-Mail
module is available as an preview but it doesn't look like a proper
module. A News client is not available.
I don't use it for web surfing - only reviewed it in the
Atari Inside/ST Computer (rated 6 out of 10 points).

Does your friend Auto-folder or boot-sector boot HDDriver?

I had trouble with HDDriver v6 when it wouldn't recognise my SyQuest
EZ-135 when boot-sector booting. Auto-folder booting it worked fine.
My previous version of HDDriver, v3.51, was fine boot-sector booting.

Rich.

For sale:

Mega2+2 (4MB ST RAM)
w/ Turbo030 @40MHz +4MB 32-bit RAM + 68881 math coprocessor chip
(installed by Jim Allen of Fast Technology, even faster than a TT!)
Moniterm monitor (1280x960) w/ MegaST board. (Nice for DTP work)
original SM124 monitor.
Quantum Lt375 (375 MB SCSI 11ms) driven by ICD host adapter in pizza box.

MultiTos and SpeedoGDOS installed. All software included.
Prospero Developer's package, loaded.
Sell as whole system. Developer software, GNU C, etc.
$275.

Mega2+2 w/ Tweety board
w/ SM124 or SC1224
Seagate 96 MB SCSI mechanism. ICD host adpater in Atari pizza box.
My son's machine with software installed.
$175.

520ST @4 MB on Tech Specialties board
w/ SM124 or SC124 (depends which one you folks snatch up first)
2 Seagate 48 MB mechanisms, 2 floppies (1 is a 1.44 MB mechanism)
in an PC/XT case w/ 135W power supply.
$150.

Migraph handscanner with Touch UP software, $30.

External RF modulator for ST to run on TV, $25.

Misc softwares. Please ask me about them.

Contact me at fsctc@lerc.nasa.gov by email. Thanks.

I've finally got round to reading the manual for Apex, I got to the Tutorials section and struck a problem: One of the example files is missing! Does anyone out there have this file (STUCCO.JPG) or know where I can get it from and if so please will you tell me / E-mail it to me UUE compressed. It's by no means essential, but it would be nice...

Thanks in advance..........Doug

>The screenblaster is probably old, it's not a screenblaster II or III.
>The control software is version 1.01. Is there newer software for it?
>Anyone heard of screenblaster causing this kind of problem?
>
I updated my screenblaster software to version II recently. It has
new higher resolutions in 256 mode and ofcource I took it in use. But
then the problems started; when CAB was saving CACHE.CAB file (over
300 k large) system jammed several times. I returned back to 1024*768
16 color mode and no problems anymore.

I think that Screenblaster I/II/III or any other screenenchancer has
nothing to do with it. It is just the timing. Screen updates are very slow in
256 colormode in higher resolutions. Timing with HD has been problem
with Atari since beginning: too long cable to SH204 and crash!

I dont`t have this clockfix yet but I`m planning to make it. Hopefully
things get better.

> you simply connect to your TV antenna connector.

Small nitpick: STf does not have a RF modulator. you were probably
thinking of the STm or STfm which do.

Remember: for pre-STE machines the naming convention was:
"F" means "Floppy-drive", "M" means "Modulator"
(The "Mega ST" was essentially a "pizza-box STF" with detatchable keyboard)

So, the STf was "ST with builtin Floppy-drive"

>TIA
>Martin

Well, Martin you are at least persistant in getting Mailto: to work on your TT. I've been using this feature of CAB for months now with no problems on my 14meg Falcon TOS 4.04. It works with CAB v1.41...v2.0 and STiK 1.08, 1.12 and CAB.OVL's v1.18, 1.20, 1.21. However, I don't know anyone using a TT and MiNT (or GlueStick) with it working!

If anyone else has Mailto working, maybe they can respond on how they did.

First, Mailto must create a file MAIL.TXT in cache ex. M:\WWWCACHE\MAIL.TXT\ which must be saved, then it's deleted upon sending. If CAB can't find this file, then you'll get an error message ;)

For myself, It's been a while since I set it up. I remember it was a bit tricky, but once it worked, it has always worked through the various upgrades to CAB/STiK/OVL's. I mentioned before the Stik defaults in the conf files, but if I remember correctly, the settings in the CAB Options Server/Proxy were odd. If I put anything in the NNPT, mailto didn't work! As a matter of fact, I *only* have SMPT set with the Host Name. You might experiment with this setting and the corresponding SMPT_HOST in the confs. Are you using QED as a Text Editor? It seems to work well with CAB, etc.

This may be a waste of time as a Net friend, who knows more HTML coding than I ever will, has not got mailto to work on his TT (Not sure if he uses MiNT and/or GlueStik).

C'est la Vie,

Charles

Goetz Hoffart wrote:

> The root of GEMDOS drives is limitated, too, but not the content of folders.

The size of the root directory, i. e. the maximum number of files in
this directory, is determined when partitioning. Some tools allow to
change this size when partitioning. This is especially useful for VFAT
partitions with long filenames because here a single file often uses
several directory entries.

Hi!

I have problems in writing a working CHATFILE for MiNTNET (PPP Kit).

A few questions:

1. How I can send a carriage return <CR>? My provider require sending
three blind <CR> before entering my user number and password.

2. How I can echo the initial connect sequence (CHATFILE) on the
screen to verify that my script work correctly?

3. Is it supported PAP autentication supported by MiNTNet?

Thank you,

Lodovico

Yes indeed. get a newer version of HDDriver. I believe that the current version of HDDriver is 6.20, and it specifically supports the new features of the ZIP and JAZ drives, among other cool features being added from the version you're using.

I've used N.AES for months now, and IMHO it wins hands on when you
compare it to MagiC, Geneva and MultiTOS. It's fast, very compatible,
has the features I need and works perfectly with MiNTOS. My current
setup is perhaps the best OS I've ever used on an Atari.

It's cheap too (DM50,- for MultiTOS-upgrade, DM99,- normal price.),
the only downside is that there's no english version available.

Use \r as below:

"" AT&D0
OK atdt0111222333
"CONNECT" \r\r
serid: username
word? password

>2. How I can echo the initial connect sequence (CHATFILE) on the
>screen to verify that my script work correctly?

Edit your '/etc/syslog.con' file.
The message output can be directed where you want.
'/dev/console' will print them om screen!
To quiet them down completely, change to '/dev/null'.
(Do save the original first.)

>3. Is it supported PAP autentication supported by MiNTNet?

Yes, but I found the the synthax of the '/etc/ppp/pap-secr' file unclear.

Instead I did this:

my 'connect.scr' file:
---
pppd file u:/etc/connect +ua u:/etc/secret

My 'secret' file:
---
username
password

The +ua option is obsolete, but works!

Good luck to you!

Hi Tony,
On the few occasions that we wanted to add a particular cover disk prog to our library we always contacted the company/person that released the program for permission, we got permission 50/50, some wanted the extra distribution, others had released the prog under a strict licence with the mag publishers who were allowed to put the prog on the one coverdisk, for sale with the magazine, once only. No other distribution allowed.
This was why there was once a problem with the wide boys selling dozens of loose magazine coverdisks at car boot sales & computer shows, the stories made the papers I seem to recall.
I wold expect that assuming you got the disk from a magazine that you have purchased that no copyright owner would object to you making a copy for your own use, indeed some of the disks will have instructions that they should be copied before use, Didn't one of the mags have a copy prog included on the disk every month just for that purpose?
Were you to mass produce the disks for personal gain you may raise a few eyebrows tho' :)
Thats my 2p in for what it's worth.

No. You need a key for each OS but it has 6 keyslots, I know I had
1.6,2.06 & Magic :)

> The funny thing is that I tried running 'Connect' today with MagiC- the

I don't think it's a bug, otherwise it wouldn't let you have 6 keys.
I've no idea how you managed to get it working thst one time though.

I'm confident that it is illegal , ST Format always used to make it
clear that you couldn't copy the stuff on the disks, they are likely to
be specially licenced for distribution with the magazine.

Good job I typed it all out last night then eh. Download my
MSA-to-ST converter, new version 1.1, from my ST page:

http://www.jetman.demon.co.uk/st/index.html

In the accompanying docs the MSA format is explained and there's
a brief rundown on .ST as well.

>>an original ST
>
>Infact PacifiST is A LOT better that a real ST, It has everything the ST

Nagh, I use both on a daily basis for different tasks, I was pointing
out that an emulator will not replace the real thing, not knocking
PaCifiST as everyone should know I support PaCifiST fully :)

>had plus You get a 2000 Mb Hard drive, A 8 speed CD-Rom, 14 Megs of

What the hell would you want with 14 meg of memory on a STFM? and you
can have Gig Hard Drives and a CD on an ATARI anyway ?

>memory, a faster that 16mhz CPU, Ability to switch beetween all 5 Tos

You can have faster than 16 on an ATARI if you want?,

>versions, Colour and Monochrome on the same monitor. and it runs most

You can only have thse extra tos versions illegally, unless of course
you own 5 ATARI machines,and again, why would you want them?

>Programs perfectly.

And there we have it.....runs MOST programs perfectly, and this is
why it can never fully replace the real thing?

>> tsk...I use 0.41 on my 486DX4-100 (running win95) and it runs at 100%
>>with sound NOT enabled...and maybe 80% with sound enabled,
>>
>I have a p133 and with sound enabled The speed it upto 300% of an STE.

Actualy it doesent run ANY % of your STe as PaCifiST at this point is
a ATARI * FM * emulator??

Don't get me wrong here, I support the PaCifisST emulator to the
point of contacting and contributing to the Author, I use it regularly
NOT for games but for testing my web page for ATARI compat, for the
MONO that I wouldnt otherwise have access to and for Graphic file
converting amongst other things, And I have set up a lot of software

for download and instant use on the emulator (see sig for url)

But I would still stand by the statement that an emulator will never replace the real thing, Just like a wig wont bring back my hair :)))))) hehehehehhehe

snippo....

OK Now I know a little more:)...I may as well forget it, I simply
wanted to know if it was a loophole?<smile>

>Were you to mass produce the disks for personal gain you may raise a
>few eyebrows tho' :)

Yes I should think so...however the idea was as you may have been
able to see, was to be able to copy STOS without anyone complaining by
simply copying the cover disk?, for profit? me? FREEWARE RULEZ :))))

I spoke to europress (They own the rights to SELL STOS and thats all)
and they said

"No one here or the original programmers would be able to find the
time to do anything with STOS BASIC in any form"

I spoke to Constantin Sotoropolous the Founder and original Author of
STOS, He says he will do all he can to help, but he is only one third
Copyright owner, with Jawx (I never knew that was a person) and the
other author being the other two part copyright owners...
Unfortunatly that was a while ago and nothing since,:((

So it would seem the copyright owners and the selling rights people
have absoloutly no interest in the product, and even though its been
on a cover disk TWICE it is still illegal to copy it...

Ha well I have a copy so what the hell :))) but still a stupid
situation ?

>Thats my 2p in for what it's worth.

Bought it MIDEX+ in 1992, runs here with a 4meg STE (NVDI 2.5,ICD-Link,44meg Syquest,Cubase2.0), has been with me ever since, do also syncing to ADAT with it. Did soundtracks & productions with it.

Works very well. (some grounding probs, have to connect the SMTPE In&Out a certain way, but that could just be me)

Specs:
4 MIDI outs (gives you a total of 5 outs (=80 MIDI channels) on the ST)
2 MIDI ins
SMPTE in
SMPTE out
4 Cartridge Slots

My first and second TT030 all had internal 1.44 floppy drives that work
just fine. I even use and external 1.44 floppy drive on both TTs.
I do believe that TT's with TOS 3.06 have were manufactured for 1.44
floppy drives you might consider have your machine upgraded to TOS 3.06.

> to believe)?

The key for CoNnect is based on your TOS version. By installing MagiC
you have effectively changed this so you need a new key. CoNnect can
retain up to 6 such keys at a time. Contact your distributor. The new
key _should_ be free. I've had to do this 4 times, tha last when changing
from MagiC4 to 5. It's a stupid annoying system.

724. SCSI Problems with TT.... HELP!!!!!

Newsgroup: comp.sys.atari.st
Date: 1997-04-13 00:00:00 UTC
From: Keith Brooks <newhoriz@cadvision.com>
Message-ID: <33511464.5C6D@cadvision.com>
Source record: 123976

HELP!!!! I've been having weird problems with my TT. I thought it was something to do with my SCSI hookups to all the peripherals but this morning I disconnected all the drives, CD's, tape, Zip drive and scanner. The problem persists so it must be internal to the TT!!

I've been wanting to use the HD Driver I got but I can't get a known reliable backup done to my tape drive so I can't be sure if I re-partition my internal Conner 2Gig that I'll be able to restore the files to it after HDD is installed.

I used DB3 to backup to the Conner 2Gig tape drive. DB3 reported the backup of partitions C-G was complete. I wanted to verify that the backup was good so I tried to restore one folder off the tape to my Syquest 44 in the external mini-tower I have. What I asked was to have the ExtenDos folder restored to the Syquest. What I got was an empty CPX folder on Drive C and my AUTO folder renamed to garbage characters so that I had to reboot from a floppy. Nothing was written to the Syquest. Hmmm... I said. Let's try Gemar 3.06. Yes, it runs but when I ask it to backup the Conner drive, MagiC crashes with "destroyed memory block" and bye-bye to that! Ok, so I'm not going to get a reliable backup that way. On to the next problem.

When I run ICD's IDCHECK.PRG, sometimes it fails to show the Epson scanner but if I push the reset button on the scanner and rescan with IDCHECK, then the scanner shows up at the right ID #. All other devices are where they should be no matter what. However, when I run RELOG.PRG or use the ADSCSI.CPX to relog the drives, all my hard drive icons disappear from the desktop and I get a message from TOS/MagiC that Drive C does not exist. I have to reboot and up comes my normal desktop. All the partitions are there, makes no difference if I have the external devices connected or not. The minute I ask for a relog or even change Zip cartridges, bye-bye to the icons and the usual message of no Drive C exists.

I thought maybe the ICDBOOT.SYS on the drive was somehow corrupted so I ran the HDUTIL.PRG to reconfigure the boot. I get a 68000 exception message that says an error "-69" has occurred, whatever that means.

So, here I sit unable to use HD Driver because I can't reliably backup the damn hard drive. Has anyone in the Atari community any ideas what in hell is going on with my drive or the TT?

Thanks all!

Keith

Nope, sorry to say that you can only use the 1 meg versions. They need to
be of the same speed rating, type, and parity also... (80ns to 120 ns is
fine) You wind up with a total of 4 megs of Ram which, on an STe will meet
probably 956f all your demands. Have fun! :)

Thats funny. I'm running 1024*768 32 bit color on my Falcon right now
(as Phoenix is rendering in the background). What is your current
resolution? I choose to make my own decission on which CD Rom I
use on my machine, not some cheap piece of shit Mac after though that
is several years out of date. As for the ethernet, i'm not sending this
from school or work, so that point is mute. I don't think any of the
clones offer it as standard.

> Nah, the authors of individual packages are the copyright owners
> unless specifically stated otherwise; the magazines simply
> distributed the packages and have no copyright claim.

It was my understanding that the programs on the disc would remain the copyright of the authors of the programs.

However, ST Format (or, for that matter anyone who puts a coverdisc together) _does_ have copyright on the collection.

A hypothetical example to illustrate this:

I put together a coverdisc for the Gargoyle Programmers Monthly. This issue I put STOS Basic and Lattice C on a cover disc, having got permission from known copyright holders to do so.

The copyright situation would then be as follows:
1) Mandarin still owns copyright to STOS.

2) Hisoft still has copyright to Lattice.

3) I own copyright to my arrangement/compilation of the disc.

As with all things on this subject I must add: IANAL.

(Oh, and for those unfamiliar with the acronym: "IANAL" translates into "I Am Not A Lawyer")

->:-(That included an email package (SOUP offline file) which I'll have to
->try to ask my provider to find the backup.

-> "Invalid header, use PKZIPFIX to fix"

I had that problem too. What pkzipfix does is add or delete 1 or 2 null
bytes to the end of the zipfile. I read this in the docs of an Atari prog
but don't remember what it was.

->This sounds like a PC file (i.e. "Pkzip"/"Pkunzip"), but if it is, how on
->earth am I able to fix my .ZIP files when I don't have a PC?

PC Ditto???! But there is no such thing as a PC Zipfile. They are the same
on any OS.

->comparing the file lengths with the log from "Connect" I can see very minor
->differences (i.e. the downloaded files are 2 bytes smaller than when sent)
->I guess this means that my own computer must have garbled up the data

Probably not your computer garbling data. Not if you have the same problem
I had, anyway.

->somehow, but why?

Do you have a .mime.types file in your home dir on your ISP?

From: jperez@Hawaii.Edu
Message-ID: <5iqbqg$5u2@news.Hawaii.Edu>
Source record: 124028

HELP!

I have a Seagate Barracuda 4 (ST15150N) that I was intending to use for audio recording (With Cubase Audio or Logic Audio) but it is too slow. The access time is 8ms, but the data transfer rate is hardly above 1400k/second. My old Quantum LPS540 exceeds 1800k/second.

Can anyone recommend a fast high capacity SCSI hard disk? Apparently, the specs that most drives list are for Synchronous operation, and in that the Falcon SCSI is Asynchronous, I cannot determine what drives may be right for me. If you are using your Falcon for hard disk recording, and can achieve more than 4 tracks of audio playback, please let me know what you are using.

Thanks!

f> the Mac(IIci) & the STE.
f>
f> Is it possible to format the Drive with DOS, so both the Mac&ST can read
f> it ?

Yes I do it with my SyQuest EZ135. Formatting VFAT windows95 lets you use
long names too. You must use the PC "old" partition scheme, you can use
AFDISK on a PC or other Atari-Mac utilities to partition, then do a PC-VFAT
format. Then use the VFAT partitions with MagiC 5 on the Atari, and DOS
Mounter 95 on the Mac.

If you do not need long names, and do not have MagiC, use BIGdos on the
Atari, and DOSmounter or PCExchange on the mac.

Hi Atari folks out there

I having problem with my SLM804 printer cos it prints out nothing when I send a test print to it. I just changed the drum and the toner cos I have not been using the printer for more than 8 months. I was away abroad for that period. Previously it printed fine until I replaced the old drum and toner. Can anyone suggest ?

Surely you can manage more than 16 colours on an STE? Well anyway, where are all those skilled graphics people then? Any STE owners who might be interested, this is a *very* cool looking Falcon platformer, so register your vote. I saw an early demo version which was quite impressive, so if it's supposedly even better now...

Yeagh, I recently spoke to one of the original authors who agrees,
infortunatly he is only one third copyright owner, although he said he
would do as much as he could to help, he finished off by saying he
would try and get hold of the other two, that was just before
Christmas and he hasnt got back to me since, so looks a little hard
work getting any answer now :(,The 3 authors are the copyright owners,
no one else?

Yes it does work well,

ST + are advertising for FREE in Micro Mart, PC Mart, His local
television (suprised me as well), the Internet and BBS systems, the PC
market for the emulators and many other ways, all free advertising,
that incidently anyone can do?

For anyone else reading even none UK, a very good way is using
Goodmans and Floppyshop Public Domain Libraries to stock your software
or whatever, they send out updates to there customers, paper based

catalogue updates usualy, and they send out to thousands of ATARI
users, (just a helpfull tip for anyone)

The PC has always been able to read a disk formatted on an ATARI, it
has nothing to do with pacifist or anything else, An ATARI will also
read a PC disk if formatted with the 720 option in your PC formatter,
sorry but nothing special there :)

>Has anyone else been able to do this? Or am I having a dream. BTW all
>programs that have been transfered from my ST disks to my PC harddrive
>work as intended...

Yes they will, pacifist will run programs direct from your PC hard
drive, I run first word, CAB , Imagecopy4, packice, mega depack, and
many other programs straight from the hard drive, this has always been
the case, however some programs need to run from drive A as a disk
image :) or drive B or whatever :)

747. atari 520ST printed manual/documents

Newsgroup: comp.sys.atari.st
Date: 1997-04-13 00:00:00 UTC
From: Administrator <webmaster@tanganika.com>
Message-ID: <33510146.6227@tanganika.com>
Source record: 124040

Hello,

I friend of mine bought an old, used, Atari 520st(fm) with an SM124
Monitor plus the program CUBASE.

Since it was all second-hand hardware and software there was no printed
manuals and docs included.

Is there anybody able to give me any lead about getting printed manuals
etc. of all above indicated hardware and software please ?

Thanks !!!!

Maurizio Mattoli

Hi Leute!

Wie kann man von Atari-Disketten Cubase-Songdateien auf den PC bekommen?

1) Zun=E4chst gibt=B4s da ja das Problem, da=DF Atari zwar ein DOS-kompat=
ibles
FAT-Filesystem benutzt, aber einen inkompatiblen Bootsektor auf die
Disketten schreibt. Es soll daf=FCr ein Tool geben, welches den Bootsekto=
r
patcht, soda=DF die Diskette auf beiden Systemen gelesen werden kann.
Wer wei=DF, wo dieses Tool erh=E4ltlich ist oder wei=DF, wo was gepatched=

werden mu=DF?

2) M=FCssen die .ALL-Dateien irgendwie konvertiert werden, damit sie auf
dem PC in Cubase eingelesen werden k=F6nnen? Gibt=B4s da ebenfalls ein To=
ol
daf=FCr? Zwar steht im Handbuch von Cubae 3.04, da=DF =E4ltere Versionen
eingelesen werden k=F6nnen, aber mir ist das noch nicht gelungen.

bye, Thomas.

751. Falcon Sampling

Newsgroup: comp.sys.atari.st
Date: 1997-04-13 00:00:00 UTC
From: Simon Yardley <si@zetnet.co.uk>
Message-ID: <335100F9.77C7@zetnet.co.uk>
Source record: 124044

Hi dudes,

Wonder if anyone can shed some light on this for me.

I would like to sample directly from an electric guitar Amp into my Falcon.

The guitar Amp has a headphone Audio-out socket which you can listen to the guitar with a pair of headphones or should in theory be able to put a lead between the headphone socket and the Falcons Audio-in socket.

When I do this I get a loud buzzing sound and cannot make out what is played.

Has anyone else successfully played a guitar through the Falcon in real-time allowing you to put various DSP effects on the sound or is it not possible ???

Does it sound like my Falcon has a fault or do I need to go through another (Hi-Fi?) Amp to get the right type of signal to feed into my Falcon ???

E-mails and/or reposts appreciated ...

Simon

Hello!

My neighbour (who is 76 and never worked with a computer before) just received an Atari 520ST. As he knows that I've got a PC, he asked me for help. Now I've got the following questions:

* The mouse is moving on the screen, but when I klick on it, nothing happens...

* when I use the arrows on the keyboard, nothing happens.

The result is, that I can't open or close anything... Who can help us??? Many, many thanks on forehand for any help! Please mail me at: psaey@ix.urz.uni-heidelberg.de

Regards from Heidelberg, Germany

Paul

I'm pretty sure it runs fine.
You might want to limit the memory of Cubase if it tries to steal it
all. I seemed to remember there was a problem with Cubase Audio and
accessing the module list (???) but running in Single-Tasking mode
sorted out that problem ...

Some STe stuff won't run on an ST at all; some early games won't
run on TOS 1.2, but will run on TOS 1.0 and 1.4, etc.

In some respects, yes. Overall, well - for what purpose? It's
like saying a Mac is better than a PC without any more detail.

A long time ago I've had the same problem. I'm maybe wrong but I think
I could unzip the so called damaged archive with unzip5.13.
This unzip.ttp is part of zip20. I can't remember me where I've found
it, but anyway if you've a little patience you will find it at the
Belgium ftp site 193.190.205.13 /archive/atari/archivers/
I've uploaded zip20 (zip20.lzh) to this site just a hour ago. I think
the archive will be on the public dir monday evening.

Hope this help

>> An Atari user since the 400 with an 810 tape drive,

c> I think I made a mistake...wasn't the tape drive 410, and the disk
c> drive 810?

Correct. Most of the peripherals at that time were in the 800 range, presumably since Atari expected them to be connected to the more expandable 800. I remember the Atari 825 Centronics printer, 850 RS232 and parallel port expansion module, amongst others.

Don't blow your hard earned money on a mac...I have a P166 32 megs
memory for what a Mac costs...consider the software availability..no
comparison. While Mac is nice, it is going down the same path that
Amiga, and Atari did...dead and gone.

Just verify if one of the two "corona" are not breaked ... these are
two very thin gold plated metal wires which are used to put some
magnetic field on the paper sheet ... if one of them is cut, then you
will have nothing printed !!!
You can easily replace them by asking thid service at a photocopier
maintenance shop ... it will cost about nothing !
I really would like to make that myself because it's not so difficult
and the Atari lasers are very often out with this kind of trouble ...
but if only I could find a corona coil smewhere ...

Regards
Jo

>I edit and save the file and click on 'send.
>The letter winds up in the drain....

Right now I'm using CAB 2.0 demo and cab.ovl 1.18 (cab.ovl 121
seems not to work with my settings. I use proxy's). Apparently if I
follow a mailto tag the mail is send. I do get a connecting to host
and a 'transaction successful' message. I suppose that after a
successful posting the original message is deleted from the
harddisk but after the posting the mail.txt is still on my
harddisk. Therefore I've the strong feeling the message isn't send
at all. With CAB 1.5 I still get the <read error file "> although I
use the same settings (proxy's etc.)
Apart from the mailto problem the rest works well. I can follow
gopher and ftp. This was impossible with the cab-for-mintnet
overlay.
One problem. When I look to the cache I see files dated 01.01.2098
or 31.12.1989. Cab is maybe some kind of time machine ;-)

I'm sorry to tell you that copyright laws cpntinue to apply even
when the copyright holder is out of business so the only legal
way to get TOS 2.06 is to but the ROMs yourself. Can STonX use
Magic the way gemulator can? You might find that a better overall
solution anyway since you also get multitasking, color icons,\
long filenames, etc.

Your info is useful. I use HCopy, and have seen the Dips.cpx. But for a newbie faq, I think my earlier statement is what is needed, and I stand by it. And there is some question (at least in /my/ mind) whether doing hd stuff without the ajax is really wise. So I have been very cautious.

You could check out ImageCopy, which has always supported the DeskJet line very well. There is also a cpx that supports the LaserJet that is said to do very well by the DeskJets, too. It is German, so I have had less than perfect success using it. It is shareware by Donald Bork, 1993.

Does the DJ400 use the same Printer Control Language as the older 500s?

Hi!

Where can I find STonx, or rather the sources for it?

I can't access them from the official homepage, so I need an alternative URL: .

I got an older version of it, but all I get with that one is a blank window.

/-Mikke/ M.

This isn't the place for an advocacy debate so if you want to carry this on then please note the follow-ups. You have a P166 with 32 for what a Mac costs, what sort of mac? A mac better or worse than your PC? FYI Mac market share is growing and PC market share is shrinking. You also mention software availability, what decent PC product does not exist/have an equivalent on a mac (with the exclusion of games, admittedly the Macs weak spot)?

ST+ Diskmagazine will be at the UK ATARI Shows in Birmingham and
London, The Editor Dave Hollis along with a few contributors will be
in attendance, An ATARI with the Show release Issue 16 of ST+ will be
available as well as a machine set up for real time articles where you
can contribute your views on the Shows, ST+ or anything ATARI related,

Watch out as Dave will have his trusty Camera :)

The Following Issue 17 of ST+ to be released at the and of May will
feature the articles, lots of show reviews and reports as well as 256
colour digitised pictures viewable from within ST+ Diskzine,

So come along to the ST+ Stand at the show, and if you can't get
there then be sure to download your copy of ST+ 17 featuring
everything you want to know and see about the UK ATARI shows,

Cheers !ynoT (ATARI Programmer)

I'm glad you think the Amiga is dead and gone. Perhaps you should
inform Gateway 2000 of this, they don't seem to have heard.

My advice is: if you're mostly interested in games, but a PC. Otherwise
buy a PowerPC CPU based machine with confidence. They are the future.

Finally, a discussion on the relative merits of one computer against
another does not belong here but in comp.os.x.advocacy. Asking what
everyone thinks of buying a PC is flamebait likely to start a war!

FPINTO wrote this to All about Anyone using MIDEX from Steinberg?:
F> If so, which machine, I'm looking for some specs. let me
F> know. Thanks! _Phil.

Hi Phil,
I used to have a Midex+ when I had my Mega4ST, 4MB STe and 1040STfm.
When I changed to the Falcon, I had to sell the Midex because it wouldn't work
properly with Cubase Audio - it wasn't designed for the speed according to
Steinberg...
Now I use an MO4 to get 4 extra midi outputs and a Merge box for extra inputs.

Best regards,

Claes

Source record: 124114

I have been using PaCifiST for awhile now it works great. I have yet to make a image of my ST disks. I found that for some reason that my 586 reads my atari disk. This allows me to copy the whole disk to my PC Harddive. This only can be accomplished while in windows PaCifiST is not running or involved in this weird happening. I have tried before to read A ST disk but, nothing now I read it like it was a PC disk.
Has anyone else been able to do this? Or am I having a dream. BTW all programs that have been transfered from my ST disks to my PC harddrive work as intended...

Don

h> I am writing because I want to solve my long time problem of having the
h> wrong time on my system.
h>
h> You see, here's what I have:
h>
h> Mega STe
h> ADSCI + hard drive card(built in clock)
h>
h> I am just trying to find a way to have my clock on the right time. When
h> I set one of them(I can never tell which one it is), it always reverts
h> back to the old time.

It sounds like its time for a new battery in your System

The software in the ICDDRIVER sets the system clock from this ADSCI card at
boot and re-boot, so if the system clocks wrong then the Adscsi one gave it
bullshit, or your ICD driver is corrupt and is incorrectly setting things.

h> My question is: could I turn off the 'set time' option from the ADSCI+
h> card to the internal clock.

That would help to decide which battery is failed?.

h> Then, some how, set the internal clock of the Mega STE?? If I can change
h> the internal clock, can I ask how??

You can use Xcontrol to do that, then it should remember the time after a
powerdown, if it doesnt then the Mega's battery is possibly failed.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

Loads of sarcarsm, yes, but also irony in that it could be viewed by an outsider in exactly the same way that you viewed the press release - if the reader was that way inclined. The point being that the judgement is in the eye of the reader - not something the writer can control without compromising what they write.

>>> 1) I suggested that they contact ALL the diskmags and advertise..
> 2 and 3...snipped...
>
>> These are all very good suggestions.
> Hmmm definatly setting me up here <g>

Blimey you're suspicious!

Loads of new groups want and need to advertise if they want to be successful. It's just a matter of having the right ideas to do it. You suggested some good ones and you also mentioned that cross-platform advertising can also work. ISTR that both WAG and WSAUG (as it was back then) had some success by putting their names forward to the User Group section of Computer Shopper - so it's a good idea and has already been shown to work.

>>> AAUG...I can only presume you don't want that advertising? I offered

789. ATARI REBORN!!!!!

Newsgroup: comp.sys.atari.st
Date: 1997-04-13 00:00:00 UTC
From: pir8jim@pirate.com
Message-ID: <33506595.731A@pirate.com>
Source record: 124122

Well Folks,

I see a new era coming for the ST.

ATARI is REBORN into the image of a PC!

PaCifiST has improved the ST line.

Let's call this the Turbo STE Line!!???

How does that sound?

> The above set up works fine with icd pro 6.55. Any ideas?

I guess you use bad cables or the drives aren't correctly terminated.
Although the current versoion of HDDRIVER is 6.2 (with support for
special ZIP/JAZ features) 4.6 should recognize your drive.

791. STiK on an old MegaST

Newsgroup: comp.sys.atari.st
Date: 1997-04-14 00:00:00 UTC
From: Andreas Kessen <kessen@mathi.uni-heidelberg.de>
Message-ID: <33526A59.6B0EAB6A@mathi.uni-heidelberg.de>
Source record: 123924

Hi out there ...

I've got a little trouble with my friend's Atari MegaST. I've got a small
Computer Network at home. All the Computers are running Linux DOS or Windows,
and they're wired with an RG58 Ethernet Cable. The only guy who's got no x86'er
machine is the Problem. He's got an Atari, but I've got no idea how to implement
the IP-Stack on this kind of machine.

The Machine:
----
* MegaST 1MB RAM (68000)
* MagiC 4.0
* NVDI version ???
* STiK version December 1996

history (of what we've tried so far:)
----
* The Atari MegaST is connected to a LINUX-Computer via an RS232 Cable (all 9 pins).
* the LINUX-Machine is running a normal getty on this device
* Normal connects using a Terminalsoftware (Rufus) are stable and "fast" (9600)
there are no problems using hardware/XonXoff or no handshaking signal ...
everything ist fine so far ...
* After a long search for suitable software the STiK Package seemd to be THE
solution: The setup-programm installed the Software successfully. And the
Configuration was ok, but there appeared no "STiK" in the Deskmenu-Bar !?
even after several reboots.
* We moved the C:\STICK_CFG\STIK.PRG to C:\STICK.APP and after the next reboot we
got the "STiK" in the menu bar... *luck*
* We were able to connect to the "Server" and we even managed to start a telnet session. But the speed was bad! ... and after pressing a few keys the
connection broke down!
* We decided to change the Timeslices under MagiC to get better performance of

the background processes ... but it just delayed the system-breakdown
a
few moments. We raised the priority of the Backround-processes ... but
no
effect :-(
* I tried to turn off the NVDI-Driver ... but the results got worse, so
I
switched it on again.

I've been Working with PC's with SUNs ... a C64 an Amiga ... a few HP's
but
I know nothing about Atari !!!

Can anyone tell me how to configure the system correctly ?? ...

Thank you in advance :-)

Andy

Manuals for the ST would be hard to come by, fortunately there wasn't
all
that info in them anyway. check out the sites below for FAQ's, which
should be very usefull
good luck.bonne chance
ST FTP site list:
<ftp://ftp.sn.no/user/hallvart/atari/info/ftplist.txt>
-Atari ST FTP access :
<http://home.sn.no/~hallvart/pages/atari_ftp.html>
-Atari ST WWW section : <http://home.sn.no/~hallvart/pages/atari.html>
-Atari ST essentials : <ftp://ftp.sn.no/user/hallvart/atari/>

This is the info I have for "Sound on(in?) sound
It is the 'Bass boost mod'
-change C58 and C59 from 100pF to 1000pF
-change R123 and R130 from 10K to 15K
-change R59 and R68 from 100K to 4.7K
-change C95 and C90 from 0.033yF to 1K resistors
Is this pretty much it for the bass boost mod?
thanks.merci

796. BILLY BOY

Newsgroup: comp.sys.atari.st
Date: 1997-04-14 00:00:00 UTC
From: !ynoT
Message-ID: <335c7e2e.8251716@news.airtime.co.uk>
Source record: 123929

STOSSER Software April 1997
Billy Boy
Childrens Platform Game
http://www.airtime.co.uk/users/stosser

An STe Title, That will also work on an FM,It is Important that
One meg owners should run this game from an Auto Folder.
Please do not run on anything higher than a Mega Ste, This game
is not Falcon or TT Compatable.

This game is FREE

Program By.....Tony Greenwood
Artwork By.....Dean Chadwick
Level Designer.....Adrian Samm
Level/Game Tester.....Andrew Robertson
Machine/Tos Testing.....Tom Lamparty

This Game is Commentware, So please write to us,

Billy boy is a nice and simple platform game,you find yourself in
various enchanted lands, You should simply find the guardian who
will let you out, unfortunatly that is out of one, and straight
back into another,

Along the way collecting yellow stars will enhance your score,
Pressing the appropriate buttons will eventualy reveal a pink Star
and it is advisable to collect this before completing each level,

The Charactors roaming each Land will reduce your energy if you
come into close contact with them, You can jump on most of them
sending them into the ground, but they will work there way back to
the surface,

Food can be found and collected to boost your energy levels,

B.O.N.U.S. Baloons holding the letters to make up the word BONUS
should be collected, if at the end of the level you have the Bonus
then you will start the next level with 100 health points, If not
then you have your health, but if less than 20 units then we will
increase it to give you at least a sporting chance, carefull!
baloons with no letters can seriously damage your health,

Cheers !ynoT (ATARI Programmer)

May I invite users of comp.sys.atari.st to visit the new Elysium Atari & TOS Compatible WWW pages that reside at:

http://www.users.zetnet.co.uk/aseabrook/a_index.htm

The site is still under construction, but a carefully crafted and comprehensive list of WWW, Usenet and FTP site links, each with descriptions, is ready for access, plus a few other things such as a detailed list of Atari and TOS compatible computers and their specifications.

I hope you find the site useful, and I can assure you all that more work will be put into the site over the coming days, weeks and months. Please feel free to comment and contribute - I intend the pages to be a useful resource for all Atari and TOS compatible users.

Hi!

Gemulator 96 doesn't start as expected with Magic 5.03 English version.
I have put every file as explained in the readme file on the gemulator disk,
but all I get when I start the Gemulator program, is a message telling me:

Offscreen-Treiber nichs gefunden.
MCMD wird gestartet...
System wird angehalten.

What's wrong? Any suggestions are welcome!

Should be fine, it used to need a patch but I'm not sure if it does
anymore, it will work with the patch anyway.

> but I was also considering buying First Word &
> Calamus, or Calamus SL second hand. Before I jump for these I would have
> liked to know about compatibility.

They are GEM programs I wouldn't expect any problems, System Solutions
specifically state Calamus SL as being a program that would work.
Personally I wouldn't advise 1st Word atall, there are much better WPs
as Shareware IMHO.

> If a list exists somwhere I would be interested, but I would assume
> other users might also like to know, if only to help plan purchases.
> Guidance about the necessary configurations, ie. single running only,
> might also be very useful.

Basically it is more likely that you'll find a list of things that
wouldn't run, it'd be a much shorter list. The only things that
probably wonj't like it are programs written in STOS, Commercial Games
and most PD games & Some sequencing software eg Notator. If it's a GEM
program and written anything close to recently then you should be
perfectly OK, many non-Gem prams will work fine too BTW.

Alta Vista works fine for me with all versions of CAB between 1.0 and
1.5. I don't use the commercial version yet.
There are different sites to access Alta Vista. The one I never had any
problems with is: <http://www.altavista.digital.com/>

I rarely tried any other search engine because IMHO Alta Vista is superior
to all of them.

Good Luck,

Alex

Everyone,

Sorry about posting my program to this and the other two Atari newsgroups. I have been living in a vacuum over here in the U.S. and I do not have much experience with the internet. I have been programming on my own over here since 1989 and I think I have quite a few good ideas for the Atari and MagiC. Also, I think I could help out with many GFA problems people have because I've had to figure many of them out for myself.

COULD ANYONE PLEASE tell me how to remove my BENCHTEST posts and tell me the CORRECT way to give my program out to anyone that's interested. Until I wrote this program, I had no idea, for example, which of my accessories was slowing down my computer and by how much. I could also see which area were slowed and which were accelerated...

Thanks,

Rob

813. NOS kill file format?

Newsgroup: comp.sys.atari.st

As part of adding a Kill File feature to my new program POPwatch, I need to know the format of a NOS kill file. I thought it would make sense to use that format for POPwatch!

Does anyone know what the format is, and if possible could you supply me with an example?

TIA, Gary

I have plugged my bass right into the inputs and it works fine.

->The guitar Amp has a headphone Audio-out socket which you can listen to
->the guitar with a pair of headphones or should in theory be able to put
->a lead between the headphone socket and the Falcons Audio-in socket.

Its likely that the headphone out is too hot for the Falc's input. Over
here they sell little adapters with attenuation built-in.

->When I do this I get a loud buzzing sound and cannot make out what is
->played.

Is it a constant unvarying sound? Is it possible you are hearing your
guitar, but like with 100% distortion?

From: Neil Bradley <ABbradnd@pacom.osis.gov>
Message-ID: <33531016.80E@pacom.osis.gov>
Source record: 123951

Aloha from Pearl Harbor, Hi.

I was given a Mega ST2 and a Megafile 30 by a relative. I have not been able to get the Megafile 30 to boot. I have tried several versions of the AHDI controler programs to no avail. I have confirmed the cables are connected.

When the megafile is turned on, it shows the hard drive access light, but then nothing. Any Atari hard drive utilities do not recognize the drive.

Suggestions? Anyone out there want to try to fix this thing?

Neil Bradley

SY> When I do this I get a loud buzzing sound and cannot make out
SY> what is played.

Hi Simon,
I'd suspect one of three things:
1. You Falcon hasn't had the line-modification made, which means that it wants a microphone signal (very weak signal) and like if that's not enough, it sends out 9V phantom power to the supposed-to-be microphone, which can damage other equipment you try to connect to the input...
2. The signal is simply too "hot". If you have a headphone output, it's supposed to give power to a pair of speakers and not to a line - or even worse, a mic - input. It's simply more than the input can handle.
3. You have some sort of grounding problem. This can be difficult to solve, but start by checking your connections and cables.

If you need the line-level modifications, they follow after my sig.
Best regards,

Claes

A T A R I F A L C O N 0 3 0

Hardware modifications for getting standard line levels in/out (-10dB), instead of the original microphone in/headphone out. These modifications are described in your Cubase Audio handbook as well, but there is a slight change from that to get the true line levels.

All the components are surface mounted resistors and capacitors, so you should NOT do the modifications if you're not absolutely certain that you are able to do it.

REMOVE THE BASSBOOST
Change C58, C59 from 100pF to 1000pF

Change R123, R130 from 10kohm to 15kohm
Change R59, R68 from 100kohm to 4.7kohm
Change C95, C90 from 0.033uF to 1kohm resistor

LOWER THE HEADPHONE AMPLIFIER'S GAIN
Put a 10kohm resistor between pin 2 of U21 (@ R119) and AGND (@ R111).

LOWER THE INPUT AMPLIFICATION TO -10DB (and remove phantom power)
Remove R56, R57, R90, R92, C21, C81
Change R66, R87 from 100kohm to 1.8kohm
Put a 470pF capacitor in parallel with R67, R88
Put a 100pF capacitor in parallel with R66, R87

Everything's ready for testing.

Good luck and best regards

Well, to get around your backup problems, use a method that I found useful. I can't help you with your other problems, I'm sorry.

Use StZip to make a compacted archive of each of your partitions. If you do not have drive or syquest space that will hold this large single file, do it folder by folder. You can then use a program like Splitter or Schnipp to break up these large files into bits that will fit onto floppy discs.

At least then you will have a reliable backup of your stuff, and you can go about fixing your hard disc problems by re-formatting, repartitioning, etc. I'm thinking that maybe what you have encountered is some problem that Magic might be having with your FATs - but I'm afraid I can't be sure.

Best of luck,

>
>bye, Thomas

Hallo Thomas!

Wenn Du einen ATARI zum Formatieren der Disketten benutzt hast, der
mindestens TOS 1.04 hat (ab ca 1991) dann sind sie automatisch von
jedem DOS-PC lesbar.
Ab TOS 1.04 sind alle ATARI Disketten Dos-kompatibel.

Mit den ALL-Dateien von Cubase gibt es ueberhaupt keine
Schwierigkeiten. Alle ALL-Dateien koennen problemlos auf den
Plattformen MAC-PC und ATARI getauscht werden. Ich mache das staendig
ohne jede Probleme.

Schwierigkeiten kann es hoechstens geben, wenn Du auf einem System
Cubase-Score benutzt und auf einem anderen Cubasis. Aber auch damit
habe ich gute Erfahrungen gemacht.

Wenn trotzdem nichts laeuft, probiere den Austausch ueber Arrangements
*ARR und als letzte Moeglichkeit ueber midifiles *mid.

Wenn keine dieser Moeglichkeiten geht, kann nur Dein Computer defekt
oder falsch installiert sein.

Wie gesagt, ich arbeite mit CUBASE Score und Cubasis auf allen drei
Plattformen und kann alle Files munter tauschen und ueberall
abspielen.

Gruss

Gerd

John Perez wrote this to All about What hard drive for audio recording on Falcon?:
JP> I have a Seagate Barracuda 4 (ST15150N) that I was intending
JP> to use for audio recording (With Cubase Audio or Logic Audio)
JP> but it is too slow. The access time is 8ms, but the data
JP> transfer rate is hardly above 1400k/second. My old Quantum
JP> LPS540 exceeds 1800k/second.

Actually, you don't need more than about 1.2MB/s, so Idon't understand why it doesn't work. Theoretically you need even less than 1.2MB/s, but it seems this transfer rate is about the lowest you can work with in practise.
A higher transfer rate makes the system less sensitive to fragmentation than with a slower drive...
If you use HDDriver or SCSI-tools, you'll get the highest possible transfer rates. Personally I prefer HDDriver because it's continuosly updated and bug-fixed, while most other drivers are much less frequently updated.

JP> Can anyone recommend a fast high capacity SCSI hard disk?
JP> Apparently, the specs that most drives list are for
JP> Synchronous operation, and in that the Falcon SCSI is
JP> Asynchronous, I cannot determine what drives may be right for
JP> me. If you are using your Falcon for hard disk recording, and
JP> can achieve more than 4 tracks of audio playback, please let
JP> me know what you are using.

I currently use a Conner CFP2105 2.1GB disk for my audio recordings and it works fine. I've tried a Quantum Atlas 2GB, which worked fine. Previoulsy I've had a Conner CFP1060 1GB, which also worked nicely. I've tried out the Jaz, 1GB exchangable, which worked like clockwork. Even the Zip (100MB exchangable) works, but unfortunately it can't play more than 6 tracks at the same time in 48kHz (transfer rate around 1MB/s)...
I believe that most 1GB or larger modern HD's should be ok regarding the transfer rates, but another thing to be careful of is NOT to get a drive that makes calibrations. If it calibrates when you're trying to record or play, the "HD too slow" message will appear since it can't keep up the transfer during calibration.
As soon as I get my hands on larger disks I'll test them with CAF.
Oh, BTW Nowadays the "old" Conner disks are called Seagate Cayman, but they're still the same reliable Conner disks... Many of the other Seagate disks have a very annoying high frequency sound when running (not very desirable if you record with microphones in the same room as your computer is in), but the Conner disks are rather quiet.

Best regards,

Claes

Do you have a floppy drive icon? If not, you need to connect a floppy drive, and insert a floppy disk with a program on it (*.prg, *.app, *.tos, *.ttp) If you have a disk drive connected, and still don't see a drive icon, you've got a hardware problem. Chips loose or no good.

> * when I use the arrows on the keyboard, nothing happens.
Press ALT and use the arrows. This is a substitute method, for when/if your mouse quits. I use it when I'm checking out an ST, and don't want to bother hooking up a mouse. ALT-insert is equivalent to clicking the left mouse button, SHIFT-ALT-arrow moves the cursor one pixel at a time.

Hi all!

Just got myself in a rut here and wondering if anyone can help me out?

I bought another used MegaFile30 to go with my OLD MegaFile20

My problem!

Well I want to chain the MegaFile30 to my MegaFile20 but don't know the proper dip pin settings! They come factory with all the dips switches in the up position...

Does anyone know how to set these so I can Daisy Chain both drive to work with each other at the same time?

My MegaFile20 is the boot drive and I want to make the MegaFile30 the slave drive..

I don't know if this info will change anything but I thought I'd better include it as it might complicate things..

I have modified my MegaFile20 (BooT Drive) and added another drive inside the case. So My MegaFile20 has 2 drive in it 20megs + 47meg = 67megs

I don't think it will change anything but thought I'd better include this just incase!

Thanks
Johnny

This is slightly off-topic, but...

This may be related to the problem that I had getting my .rep
packets up to my provider. My problem was solved when my provider
noted that by unzipping the .rep, one got a .msg packet that his BBS
software, Wildcat v5, would accept. I now unzip the .rep's locally
and upload the resulting .msg.

We had a pc user who reported the same problem.

If you are going to try this, btw, do not rename the .msg to
something else - use xxxx.msg for the filename.

I wonder if the reason that Wildcat v5 won't accept the .rep is
because of those two null bytes at the end. I may try editing the
file.

S > buzzing sound and cannot make out what is played.

Sounds like bad cable (lead) to me. I would re-check with a cable that I knew was good. Wiggle the connections - sometimes they are not as good as they are supposed to be. I also advise you to check the obvious - plug in some headphones and see if that amplifier output works.

I got tripped up by this some months ago using a brand-new cable that was defective. I was sure that there was something wrong with a used STereo Replay that I had bought. I changed the cable and it worked.

You may also have what is known in the trade as a 'ground loop' - a signal common connection that describes a circle from the computer, through a cable to the guitar amp, and through the amplifier's ground connection at the wall socket back to the computer. Try plugging in the amplifier to the same power that your computer uses and see if there is a change in the buzz. The cure for this _may_ be to cut the ground connection at the computer end of the audio cable. It kind of depends on how the signal grounds are connected (or not connected) to the power (mains) ground in the amp and computer.

Hi

I sold my Falcon yesterday but:

I did harddisk recording with "Cubase Audio Falcon" and I used a Micropolis
AV Gold SCSI-Harddisk (2 GByte). I had no problems producing 8 Audio tracks
or even up to 16 audio tracks in the 16-track-mode (with data reduction).
My Falcon had a 32MHz Speeder (called "SKUNK", a German product) built in.

Thanks Goetz

Personally I am looking to run some HiSoft stuff that I have, Tempus II,
Batcher, Lattice C, but I was also considering buying First Word &
Calamus, or Calamus SL second hand. Before I jump for these I would have
liked to know about compatibility.

If a list exists somwhere I would be interested, but I would assume
other users might also like to know, if only to help plan purchases.
Guidance about the necessary configurations, ie. single running only,
might also be very useful.

Best regards

Don

60% on a DX4 would be rather unreasonable. I get around 60-70% on a DX33 running
OS/2, this machine also has very poor hardware (crap graphics card etc. It also has no
sound
card so no sound...amazingly)
Also I run pacifist on a DX2 66 and have speeds of around 115% but this machine has far
superior
hardware. Some more "intensive" games can slow it down to <100% which is a bit of a shame
but
it is such a great emulator it doesn't really matter.
BTW using the Scitech display doctor seemed to speed things up by around 5% on average, but
I don't know anything about this proggy except that it was needed to correct some of the
palette
problems in many games.
Cheerio.

```
Provided you did not format your disks in some weird 10 or 11 sector
format, you can make the Atari disks readable to PC Exchange on Mac (you
need to have it installed in order to read MS-DOS disks) if you change
the media byte (byte #21 counting from 0) in the boot sector (the first
sector on the disk, that is sector 1 of track 0 on side 0) to $f8
(single sided) or $f9 (double sided). Then you have to write a 80x86
jump command (either $ebxx or $e9xx, I usually choose $eb34) into the
first two bytes of the boot sector followed by a NOP instruction ($90).
The basic disk format (and all structures contained therein) of ST disks
are DOS compatible with the exception of the abovementioned bytes. If
you change them as described using a disk editor your disks will become
both ST and DOS compatible.

Stephan

>
> *Is the 1 Mb simm the only one that will work, or is it possible with,
> lets say 4Mb..?

You can use either 256Kb or 1Mb SIMMs (check out the Quick FAQ) 30pins,
120ns min.speed, either with or without parity. Use either 2 or 4 of
them, but don't mix 2 different SIMM types. The STE will handle: 512Kb,
1, 2 or 4Mb configs.

4Mb SIMMs will fit in, but the STE will still only recognize them as 1Mb
ones, still leaving you a total of only 4Mb anyway. Not much point.

>
> *If that&#65533;s so, how much memory is it possible to install..?

As I said, 4Mb with a standard STE.

You can always try using a special expansion board that allows you to use
more. There are several of these around. like, Aixit's or Marpet's, but
I'm not sure if there are STE versions.

Now, I have 2Mb installed, and I've never run out of memory yet.

None of that. From what I have understood, the machine that hosted the
cnam archives does not belong to them, and has been 'moved' by SUN (who
donated/lent it). Whether it will be back, or moved, or replaced, or
totally removed is not yet clear. In addition to that, the powers at be
at CNAM are on their easter vacations, so any high level decisions cannot
be taken yet.

The CNAM administrators are doing their best at the moment to bring back
the UTBM mirror with backup tapes, but they seem to be really too busy,
and maybe not sure enough, to come around posting announcements at this
time.

Keep your fingers crossed...

Yes it would seem the possible reasons for my DX4 getting better
results could be the scitech display doctor 5.3.. and a PCI Video card

Mine would seem to be running Pacifist perfectly, although thats
without sound :) sound on cuts the speed, and ATARI High 640x400 seems
to slow it down, but ATARI Med and ATARI Low seem perfect :)

To do proportional spacing the software really needs to know about it so you
will need a fairly decent WP. I just put up with 1st word+ and courier :(,
or imported it into PageStream.

> ->Does the DJ400 use the same Printer Control Language as the older

I am fairly sure that it does, it probably has a few extra commands too.

I have three versions of the PCL language on my web site:
http://apb25.emma.cam.ac.uk/hp/hp_codes.html

```
:
: Only in your dreams! The Falcon is stuck on 030 technology and the
: graphics/video subsystem is outdated! This Phoenex is most likely
: overpriced as the Hades is. PowerComputing's PowerCenter
: 150(ppc604/150mhz) for $1499! Price includes CDrom, ethernet

Ummmm...no shit shirlock!
But tell me where I can get into any kind 16 track recorder for less
than a grand I'll buy it! I'm in a Falcon 030 running CuBase Audio for
a grand total of $700. I don't need video...it runs in black and white...
but by dammit, it work...and it works well.

I'm getting really tired of Sinclap comparing systems that came out only
a few months ago, to those that came out in what? 1992?

: > Falcon's are niche computers...and you better get used to the idea
: > because when Apple closes down, and it will, Mac's will only be sold
: > as niche platforms and nothing else.

BTW...I have a Falcon, and Pentium Pro...I really wanted a power mac...
but was able to get into the two systems above for about half the money...
plus, I can get local support that the Mac doesn't offer (as compared to
the Pentium). Last time I shopped, the Mac dealers didn't seem to want
to sell me one very bad...the PC guys were kissing my butt, and dropping
the price another $100 every time I cocked an eyebrow. Also...the PC guys
could tell me what they were selling me, how it worked, and were able to
advise on what worked well and what didn't. The apple sales people just
looked at me like "I was stupid" when I asked them if the system would run
Cubase VST, or what speed processor different models had...etc. When I
asked for Mac brochures, they said they didn't have any...and tried to
sell me a copy of Mac World. The PC guys gave me enough literature on
each system they sold to read for a month.

Apple has a great product...most likely the "SUPERIOR" platform...problem
is...they don't care wether they sell them or not. The few dealers they
have in my area are clueless, and have to tools become educated by.

As much as I hate to admit it...
Apple has a lot to learn from Intel and Microsoft when it comes to
selling computers. 1...don't alinate your dealers, this is what killed
Atari! 2...don't alinate potential coustomers.

>
> Does anyone know how to set these so I can Daisy Chain both drive to work
> with each other at the same time?

Take the top off your Megafile 30, change the DIP switch settings to something other than the Megafile 20, they should be visible through a hole in the top centre on the metal screening.

But remember:

AHDI may not recognise the MF30 if its ID is not numbered directly after the MF20. So if your MF20 is ACSI unit 0, then you should make the MF30 unit 1. Try moving the far right DIP switch down in the MF30.

Reboot and it'll all work perfectly. (Yeah, right...)

Chris.

Hmmm...
I'd thought I bought it while at College, and I was in school from 1987
- 1990.
But perhaps I bought it just after graduation, when I started working.
So that
would put it very definately in 1990.
I'd thought the STe was around a lot longer than that, well, maybe a
year or
two longer?! :^)

this may seem silly, but have you tried just renaming the *.app to
*.prg?
when it is in the Auto folder?
often works for me - like experimenting with renaming *.acc to *.prg -
some accessoiries will run as programs!

859. DOS Hard Disk Partitions on a Falcon?

Newsgroup: comp.sys.atari.st
Date: 1997-04-14 00:00:00 UTC
From: bjr@Edison.EbiCom.Net
Message-ID: <5ithmu$rpo@einstein.ebicom.net>
Source record: 124016

Aloha,
I have HD Driver...
I've noticed that when placing a DOS formatted EZ 135 disk in the drive,
I'm able to read the files with no problems (or so it seems...at least
I could access a pile of HTML files I made on the PC with CAB).
The question I have is:
Can I write to these disks without destroying them?
Is it absolutely necessary to install BIGDOS to use DOS formatted disks?
I'm trying to find a way to interchange my CuBase Audio files across
platforms easily. I "tried" to install BigDos, but it doesn't work with
CuBase Audio (that is if I did it right).
Finally...where can I upgrade my version of HD Driver, and what is
the latest version?

For sale:
Syquest 44MB external SCSI drive w/ 9 disks. This is the standard for
transporting files to service bureaus, or for backups, and the drive is
very fast.
The cartriges are formatted for Mac but can quickly be reformatted for IBM
or Atari or any other computer that speaks SCSI.
The disks sell new for about $75 each. I have nine of them.
I am asking $350 for the whole bunch INCLUDING the drive in external case.
email japolis@mindspring.com or call Jeff at 303-473-0511

From: rick_ellis@vnet.ibm.com
Message-ID: <5ivn9stii1@zen.hursley.ibm.com>
Source record: 123824

I'm afraid I can't really answer your question. It just happens to run at that speed. My DX2
66 seems to be pretty fast but is not too remarkable in the hardware department i.e 16MB ram
1.7GB HD Half descent graphics card etc... I did get the Scitech Display doctor to work and that seemed to make quite a bit of difference. The drivers for my card were 18 months old so
I guess they were a bit dated and the display doctor has just given the system a bit of a boost.
Apart from that I didn't do anything remarkable to the system that no-one else does i.e. optimise
memory etc....
This old DX 33 is running OS/2, which, despite all the slagging off OS/2 Warp gets, is a pretty
speedy OS to run under.
Around 60% atari speed is obtainable, but as I said It does slow down with more intensive gaming.
Personally the speed of this system does surprise even me when it comes to games. For example
Duke Nukem 3D sails along nicely and most other games play just as well. OS/2 does have some
memory configuration options which certainly help such as >640K base memory, but again I don't
see why other people should have speed problems with PaCifiST, unless of course they run under
good old Windows 95..ho ho ho.
Sorry I can't be more specific, or of more help.

Rick.

869. Professional and Affordable Web Design and Hosting

Newsgroup: comp.sys.atari.st
Date: 1997-04-15 00:00:00 UTC
From: Kris Thompson <thomp132@expressionsmedia.com>
Message-ID: <5ivovu$9h8$4834@msunews.cl.msu.edu>
Source record: 123826

Welcome to Expressions Multimedia...

We would like to extend an invitation to visit us at http://www.expressionsmedia.com.

We specialize in providing professional yet inexpensive web page designs and web site hosting.

Please be forwarned, many of our sites include ActiveX and Java and are optimized for Internet
Explorer 3.0, so they many not look right in some browsers.

Also, check out our newest site for the Blue Cardinal Motorsport racing team, they can be found
at http://www.expressionsmedia.com/bluecard.

I would like to thank you for your time,

Kris Thompson
thomp132@expressionsmedia.com

I have heard the problem can be solved by turning the mouse speeder off.
Do this in the NVDI configuration CPX.

>Suggestions? Anyone out there want to try to fix this thing?

Silly question but are you turning the MegaFile on first? Also, its easy
to have the hard drive cable hooked up to the wrong place on the back of
the MegaFile, you might want to switch it just to see-it won't hurt...

You might want to get in touch with John Perez (I believe thats his name)
He is a big Atari supporter in the Hawaii area... Good luck!

875. POPwatch - A new POP3 mail tool

Newsgroup: comp.sys.atari.st
Date: 1997-04-15 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <73265712_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 123832
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

I just thought I'd announce the release of my latest program "POPwatch".

It's a POP3 mailbox tool that works with STiK.

It allows you to see what mail is waiting, view part of an email without downloading the whole thing, delete them (manually or via a Kill File), and, of course, download them into your existing email client (Oasis2 and NEWSie at present). It makes full use of Demon Internet's special POP3 commands if used with Demon, but works on Non-Demon accounts too!!

It is *not* an email client. It is intended to work in conjunction with your existing email program, but allows you *much more* flexibility in what you actually download than these programs currently provide.

It is only of use to you if you have a POP3 mailbox and use STiK.

It's still in fairly early beta stages, but is fully functional. Although of course there may be a few bugs, and I'm always adding new features. So bare with me!!

Anyway, if it's of interest to you, you can get it from my website (below). Please drop me an email with any praise, suggestions, criticisms etc.

Regards,

Gary

> This old DX 33 is running OS/2, which, despite all the slagging off OS/2 Warp gets, is a pretty
> speedy OS to run under.

Runnin OS/2 here as well (version 4.0), decent stuff.

> Around 60% atari speed is obtainable, but as I said It does slow down with more intensive gaming.
> Personally the speed of this system does surprise even me when it comes to games. For example

Hmmm, my DX120 gets to 60% as well......I guess my hardware timing
problems actually DO have impact
on the machine...although tweaking is not my strongest point, I'll give
it another go when I come
back from my holiday (in about 6 weeks).

> Duke Nukem 3D sails along nicely and most other games play just as well. OS/2 does have some
> memory configuration options which certainly help such as >640K base memory, but again I don't
> see why other people should have speed problems with PaCifiST, unless of course they run under
> good old Windows 95..ho ho ho.

Well, I run OS/2, and Pacifist, but somehow I do not get more than 60%
speed. Having said that,
I know that my machine is a slow one (all timing is corrupt because of
heavy component-swapping
through the years). My guess is that platform-dependency is not an issue
here, as Pacifist seems
a real clean programmed DOS emulator.

You might want to try keys from a PC keyboard if you have one around.
Many of them are interchangeable (too similar to notice at least).

I do not think he is still developing the software, but he is selling
the manual for 10$ (which also registers the program)
His snail mail address sems to work.
btw, how did the time/clock setting problem pan out on your Mega?
mine seems to be keeping time OK
also-not too many questions on the redacteur list these days, eh?
maybe because there are no problems with it! :^)

CNAM IS OUT OF ORDER
****
The CNAM (ftp) is out of work because some people (who ?) have
taken away (legally) the unix computer which made run the site ...
but where ?
The CNAM site will be moved to another place (they say they hope it
will ...) but where and when ? I hope they will take it as soon as
possible to make it survive !
Then don't try to connect to it now ... it even don't exist anymore.

>
> *Is the 1 Mb simm the only one that will work, or is it possible with,
> lets say 4Mb..?
>

265K or 1Mb SIMMs, either two or four SIMMs.

Available combinations are: 520K 2*256K
1 Mb 4*256K
2 Mb 2*1Mb
2.5 Mb 2*1Mb + 2*256K (with a software
patch that may or may not work
with the sofware you use.)
4 Mb 4*1Mb

> *If that�s so, how much memory is it possible to install..?

4*1Mb = 4 Meg.

It's probably not exactly what you mean but with the editor Qed
3.97 and Cab in conjunction with Olga (Object Linking for GEM
Apllications) you have a Near-WYSIWYG-HTML-Editor.
The only drawnback of this is that one must use a multitasking system.
I use this things all the way with N.AES/Thing1.09 with no problem
whatsoever.
I create/modify a HTML document with QED and after saving the text,
CAB loads immediately the page I just have saved.

Hi, your problem is quite easy.
You need to lower the input of your falcon.
I mean: the input of a falcon(standard) has been made for high
impedance devices. (mainly useable to plug a mic directly,
electrically-speaking)
The output for a headphone is too much for the input of a standard
falcon.
You need either , plug your guitar directly into the falcon, or get
the attenuators.
well it is a little more complicated than that, but in few words
that's it . :) bye.

You're too write! :^)
He didn't say what software he was using though, so
"hey guy! what software are you using!"
if it's early stuff, you probably would need a specific driver or
drivers,
otherwise GDOS should do it.
Can you make drivers for Pagestream? For Calamus and Marcel you can.

> Suggestions? Anyone out there want to try to fix this thing?
MegaFiles are prone to stiction. Mine recently permanantly quit, after two
years of intermittent sticking. One thing which worked for a while is;
pick up the MF 30, then give it a sharp twist, as if you're trying to
shuffle apizza inside a box. Sometimes that will unstick it for a while.
If it does unstick, leave it on forever (if that's at all practical). When
mine finally kaffed, I tried replacing it with another RLL drive I'd
purchased for just that purpose. I haven't gotten it to work yet.
Good luck!

I assume you are talking about a mailkill file. It is simply an email
address on each new line, any email from said addresses is bounced.
POP3 is quite different to SMTP, with SMTP you can only reject on sender
& recipitent. With POP3 you have all the extra stuff which is more
likely to implicate mail as junk mail. Thinks like AND, OR & NOT rules
would be nice too.

There are 2 possible causes that I can think of:
1, You do indeed have a sticky key, you may need to take the machine and keyboard apart and see if there is something stuck in there,
2, You have ajoystick plugged in with autofire switched on or in the wrong mode.

Interesting. I better tell my 2.05 MegaSTe to stop reading and writing
1.44MB floppy disks then! :^)
With a little help from my good buddy Hallvard, and popping the
DIP switch over(#7) I was using a Sony MFP520 LM-1 1.44MB disk drive.
Is that info you have on TOS 2.05, 3.01 & 3.05 official Atari info?
Maybe it was meant for those TOS's because they didn't have a capable
WD chip in them? Mine is a WD1772-02-02 which seems to work fine?!

In fact, Sun is just moving the computer with the cnam.fr ftp files to
another place(physically). First problem is nobody know where it is
going.
Other problem: will the cnam.fr ftp still exist after moving?

The previous message about mirror is explanation of disapearance of
the french mirror site: they forgot to stop automatic mirror procedure
and then the mirror procedure just copy ... nothing... removing old
files.

The only mirror available is ftp://ftp.gui.uva.es/pub/atari
(very slow).

PLEASE DON'T EMAIL TO SUN.
****
If necessary, cure@cnam.fr will leave a message in atari newsgroups
with instructions.

Don't ask me more information, I don't know more.

Date: 1997-04-15 00:00:00 UTC
From: News@pwomar.demon.co.uk
Message-ID: <19970415191833769 94@pwomar.demon.co.uk>
Source record: 123860

I'm using ST Zip and I need to compress a directory of folders into zip files ie I have a directory of 50 folders named 1,2,3 etc and I need to get them compressed into 1.zip, 2.zip etc Is there any way to do this? I've tried using the command line but I cant find the right combination of commands. If this isn't possible on the Atari then I also have access to a PC & Mac, I know that stuffit on the macca do this but I'd really like them to be in zip (or even .lzh) format.

Thanks for any help.

Sounds like the level is too high, you need an attenuator. You may be
able to get one ready made, or modify the cable to include attenuating
resistors.

Hmm.. Isn't the floppy drive needed, working or not?
try putting the drive back in, or alternatively, putting in any other
3.5" floppy drive. Make sure you have the grounding metal support post
into the hole on the floppy disk drive when you reinstall it. It's
usually
on the cabling side of the floppy, in the corner facing away from the
keyboard. Are you getting a power light in the bottom left of
the keyboard, and a light at the top right of the keyboard (for
attempted
floppy disk access)?
can't think of what else. If I do I'll let you know.

I believe that this is the case. The Falcon's audio input is microphone
level, and headphone or line level will overload it. You will need an
attentuator of some sort.

Last I heard they were going to do PageStream for windows. They pulled out
of the atari market ages ago (although they remained in the amiga market).
They "rereleased" a special edition of PS, but IIRC nothing was changed,
just a new name.

I didn't know that an emulator instantly gave you those specs. I think that
stems from your original PC hardware. Connect that to your ST if storage
media is what you need. TOS switches exist as well. Your comparison is
anything but fair.

Woo, almost like a Falcon, minus the graphics and sound, eh?

The Falcon can be upgraded to 040, don't know about 060. Likewise with the
graphics. And don't forget that the processor is backed up by coprocessors like
the Blitter and DSP.
Centek say that the Phoenix will be cheaper than the Hades.

>> HAHAHAHA!!!! ROFLOL!!!!

>Care to provide that Macs are more expensive? Please list the
>equevelant Mac hardware to the Falcon...

Why would you need that hardware if you're into music? Cubasis certainly doesn't
need 24-bit graphics. It needs MIDI. Other programs need sound ports, which the
Falcon also has.

>> Falcon's are niche computers...and you better get used to the idea

915. Re^2: falcon SCSI hardware fix

Newsgroup: comp.sys.atari.st
Date: 1997-04-15 00:00:00 UTC
From: claes.holmerup@p5.dada.ct.se
Message-ID: <ftn_2.200.136.5$fidonet.org_b9edeacf_Claes.Holmerup@p5.dada.ct.se>
Source record: 123872

Ken Macdonald wrote this to Claes Holmerup about falcon SCSI hardware fix:
KM> This is the info I have for "Sound on(in?) sound
KM> It is the 'Bass boost mod'
KM> -change C58 and C59 from 100pF to 1000pF
KM> -change R123 and R130 from 10K to 15K
KM> -change R59 and R68 from 100K to 4.7K
KM> -change C95 and C90 from 0.033yF to 1K resistors
KM> Is this pretty much it for the bass boost mod?

Hi Ken,
It is the same bassboost modification that I have.
Here comes all of the modifications for getting line levels:

A T A R I F A L C O N 0 3 0

Hardware modifications for getting standard line levels in/out (-10dB), instead
of the original microphone in/headphone out. These
modifications are described in your Cubase Audio handbook as well, but there is
a slight change from that to get the true line levels.

All the components are surface mounted resistors and capacitors, so you should
NOT do the modifications if you're not absolutely certain that you are able to
do it.

REMOVE THE BASSBOOST
Change C58, C59 from 100pF to 1000pF
Change R123, R130 from 10kohm to 15kohm
Change R59, R68 from 100kohm to 4.7kohm
Change C95, C90 from 0.033uF to 1kohm resistor

LOWER THE HEADPHONE AMPLIFIER'S GAIN
Put a 10kohm resistor between pin 2 of U21 (@ R119) and AGND (@ R111).

LOWER THE INPUT AMPLIFICATION TO -10DB (and remove phantom power)
Remove R56, R57, R90, R92, C21, C81
Change R66, R87 from 100kohm to 1.8kohm
Put a 470pF capacitor in parallel with R67, R88
Put a 100pF capacitor in parallel with R66, R87

Everything's ready for testing.

Good luck and best regards,

Claes

```
The Swedish Atari Club (SAK) 970104
and NoCrew proudly present...

-------------------------------------------
T H E N O R D I C A T A R I S H O W '97
-------------------------------------------

Dear Atari friends,

It's once again time for the Nordic Atari Show, the annual get together
which has rapidly become a fixture for all Atari users.

Third time lucky, so they say, and as we are arrange the show for the
third straight year we hope to fulfill everyone's expectations and that
this will result in the best possible atmosphere. We've gotten a certain
amount of criticism, both positive and negative, from those who have
attended the shows in '95 and '96. We've taken heed of the suggestions
made and we're once again off and running!

- WHEN AND WHERE?

This year the show will begin on Friday, June 13 and end on Sunday,
June 15. This is the weekend following the beginning of the summer school
holidays as well as the weekend prior to the Swedish Midsummer
celebrations. We'll open at 1 p.m. on the Friday and close at 6 p.m. on
the Sunday.

The show will take place in Gothenburg, just has it has in previous
years. The exact venue has not yet been established. We're still looking
for the cheapest location. The likeliest possibility is Kortedala
gymnasium, where it was held last year or some other venue, nearby.

- WHAT ACTIVITIES WILL BE HELD?

* There will be an Exhibition Hall will dealers, distributors, ShareWare
programmers and a host of other interesting personalities. The usual
meeting place for all those not wanting to "hack". This is also where
the Swedish Atari Club will be found supplying information, sale of
PD-disks, the club magazine's TT, the BBS, etc. We'll also have an area
reserved for a swap meet where you can buy, swap or sell single copies
of Atari related material and a "soldering corner" for those of you
wishing simple repairs done.

* A "Hacker Hall" where demo and other programmers can gather for
competitions and swap demos and all kinds of code. NoCrew is the
Swedish demo group who will see to it that everybody takes part and
enjoys themselves. Those of you hungry after rewards in the form of
```

prizes will be well taken care of. Exactly WHAT prizes these will be hasn't been established, as yet.

* Seminars with a number of well-informed lecturers. Last years seminars were very much appreciated, something of which we naturally have taken notice. The seminars will cover a variety of subjects (i.e. MIDI ercording/editing, DTP, hardware, programming) where the above mentioned "well-informed lecturers" will demonstrate his subject directly on a computer in order to provide the audience with practical examples. We'll also hold the seminars on different days and at varying times so that you won't have to miss the chance if you don't attend on a particular day.

* Minor competitions such as "A-Z on the Keyboard" (a much appreciated contest last year), hard disk throwing (this year we WILL succeed!), network games, juggling, etc. Everything depends on our finding volunteers to act as game leaders and judges. There will be prizes for the winners.

* A refreshment stand will sell non-alcoholic drinks, sweets, chips, etc. We may be able to arrange quantity discounts at the local pizzeria as well as other bonuses.

- WHAT WILL IT COST?

If you intend to attend all three days, you cheapest solution is the Three Day Pass otherwise a Single Entry ticket will do:

* Three Day Pass ... SEK 100:- (about UKP 8.50)
* Single Entry ..... SEK 50:-

These prices include full access to all the activities being held during NAS97.

- WHY SHOULD I ATTEND NAS?

The answer is simple: because you care about the TOS platform. We Atari owners are becoming fewer and fewer and a get-together like NAS is a simple way of seeing what's happening in the Atari world (no, it's not dead!) and meeting like-minded Atarians and hearing what kind of tips, ideas and visions they have.

- HOW CAN I FIND OUT MORE?

Information will be distributed regularly in the same way as this text file. In addition, we have a number of other sources of information where you can find out more about the show depending on your own resources.

* Our mailing list (E-mail). This will provide the very latest information to those on the list. To have yourself put on the list you MUST have an E-mail address. Send us a message on "nas-users-request@tripnet.se" with "subscribe nas-users" in the body of the text. Don't forget to include your E-mail address.

* Our home page on the World Wide Web. This has been in existence since last year and we'll try to update it as often as the information for the mailing list. The home page will contain more detailed information concerning times, schedule of events, directions on how to get there, competitions and housing.

The address is "www.tripnet..se/sak/nas".

* STraight BBS. This is the Swedish Atari Club's home BBS. Information concerning NAS will be included in the SAK menu. You can also use this BBS to ask any questions you may have. The telephone number is: +46 31-336 39 73.

* Our club magazine, "AtariMagasinet", will contain adverts with more detailed information concerning NAS97 in issues 1/97 and 2/97. This is the largest mailshot we will send to our (SAK's) members.

* Our show co-ordinator is Rolf Johansson. He's supposed to know everyting there is to know about NAS97. If you have questions to which you've been unable to get answers anywhere else you can send him a message at "rojo@tripnet.se" and you'll get your answers. If you wish to get into direct contact with him, he can be reached on his mobile 'phone on +46 70-669 52 35.

WE'RE LOOKING FORWARD TO SEEING YOU AT THE NORDIC ATARI SHOW 1997!

I just purchased (and have absolutely no working knowledge of) an Atari STf 1040 with a known faulty disk drive. I've taken out the floppy drive and tried to power-up the system. The system comes up just fine (I see the menu options at top with the mouse pointer in the middle of the screen) however right after I powered up the computer it makes a very fast constant beeping sound (as a PC does when the keyboard is messed up) and doesn't stop beeping. No keys on the keyboard seem to do anything and the mouse is completely unresponsive. I assumed from the FAQ that I can boot up without a floppy but I don't understand why it's sitting there beeping at me. Please post help here or send mail to jdbowen@mindspring.com

Thanks!

Hoooooo,

Gary, I made a VERY BIG MISTAKE while sending this mail to you and to
the comp.sys ... I'm now very ashamed ... Sorry, I must apologize,
but I was thinking for a moment you were one of the Oasis authors, I
must apologize again, and above all, yes I was VERY WRONG by sending
this article to you as a reply ...
This article is definitely not for you ... it is only addressed to
these two bad guys who never answered and only cashed my money a few
months ago :

Dave Levi and Phil Yeadon

Gary, will you accept one day my apologize ?
Excuses to everyone who read this article ...

The only people who are concerned about the early article are the two
conceptors of Oasis and certainly not Gary Priest.

I'm so sorry.

Jo

I have a DX4-100, and get just around that, and I'm on a VLB motherboard. Tony and I were talking about this earlier, and he has this PCI board, and video card, which I believe contributes to his ability to run Pacifist at full speed. Tell us how you got it to run at full speed on your system.

It's a standing joke at my house that my entire system is what I call the Mutant 486 From Hell. Why? It's in a full-size tower case, all 5.25 bays, one 3.5 bay full, *TWO* power supplies and the usual compliments of video, I/O, sound, etc, cards, including two SCSI drives totalling 1.5 gigs.

The only problem I have is that the Scitech drivers seem to refuse to install on my system, for some reason. I even went so far as to go to the website, and look for the DOS version, thinking they had something different. No go. I have to actually *CALL* their BBS.

I would stick up for Netscape and CAB here. According to the O'Reilly Associates book "HTML: The Definitive Guide", empty cells in tables with borders are not embossed but simply left blank, and you have to place some minimal amount of content in your cell to give it incised borders - presumably Netscape and CAB apply the same rule to coloured cells. In my experience, a space does not count as "content" when it comes to cells. O'Reilly suggest "
", but some browsers appear to behave oddly when a table cell ends with a line break. I would recommend you use a 1x1 transparent GIF instead.

Brian Roland wrote:

> Can I write to these disks without destroying them?
> Is it absolutely necessary to install BIGDOS to use DOS formatted disks?

It is absolutely necessary to use either Big-DOS or MagiC 5 if your DOS
partitions are larger than 32 MByte. Otherwise you are going to trash
your data. With Big-DOS or MagiC 5 and HDDRIVER DOS compatible
partitions up to 2 GByte are supported. Note that for the Falcon Big-DOS
8 doesn't work well, use Big-DOS 6 on the Falcon.

> Finally...where can I upgrade my version of HD Driver, and what is the latest version?

The latest version is 6.2, demo available on
acp5.chemie.uni-kl.de/pub/atari. You get an upgrade from the distributor
you got your HDDRIVER from or from System Solutions.

It looks to me more like a faulty keyboard than a faulty drive, or maybe
both.

Have you tried booting without the mouse connected? Maybe the mouse is
screwing up the keyboard chip... You can still simulate the mouse with
Alt+cursor keys.

If it really is the keyboard, then you will have to get a new one.

If the floppy drive is really also dead, it may be cheaper to just dump
that ST and get a new one.

Do any 'floppy' icons appear on the desktop with the floppy drive
connected ? have you tried booting with a plain PC formatted DD 720Kb
disk.

Hello.

I have a friend who's trying to set up his Atari ST520 for use as an internet access point (ie with a modem and software).

Please can someone help him with the following questions:

1. What modem/comms software should he use, and where can he get it?

2. What Atari publications are available in the UK, and where can he get them?

Please email answers direct to me - no doubt most of the readers on this groupd are sick of seeing the answers.

Thanks for your help...

Geraint

929. AD: Atari ST & some other bits for Sale

Newsgroup: comp.sys.atari.st
Date: 1997-04-15 00:00:00 UTC
From: Ian M Cass <icass@netcomuk.co.uk>
Message-ID: <3353A245.A7@netcomuk.co.uk>
Source record: 123970

Atari 520 ST fitted with 4Mb RAM (60ns SIMMS if that makes any
difference) & TOS 1.04 & D/S internal floppy drive.

C/W 1 D/S external floppy drive, 1 sound sampler cartridge, manuals &
some software.

It's been sitting in the loft for a while - I've been running it all week
& still seems OK. Don't know what these things are worth now - make me an
offer.

BTW Buyer collects - I live in Rochester, Kent, England.

Please email me if you're interested in anything.

ALSO (probably not much use to Atari owners):

Conner CP2064 65Mb 2.5" IDE drive for notebook PC £15
Quantum 127AT 120Mn 2.5" IDE drive for notebook PC £20
486DX2 processor only £5
Pentium 60Mhz processor only £10
486DX33 processor only £5
vga colour monitor £40
ega colour monitor £20
PCI video card - trident 9440AGi £25

Sounds like a keyboard problem.

I used to get this when I forgot to re-connect the keyboard after taking
my STFM apart. If the connections are ok, you may have a faulty keyboard
controller or UART.

You can get some documents on the ST internals on umich archive (like the
tech manual) which will give you an idea of the internal sub systems.

I am not aware of any standard ST fault clearing guide available on the net.

If possible, get hold of a working keyboard to try out.

There is also a diagnostic cartridge (made by Atari) that can help a lot,
but I don't believe it is easy to find now. Somebody may be able to lend
you one.

Hi :)......You are not the first to report missing the original
posting,
Don't know how it works for anyone else, but I can post to any
newsgroups and within seconds it is there for viewing, I simply
presume that anyone else who has access to the same group can see the
same thing, as it turns out, it doesn't always get everywhere :)
Sometimes post go missing on there way to different news feeds, sorry
about that :)

I am very pleased you and others saw it this time, I was beginning to
wonder, (paranoia r us) <smile>

Please just send me all your BBS details, these can then be listed in
the diskzine and on the ST+ webpage (unless I am asked not to of
course)

We are awaiting the Diskzine to get "fanned" if thats the correct
terminology?, or it is available for direct download as soon as
released from its very own dedicated ST+ Web page :) url in sig

Thanks for your support....my week keeps getting better :)

Cheers !ynoT (ATARI Programmer)

You are supposed to have 2 drives on the desktop, B is like a "pseudo drive", if you want to copy something between 2 floppies for example you can drag to the B icon and it will prompt you to insert disk B. Try again without the keyboard plugged in, if that doesn't work then you need an expert.

I had exactly the same broblem with Yahoo and AltaVista. The problem
is cab.ovl v1.21. Get the 1.18 version and you will have no problem.
Its very stable and faster. At least on my mashine..

George

I don't have that problem. My local Best Buy has a huge selection of
Mac software.

Than again, I flip through the monthly catalogs from MacWareHouse,
MacConnection, MacZone, MacMall, ClubMac and CDW for software. I save
at least 30%, no sales tax and only $3 over night shipping..

Nice try!

What Mac was that? Have you told this to PowerComputing who had their
highest unit sales ever in March?

For the price of that Pentium 166, A PowerMac 6500/225, utilizing a
225mhz processor with the integrated ATI Ride III video card and
subwoofer just destroys that Poor excuse phony Pentium 166 box!

Nice try?

Two Floppy icons is normal.

If your keyboard is dead, how about checking the voltages on the
chips,should be 5 volts DC on the power pins. If not, you will have to
follow this back into the ST.

Also check the wires for broken connections.

If all appears ok, your quickest route is to substitute a working keyboard.

If the substitute works, buy a replacement from somebody like Best Electronics.

It definately sounds like a keyboard problem.
Open it up and check the connections.
press down all the chips you can see while you are at it.
(some may have worked loose)
try and get a hold of another ST keyboard that works to test it.
good luck.bonne chance

Where do I get a powersupply for a Megafile 30?
I exchanged all semiconductors that were damaged, but the transformator
must also be broken. Is there a possibility to get that exchanged?
Thanks a lot for helping!

Fine, if it works..But there are others who need internet capabilities
and their current Falcon's don't cut it!

Does anybody know what the exact attenuator is to get...I seem to recall
somebody actually posting a RadioShack part number...

I messed around using headphone outputs from my stereo, and they sounded like
shit on the falcon. Can anybody tell me what I need to do to be able to
sample using headphone (or line) output???

Much TIA,

950. Probs with Papyrus V4 - help, please!

Newsgroup: comp.sys.atari.st
Date: 1997-04-16 00:00:00 UTC
From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <hFN5Fsi.johnhechtman@delphi.com>
Source record: 123791

Hi All,
.
I just got the V4 upgrade for Papyrus from Oregon Research and am for the most part quite happy with it. However I've found an odd buglet that I need your help with.
.
It seems that when I try to use the Monsal font with my HP560C color printer, it will only print the _outline_ of each letter and leave the center unfilled. Even odder, it shows some of the font sizes as outlines in the Font Layout dialogue box.
.
This problem does _not_ occur when I use the older version of Papyrus, even though I'm using the same printer and system setup. In both cases, I'm running NVDI 3.02 on a 14 meg/ram Falcon with TOS 4.04
.
In both cases I'm using the HP550C printer driver supplied with Papyrus and according to my HP manual, that driver should support all the printers features.
.
I wouldn't care too much, except that the Monsal font is one of my favorites, it's very graceful and I use it for a variety of documents. What I can't figure out is why the Font Layout box should show only some sizes as outlines and not others - and why the printout is different from the screen display.
.
Does anyone have a current email address for the parent company for Papyrus: ROM Software? I found valid addresses for Oregon Research, it's ORRES@TELEPORT.COM, and HiSoft, it's SUPPORT@HISOFT.CO.UK.
.
In an attempt to get the most help with the least effort, (grin), this post will go to Oregon Research, ROM Software and HiSoft, as well as Usenet and Delphi's Atari SIG (I'm on Delphi). Of course, that's assuming that I can find valid email addresses...
.
I bet you'd like to know why the periods between the paragraphs, wouldn't you? It's 'cause Delphi's Internet software removes all blank lines - which would turn this into one large, unreadable paragraph! Another bug (sigh).
.
Any help you can give me will be _greatly_ appreciated!
.
Regards,
.
John Hechtman

> or what?

No, I have an STm which doesn't say so, but it does have the modulator
output. BTW, you have to run this into a box which translates it into RF
coaxial or two screws, so the tv or VCR relates to it as channel 3 or 4
input. It's also subject to fuzziness and interference, I think from the
computer itself.

"Sinclap," I am not surprised that you haven't responded to my post. I believe we have reached the point in the discussion where you have been proven wrong with clear numbers and clear logic, and all you can do now is either ignore my post or admit that you are incorrect.

I have a dream. One day, you'll prove me wrong about you and actually ADMIT you don't know a damn thing about audio/MIDI on computers. You'll actually come out as a respectful human being and state, for all to see, "I don't know how the Falcon compares to the Mac as an audio/MIDI platform, since I've never used either to create music or edit audio." In this dream, you will become educated to the ways of audio, and will have a revelation. At this point, you will agree "Yes, the Falcon is a good MIDI/Digital audio platform.. no, not as feature filled as the top Mac or PC solutions, and there aren't as many pretty graphics, but it is as well integrated as the top Mac and PC solutions, and costs less money for a pro system." Of course, you will still stay a Mac user, but you will realize that there ARE merits to other platforms other then the ones created by your heros Jobs and Wozniak.

Alas, it's only a dream..

I would never presume to argue with you about, say, whether an Atari, Mac, PC, or SGI machine is better for 3d animation... because I've NEVER DONE IT. Would you criticize a politician for their views on something without researching it? I think not. So, prove me wrong and display that you are a real person.. admit you are incorrect about this.

-Mark

Yes, the have released a Mac version and expect to ship a WIndows
version in late 97/98 timeframe last I e-mailed them.
They have a web page, I forget the exact address, but do a search
on Pagestream and Amiga seems to be where they have the biggest links
to them. I was asking them if they would release some doc's to go
along with there source code for printer drivers they had released.
They said they didn't even have a ST still with a hard drive attached
to it.. Sad to see a once strong ST supporter totally dumping a
platform.. I recall the waiting for PS 2.2 to be released as a upgrade
from 1.82, sure was nice.. Too bad Atari didn't sell a few more
Falcon's to get yet another upgrade done.

: Just wondering -- does anyone know if SoftLogik (the creators of
: PageStream) is still in business? Are they making software for Windows or
: the Mac? Or are they out of business?

They are still in business. They still support and sell PageStream 2.2
for the Atari and Amiga and have a version 3.1 for the Amiga which they
have also proted over to the Mac. They don't mention a Windows port
anymore at their web site (http://www.softlogik.com/) so I think that may
be vapoware. They have some other products as well, including the most
popular Amiga Word Processor, and Amiga Paint Program, a personal
database, and a Font Editor.

They have ported their personal information manager from Amiga to Windows.

PageStream is a great product, even in 2.2. I wich they would have ported
3.x over to Atari, but they never will. Wordworth is very similar to
Papyrus, so we don't really need that product, and paint programs and
personal databases and PIMs are a dime a dozen too. But that is a nice
DTP program.

Source record: 123879

I've had a 4 Meg STE for the last five years, and I've finally come to the conclusion that I need to upgrade my current Atari to either a Falcon, PC, or Mac. I've been pretty dedicated to the Atari platform for a few years now, and I'm not too keen on changing platform - especially considering all the costs of starting from scratch with no software. I've been hearing some rumours about the Medusa, Eagle, Falcon Mark X etc. and was wondering if anyone could give me any information and specs for these machines as well as their cost and availability.

All comments appreciated, Alan.

>

I've CAB 1.10 and 1.50 both work (I found 1.50 works better as a .PRG vs
.APP). But no matter how often I try to go to altavista as listed above.

It starts to load the page (I see the initial modem send) then it comes
back and says bytes receive (0 ...) and it just sits there nothing ever
comes across. Sometimes I then get the overflow message. Could I have a
corrupt file in the cache? I used the clear functions within CAB,
should I maybe instead delete the files manually?

Could you maybe send me an attached file of you .ovl file? (I know this
is a pain) maybe your configurations. I'm just wondering if I set aside
more memory or something if it will work.

I agree with you complete that AltaVista is one of the best sites to hit
that's why it's such a pain I can not connect to it. HELP.

Incase anyone is interested:

I'm using a TT with a mono-monitor. 4M TT RAM, 2M ST RAM. I'm running
NVDI 3.xx. I'm under the Atari OS (no Neodesk or Geneva or anything).
I have HSMODEM7 setup. That's it!

http://www.interlog.com/~schrist/taf/

Thanks for any help anyone can provide. (For anyone in the Greater
Toronto Area Info Interlog does now support true STIK access. Write me
for more information!)

973. Accelerator or graphics card for Falcon?

Newsgroup: comp.sys.atari.st
Date: 1997-04-16 00:00:00 UTC
From: oscar@justified.com
Message-ID: <MPG.dbe2677b2bdbfd3989685@news.primenet.com>
Source record: 123882

Toad computers is not carring the Blowup or the PowerUp accelerator for the Falcon any more. Where can I get a good accelerator for my Falcon? I would also like to increase the colors and resoultion on my Falcon, the only graphics card I can seem to find is the Nova graphics card which sounds great but I can't afford. Is there a good alternative. I have ScreenBlaster II. Is that the best I can do without spending $500 on a Nova card.

thanks, lewis

Finally an explanation of why CAB.OVL 1.21 doesn't work. Tried out your theory and you're right on. I can, however. use 1.20h successfully.

What changes have been made to 1.21 that would make it worthwhile to give up FTP? I can probably live without gopher now that Hensa seems to be history.

If I just wait, will this bug be fixed in the next release of CAB.OVL?

: >the colour in empty fields. MSIE 3 is now the only browser that
: >displays my homepage correctly :-(
:
: I would stick up for Netscape and CAB here. According to the O'Reilly
: Associates book "HTML: The Definitive Guide", empty cells in tables with
: borders are not embossed but simply left blank, and you have to place some
: minimal amount of content in your cell to give it incised borders -
: presumably Netscape and CAB apply the same rule to coloured cells. In my
: experience, a space does not count as "content" when it comes to cells.
: O'Reilly suggest "
", but some browsers appear to behave oddly when a
: table cell ends with a line break. I would recommend you use a 1x1
: transparent GIF instead.

I don't know why my name is listed above as being the one irked by this
new feature of CAB. As I certainly am not. I like the fact that CAB
follows the published standard on things like this.

As for making sure an "empty" table cell prints out "depressed" instead
of flush with the borders, the safest method, I think, is to put a "no
break space" into that cell ( ).

986. Hale Bopp/Parody Song/CAB v2.0a Test/

Newsgroup: comp.sys.atari.st
Date: 1997-04-16 00:00:00 UTC
From: csilver@kendaco.telebyte.Spam.This.com
Message-ID: <5j1u7t$kgs@news.telebyte.com>
Source record: 123895

Hi Kemosabes,

While testing "frame" sites for the new CAB v2.0a I found this gem. If you would like a good laugh or at least a smile, try connecting to this Web site:

http://www.premrad.com/comedy/

Follow these links: Comedy Backvault; to Parody Songs; to Backvault '97 Try Hale Bopp (At the Hop), Walkin' through Heaven's Gate (Knockin on Heaven's Door), I Hate McVeigh (I Love L.A.). These are AU files.

Use a good AU player like William Wong's PHPLAYER in your External Viewer's Option in CAB. The AU files are ~600k to ~700k files and play for about 1.5min. If you have a good set of Stereo speakers, you'll love it =).

This site gets about 50,000 hits a day and if you try it you'll understand why; *VERY* professional! This is a very GOOD test of the new CAB and a lot of fun...Now if you only had a 56k modem ;)

I have written a whole book (450 pages!) with the old Publishing Partner
DTP on Atari ST512 computer.
Now, does anybody know if PageStream as the follower program support the
old file format, e.g. for import?
If yes, also version 2.2 on Atari?
What kind of export format are also available?

Thank you for the answer.

VideoMaster is OK for messing about with. If you really want to do
something serious, use the Apex/Expose combo. AFAIK though, Expose
still only works with PAL video signals, which rules it out for use in
the States.

I have PC, ST, STE and Falcon computer at home
and have now added a Hades 060 to my collection of computers
and it is very, very fast but don't have the soundchip as the Falcon have.
The things i like with Hades is that it have PCI, ISA and VME bus expansion ports
so it is easy to get new expansion cards to the Hades, like graphic cards.
I have the PC only to..... hmm.. i don't know.... collect dust.

Spooky?...this arrived on my news server today, I check couple of
time a day,
But I already got your email and your details are on the web page,?
so maybe some sort of time delay IF as I presume, both where sent at
the same time?

Now I am getting worried as to what does get through, I dont mind
half the waffle I spurt out not getting through ;-), but announcments?

Such as I recently announced the release of Billy Boy and am now
worried that no one has read it :(

Ho well...life? :)....probably a lot worse on anothet planet :)

I aint that up on it myself,:)

The best way to get ST+ is to download from the webpage as it will
allways be there the exact day it is released, and thats usualy the
last day of every month, well usualy = allways..usually ?

This months ST+ is being released at the UK ATARI shows so will be a
few days early and will be on the web page the night before :)

.

> but then nothing. Any Atari hard drive utilities do not recognize the
> drive.

The first thing to do is make sure the drive is spinning up. BOTH lights should come on at a certain point and you will hear a "chugga-chugga prrrrrrrr" noise when the drive is ready (at this point the second light will go out). The drive MUST spin up BEFORE you turn on the attached computer.

If the drive is not spinning up, the bearings may be stuck. You should then open the case and check out the disk (usually a Seagate 238R = RLL). Check all the connections to make sure the hard drive is getting power. Give the bottom rotating "platter" a gentle spin by quickly turning the box around (kind of like turning the steering wheel to avoid something and then straightening out immediately). This may loosen up the stiction. If this doesn't work, you can also take out the drive and move the "platter" gently with your finger; then try powering up. If nothing, move the "platter" while the power is on (at this point, what have you got to lose?).

If all else fails, the hard drive can be replaced by any standard RLL hard drive (MFM *may* work but it's not up to the standard of RLL and you might have lots of errors).

Good luck,

Randy Kwak

>
> My footmassage, err ST, says "520 ST" on the front. It has internal
> modulator but external drive, doesn't it have to say STm on the model sign,
> or what?

I was not aware of the existence of a plain STM model, I always thought
the 'M' or not 'M' just came after the STF evolution.

Anyway, whatever the model, only the F appears on the model sign above
the keyboard. The official designation, with or without the 'M' is
written on the sticker under the computer, but even then, it doesn't mean
much:

My french STFM has 'M' written underneath, but never did have a
modulator, because the machines sold in france were shipped standard with
a scart/peritel lead that connected directly to the monitor port (all TVs
sold here since 1981 have a peritel port), so they didn't need an RF
modulator to connect to a TV, and the image quality was better.

All this sums up to the following facts:

-Only ST, STF or STE are written on the case above the keyboard.

-ST,STE, STF, STFM, (STM ???) are written on the sticker underneath the
computer

-French (any other countries?) STs and STEs do not have an RF modulator, whether they have an 'M' or not.

-Some older plain STs have a modulator, but do not carry the 'M'.

My theory is that contrarily to what is commonly admitted, 'M' does not designate whether an RF modulator is on board or not, but rather indicates maybe a motherboard revision, (My STFM is Rev C) or a small evolution after the integration of floppy drives.

So History should go like this (and I voluntarily exclude Mega STs) :

ST
STF
STFM
STE
...

But who cares about my theory anyway...

Well, there a new WWW page which seems to be perfect for this sort of query:
http://www.users.zetnet.co.uk/aseabrook/a_models.htm
is probably the page you want - it lists pretty well every machine/clone's
specs and current availability... the only thing not listed is a price,
but then that is difficult to judge.

1002. Beeping ST (part 2)

Newsgroup: comp.sys.atari.st
Date: 1997-04-16 00:00:00 UTC
From: jdbowen@mindspring.com
Message-ID: <5j2l26$3u6@camel4.mindspring.com>
Source record: 123911

Thanks for all the suggestions with this beeping ST - I reinstalled that bad floppy drive and took apart and cleaned the keyboard and started it all up again. This time, Floppy A and Floppy B icons come on the desktop (along with a trash can), but the fast, high-pitched beeping still continues (through the monitor's sound, not an actual beep from the computer). Funny, though - I don't have 2 floppy drives, only the one that supposedly doesn't work (I can't test it because the keyboard still won't respond and the mouse still doesn't move). Any more suggestions, or better yet, is there a place that fixes STs? There's a 4 meg memory expansion on this STf, and I really want to keep it if I can...

I'll swear blind my STFM actually says 520STFM on the sticker above the keyboard. I've owned the machine since it was new & now you've got me wondering!! I'll just *have* to check when I get home.

Try Chris at Computer Direcet in Canada and see if he is selling the Nemesis board yet. It looks to be the best bang for the buck! I think he is also selling the Afterburner but that is rather expensive.

The Nova Graphics card looks good, and Homa Systems is a great Atari dealer but beware-the Nova card in use on a Falcon precludes any Ram over 4 megs! In other words you can't use 16 megs! (14) Homa says this is do to Atari's poor engineering, and is not the fault of the Nova card. (I'm talking about Ram plugged into the Falcons memory slot) Nemesis, AFAIK will give you True Color in 640 x 480 VGA modes instead of just that odd size... I'm not sure about any other alternatives-anyone else care to jump in and help Lewis!? :)

>
>thanks, lewis

Well, I'm not sure about "polarity"... Usually any 72 pin SIMM will work
fine, just keep it around 80ns speed or so. Whats the docs with the Ram card
say? When you expand your Falcon to 16 megs, (whether its 1 16 meg 72 pin
SIMM or 4 4 meg 30 pin SIMMs) you will have 14 megs of useable Ram because
TOS reserves the upper 2 megs for devices 'n such... You'll love the extra
Ram though, I certainly did! :)

oscar@justified.com (Oscar Fowler) said:-

>I am curious about editng video on my Falcon. Anyone have advice or
>comments on VideoMaster. Is Apex Media w/ Expose a good alternative?
>
>thanks lewis

Lewis, one of the users who logs on my BBS uses VideoMaster for the Falcon and he has a lot of positive things to say about it. He also says that its not perfect, that sometimes it "scrambles" his screen display and a few other odd problems, none of them fatal. He likes it overall. (he must, he took the time to upload a stop-animation file of clouds over his house to my BBS and it was like 3 megs or something!)

Good luck with Apex Media and Expose if you are an NTSC Falcon owner! I am and nobody will sell me one (actually I don't think they are available here in the U.S. anymore) because Expose has problems with NTSC. Toad Computers sold 5 units, and had 4 returned because they wouldn't work. (AFAIK) PAL Expose's in Europe seem to be okay with PAL Falcons. I E-Mailed Titan and they told me it was a small problem that they were sure their expert would fix in no time. That was quite some time back, and the last E-Mail I got from them indicated that they were looking at other alternatives for doing digitizing work on the Falcon-draw your own conclusions... :(

I hope that whatever they do come up with is as good as Expose/Apex because I sure would have liked to have seen PIP and the rotating video-wrapped cube on my Falcon! (it was really one of the main reasons why I so looked forward to owning the Falcon-since then I've learned to appreciate the machine for so many other things-of course...) <grin>

I don't know what you mean by "polarity", but if you're worried about
inserting the SIMM the wrong way, don't. It's not possible.

>is. And does that mean the Falcon will ignore the 2 extra megs or will I

72 pin Simms only have ONE direction for plug in.
Watch for the "nose" of simm board.

Your falcon only can handle 14 MB, you spend 2 Mb for nothing.
(It's a smal mistake from the internal mmu/combel-chip)

(We are all do that..)

regards, robert

When I made the switch, there was either a program which converted
formats, or PGS did the conversion itself (I don't remember which).
However, I can find no such program on my hard disk now (but that
was a LONG time ago.)

Atari Falcon030 + FPU + Nemesis http://www.the-gap.demon.co.uk/

1013. FS: Atari/Falcon/ST books/games/hardware (& Gameboy stuff)

Newsgroup: comp.sys.atari.st
Date: 1997-04-16 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.041697.210636.17@wxs7-15.worldaccess.nl>
Source record: 123922

This is the March 16th version of the list of Atari stuff that I have
for sale.

ALL THE TITLES BELOW ARE ORIGINALS, PRE-PROD COPIES, OR EVALUATION
COPIES (so you might not be able to upgrade all utilities).
NONE OF THESE TITLES ARE PIRATE COPIES!

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Games with + are excellent games that I've played for hours and hours...

+Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
+Arkanoid (Imagine/Ocean) (SOLD)
Backlash (Paul Woakes, Novagen)
+Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
+Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
+Bubble Bobble (disk will handled, was my absolute fave game) (SOLD)
Centipede (the Sinister Developments version) (SOLD)
+Chaos Engine (2 disks, disks patched for use on Falcon, can't press any keys
until the game starts or it won't work; don't know if it still works on the ST)
(SOLD)
Deep Space (2 disks, Psygnosis)
Defender II (ARC/Atari, by Jeff Minter, classic game, but difficult to play)
(SOLD)
Dragonflight (Thalion, 2 disks, double-sided drive required) (SOLD)
+Dungeon Master (SOLD)
+Enchanted Land (Thalion) (SOLD)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
+Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
+Gods (superb game, two disks, by Bitmap Brothers)
+Goldrunner II (boot/game disk plus data disk, by Microdeal, 2 disks in total)
+Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
+Gridrunner by Llamasoft, excellent game by Jeff Minter (SOLD)
Hitchhiker's Guide to the Galaxy, the original Infocom adventure (alas, no
gadgets anymore, I lost 'em all) (SOLD)
Jambala, the Seven Gates of (Thalion, DS disk version)
+James Pond (by Steve Bak, Millenium Software, preview copy, but is a full one)
(SOLD)

Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
+Leatherneck (Microdeal shoot-em-up, really cool, you have to disconnect printer to
get it to work, does not work on Falcon, alas)
+Lemmings (need I say more?) (SOLD)
+Oh No! More Lemmings (totally addictive) (SOLD)
+Lemmings 2 (more addiction) (SOLD)
+Lethal XCess (absolutely great shoot-em-up from the author of Wings of Death, by Eclipse, 2 disks)
+Little Computer People (Activision, really cute game) (SOLD)
+Magic Pockets (great Bitmap Brothers game, one disk)
Monster Business (platform game, Eclipse design)
+Nebulus (by John Phillips, excellent game) (SOLD)
+Obliterator (2 disks, Psygnosis)
Photon Storm (hellishly difficult Jeff Minter game) (SOLD)
+Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
+Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by Steve Bak, excellent graphics, great game)
+Revenge of the Mutant Camels, registered version for 1 Mb ST
+Rick Dangerous (pre-prod copy, looks dodgy but is full version, and legal too. Heavily used, was one of my fave games)
+Rick Dangerous II (also a fave!) (SOLD)
The Sentinel (legendary Firebird game with 10000 levels or whatever) (SOLD)
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
+International Soccer (Microdeal, I think it's the best soccer game ever on the ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
Starglider (the legendary Jez San game!)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
STrikey (Pacman clone by STRIKE-a-LIGHT, ancient)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Virus (legendary David Braben 3D game, by Firebird, doesn't work on all disk drives (sometimes you have to press the 'eject' button lightly) (SOLD)
+Warhawk (budgetware shoot-em-up by Silverbird, with Rob Hubbard music)
+War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up, graphics by ES of TEX)
+Wings of Death (truly great 2 disk shoot-em-up, by Thalion, several levels have graphics by ES of TEX)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details. This includes postage and packaging.

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
1st Extra (1 disk, version 1.03, allows index/contents etc. for 1st W+)
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Diamond Edge, the latest version 2 ** (with manual) (SOLD)
Diamond Back 3 ** (with manual) (SOLD)
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Geneva ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Imagecopy 4 ** (2 disks) (with manual) (SOLD)
K-Rhyme (rhyming accessory) * (SOLD)
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Neodesk 4 ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Le Redacteur ** (4 disks) (SOLD)
Spectrum 512 * (512 colour drawing program, regular ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds). The Do note: Protext/Le Redacteur manuals are big whoppers of things, so those will cost 5 pounds extra instead of 2.5.

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 25.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10) 17.5 English pounds.

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

THIRD CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
DEF Demo (1 meg version of the first TLB demo, with hand-written label by Tim of the Lost Boys himself!): 2 (SOLD)
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 7.5 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 1
Lightning Demo (by pendragons, with handwritten label by pendragons): 1
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 6
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 3
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 1.
Colorz: By Haemaroids, hand-written label by them: 1.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 1.

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are

"STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

FOURTH CATEGORY: MISCELLANEOUS

ATARI CD ROM (SOLD)

ATARI ST CARTRIDGES

And then there's the "Multiface II" and "Ultimate Ripper" cartridges. I also have those. They're ST-only, NO FALCON COMPATIBILITY. I haven't got the manuals anymore either. If you're interested, email me with an offer (I had in mind about 10 British pounds each).

LYNX CARTRIDGES

The following Lynx games are available for 5 British pounds each:

(No manuals and boxes)

Gauntlet (SOLD)
Ninja Gaiden
Rampage
Robosquash (SOLD)
Todd's Adventures in Slimeworld (SOLD)

I am willing to swap any of those for Battlewheel.

GAMEBOY CARTRIDGES

(No manuals and boxes)

The following Nintendo Gameboy games are available for 5 British pounds each:

Bubble Bobble (difficult to play, a real challenge)
Dragon's Lair (beautiful graphics, difficult to play)
Hyper Lode Runner (the classic game)

I am willing to swap any of these for that old tennis-game that was released for the Gameboy in 1989 or 1990.

BOOKS

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). ALL BOOK PRICES MENTIONED HERE ARE WITHOUT POSTAGE!!

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 (INT(x/5)=x/5). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

You are right STFMs do have STFM on the keyboard.

From: Oliver_Schildmann@LU.maus.de
Message-ID: <199704171210.a950@lu.maus.de>
Source record: 123724

Hallo Paul,

N> I'm using ST Zip and I need to compress a directory of folders into zip
N> files ie I have a directory of 50 folders named 1,2,3 etc and I need to
N> get them compressed into 1.zip, 2.zip etc Is there any way to do this?
An elder utility of mine, X-Info, can exactly do that.

Drag folder "1" to the icon, hold down the right mousebutton and it creates
"1.zip" or "1.lzh". You can configure whether the archive-structure is
"1\file.dat" or just "file.dat".

Although it`s only in German, there is nothing much to understand for that
purpose ;-)

On interest, I can send it to your internet email-account...

Gru�, Oliver

1016. Anyone using a 56k modem?

Newsgroup: comp.sys.atari.st
Date: 1997-04-17 00:00:00 UTC
From: lais@cs.man.ac.uk
Message-ID: <5j5b1k$d8c@m1.cs.man.ac.uk>
Source record: 123725

In my excitement over the price of 33.6k modems, I forgot about the existence of 56k models, until I stumbled across a Motorola advert. Is anyone here using a 56k modem on their Atari? I know the software supplied with modems nowadays is no use to Ataris (except to format for a blank disk?) but I think I want one of those smart Motorola things :-)

Actually, they do say that... Its in very small print at the upper right
hand corner of the E in STe or T in ST... (and I'm talking about 1040's
here-I'm not sure about 520ST's!) Look closely! :)

PS I just took a look at my vintage 520ST and it does not
have any F or M but does have the external floppy and a
modulator...

1021. Magic 5 - WERCS Rsc editor doesn't!

Newsgroup: comp.sys.atari.st
Date: 1997-04-17 00:00:00 UTC
From: rojewski@primenet.com
Message-ID: <5j5ccp$1k4$1@nnrp01.primenet.com>
Source record: 123730
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st

I just installed Magic 5.03. My WERCS resource editor which comes
with Lattice C gets 68000 exceptions (#-69) whenever I close a dialog.
Both in multi and single tasking modes.

I worked fine on TOS 4.04... Ideas?

John

1022. Quick FAQ - Draft 0.6

Newsgroup: comp.sys.atari.st
Date: 1997-04-17 00:00:00 UTC
From: bales@garonne.stortek.com
Message-ID: <861289708.10460@dejanews.com>
Source record: 123731

Here it goes again...

It's getting a little bit large for a 'quick' FAQ, so if anyone is bothered by the size of the thing, just let me know and I'll start putting it on a website or an FTP (or both) and just post a pointer on here...

I've added a few sections (how to use the desktop if you don't have manual or a mouse) and made a few other minor changes in this version. It still is in draft status, though I think it'll soon be stable enough to get to v1.0.

Enjoy!

Nick

THE ATARI ST QUICK FAQ

Draft v0.6 - April 17th 1997
Nicholas Bales - bales@garonne.stortek.com

In order to save bandwidth and avoid comp.sys.atari.st newcomers asking the same questions over and over again, here is a quick list of the most Frequently Asked Questions (FAQ) and, hopefully, useful answers. The aim of this FAQ is not to answer all of your questions, but only to indicate pointers to the most common ones.

Please note that this FAQ is aimed at newcomers and is mostly ST oriented, but I hope it will also be of use to more experienced users.

I am only the compiler of this FAQ. I have built it up from many c.s.a.s threads, older FAQs and other internet based information. I am not really such an Atari specialist myself, and have no personal experience of many of the topics that are dealt with in this FAQ.

Therefore, if you have more specific questions, please direct them to the newsgroup instead of me. Any comments regarding the FAQ itself however (corrections, additions, comments, total contradictions) are absolutely welcome. I'll be quite happy to correct any omissions and errors.

Topics that are not covered in this FAQ might be in the older FAQs:

ftp://ftp.sn.no/user/hallvart/atari/info/n_faq1.txt
ftp://ftp.sn.no/user/hallvart/atari/info/n_faq2.txt
ftp://ftp.sn.no/user/hallvart/atari/info/n_faq3.txt

Credits are listed at the end of this file.

New items in this version are marked with an asterisk symbol (*)

---

*STANDARD DISCLAIMER:

I cannot be held responsible of any data loss, hardware damage, warranty voids, or thermonuclear warfare resulting in the application of anything written here. Nobody else can be blamed for any misuse but yourself. Any action that is described here may only be done at your own risks and perils.

CONTENTS:

1. Starting up on the Atari ST

* 1.1 What kind of machine is an Atari ST ?
1.2 What kind of monitor can I use ?
* 1.2.1 Connecting to a TV Set
* 1.2.2 Atari Monitors
1.2.3 VGA,SVGA or multiscan monitors
1.2.4 Falcon Monitors

1.3 How do I boot this ST thing up ?
1.3.1 Booting without a disk
* 1.3.2 Getting started without a manual
* 1.3.3 Atari Language disks
* 1.3.4 Running without a mouse

* 1.4 Can I run Atari ST software on my PC/Mac/Unix box ?
1.5 Where can I get the TOS ROM images ?

2. Software

2.1 Where can I get WareZ for my ST ?
2.2 What are the main FTP sites ?
2.3 Is there a DOOM clone for the Atari ?

3. Hardware Upgrades

3.1 How can I upgrade memory in my Atari ?
3.1.1 Expanding SIMM equipped models
* 3.1.2 Expanding DRAM equipped models
3.1.3 Those Falcon boards
3.2 What kind of hard disk can I connect to my ST ?
3.2.1 ACSI Hard drives (Atari Megafile and SH series).
3.2.2 SCSI hard drives
3.2.3 IDE hard drives
3.2.4 ZIPs, CDROMs, Syquest drives and non-SCSI
3.2.5 Hard disk driver software
* 3.3 I want to replace my floppy drive. What should I do ?
* 3.4 How can I upgrade the operating system ?

4. Connectivity

4.1 How can I transfer files between a PC and an ST ?
4.1.1 Exchanging TOS and MS-DOS disks
* 4.1.2 Exchanging TOS and Macintosh disks
* 4.1.3 Serial port file transfer
* 4.1.4 File conversion
4.2 How can I hook up my ST to the Internet ?
4.3 Where are the good Atari Web Pages ?

---

1. Starting up on the Atari ST

*1.1 What kind of machine is an Atari ST ?

The Atari ST is a 16/32 bit Motorola 68000 based personal computer range started in the mid 80's which has evolved over the years into more modern computers like the TT or Falcon. Here are some generic specs. Some models differ from these specs, so check the list below

Processor: Motorola 68000 (68030 on TT and Falcon)
Processor Speed: 8Mhz (16 on MegaSTe and Falcon, 32 on TT030)

Screen Resolutions:

ST/STf/STfm/Mega ST
ST High: 640x400/Monochrome on dedicated monitor,
ST Medium: 640x200/4 colours on colour monitor or TV,
ST Low: 320x200/16 colours on colour monitor or TV,
512 colour palette
STe/Mega STe
ST resolutions (above)
4096 colour palette
TT:
ST resolutions (above)
4096 colour palette
TT Low: 320x480/256
TT Medium: 640x480/16 (plain VGA)
TT High: 1280x260/2 on an ECL monitor.
Falcon:
262144 colour palette (truecolour)
ST resolutions (above)
many other resolutions like 640x480/256 or 16 bit truecolor
(65,536 out of 262,144). 640x400 interlaced is the maximum
on ST colour monitors.
Ports:

ST/STf:
Cartridge
Midi In/Out
Parallel
Serial

Proprietary Monitor port
External Disk Drive (except Falcon)
ACSI
Joystick/Mouse

STfm: same as ST/STf (above) plus:
TV antenna

STe: same as STfm (above) plus:
RCA/CINCH stereo
Analogue joystick

Mega STe/TT: same as STe (above) plus:
LAN
SCSI

Falcon: same as Mega STe (above) plus:
SCSI
No ACSI
microphone and DSP port
No external disk drive

Model Specs:

Falcon	16/030	2-14Mb	P	4.04	1.44Mb	BE TC	Many enhancements (below)

R=RAM type (D:DRAM/S:SIMM/P:Proprietary memory board)

M=RF Modulator
B=Blitter chip
E=Enhanced 8bit DMA stereo sound, 4096 colour palette, hardware scrolling,
analog joystick ports
S=MegaBus processor direct bus slots

V=6U VME bus slot
K=Detached keyboard design
T=Internal time/date clock
C=68882 Math co-processor

In addition to all this the Falcon030 also has many enhancements the other models don't have. To name just a few : DSP (56001) subsystem, 16-bit graphics system, 8-channel 16-bit sound system, 16-bit expansion port.

1.2 What kind of monitor can I use ?

* 1.2.1 Connecting to a TV Set

STfm and later models were equipped with an RF Modulator allowing them to be connected to a TV's antenna connector. Check section 1.1 to see if your ST has a modulator. You then need to tune into the correct channel on the TV to get the ST picture.

In some countries, Atari shipped machines with a SCART/Peritel cable that plugs into the monitor port instead of the RF Modulator. In this case you need the adequate cable and a SCART/Peritel equipped TV set. No tuning is required, and the picture is higher quality than through aerial.

A TV will only display in low or medium resolution modes, without Sebra which is a software ST hi-res 640x400 interlaced emulator.

1.2.2 Atari Monitors

Monochrome (640x400 colours) requires special Atari high resolution 70Hz monitors (SM models). These monitors have a very stable paper white display. SM monitors can only display monochrome mode. TTs and Falcons can do without the SM monitor and display ST high on a VGA monitor.

ST Medium (640x200/4 colours) and ST Low (320x200/16 colours) need a colour monitor (SC series) or a TV.

If you want to display all ST screen resolutions with an ST/STf/STfm/STe you need both types of monitors, unless you use a multisync or a software ST hi-res 640x400 interlaced emulator such as Sebra (see section 2.2)

These monitors cannot be connected to a TT. You'll need VGA for a TT.

1.2.3 VGA, SVGA or multisync monitors

First of all, you need a monitor that supports the following refresh rates :

	ST High	ST Low/Medium
Vertical refresh rate	70 Hz	50 or 60 Hz
Horizontal refresh rate	31.5 Khz	15.75 Khz

A FAQ on the use of multisync monitors with the ST can be found here:

ftp://ftp.teleport.com/users/atari/multsync.faq

1.2.4 Falcon Monitors

The Falcon is equally happy with a VGA/SVGA/etc. monitor or an old ST/STe type monitor (though resolution will be limited to 640x400 interlaced on these).

When you buy a Falcon you _must_ also simultaneously buy a "video cube" for it, that connects to the Falcon's proprietary 19 pin connector. There are two cubes that were sold by Atari, one for the ST type monitors, one for the VGA type monitors. Which you get is completely up to you. Shortly after the release of the Falcon, third party developers also released "cubes" that could be used with both types of monitors. The cube is an uncomplicated adapter and costs between US$10 and US$15.

A text file about Multisync/VGA/ST-res adaptors for Falcon is here:

ftp://nic.funet.fi/pub/atari/falcon/doc/falcadap.zip

1.3 How do I boot this ST thing up ?

1.3.1 Booting without a disk

First of all, Atari models with TOS in ROM don't need a boot disk. If you do not have a correctly formatted double density disk to boot from, just wait a few minutes for the GEM desktop to come up on it's own, then format a clear double density disk using the menu option.

If the desktop screen doesn't come up after more than 5 minutes, either your ST is broken or you have a very old ST (neither f or fm or e) without TOS in ROM.

* 1.3.2 Getting started without a manual

If you have never used an ST and don't have a manual on hand, these are basics you need to know to use the desktop, the rest is pretty straight-forward :

Main file types:

PRG,APP,TOS and TTP are executable program files,

ACC are accessory files. These go in the disk's root directory, and appear after boot in the Desk menu in order to be always accessible in the menu bar. There is a limit of 6 desk accessories.

INF, SYS are system information files.

AUTO folder programs are PRG files that are placed in an AUTO folder in the disk's root directory. These programs will be launched at bootup. Some will remain resident. Not all PRGs can be used this way.

To open a file, a folder or a floppy, or to launch a program, double click on the icon, or select File -> Open... in the menu bar.

To copy a file, select it, and drag it onto a disk or folder icon,

To delete a file, select it and drag it onto the trash icon,

To make multiple selections, hold shift down while selecting

Newer TOS versions, have other features, but I will not go any further in this Quick FAQ.

* 1.3.3 Atari Language disks

Depending on the ST version you have, a language disk was supplied with some basic software, mainly:

CONTROL.ACC or XCONTROL.ACC: Control panel desk accessory
STBASIC or STLOGO: Very bad computer programming languages
Various TOS patches

Very few of the programs supplied on these disks were of much use. If your systems disks have been lost, it is no big deal. Higher quality public domain or shareware equivalents can be found on most FTP servers (see section 2.2).

Software supplied with the Falcon included several commercial programs such as MultiTOS, Atari Works or SpeedoGDOS. These are not freely available.

* 1.3.4 Running without a mouse

Some people get their hands on old STs with missing or faulty mice. You can get around without a mouse by using the following key combination: Alt+Cursor keys: moves the mouse pointer Alt+Shift+Cursor keys: moves the pointer pixel per pixel Alt+Insert: left mouse click

You will soon need a new mouse though. Any ST compatible one will do, but they are hard to find nowadays. There is an Auto folder program called mouse25 that will allow you to use a PC serial port mouse (see section 2.2).

*1.4 Can I run Atari ST software on my PC/Mac/Unix box ?

You need a program which fools your computer into running Atari ST programs. This is called an emulator. There are plenty of them available on the Internet.

Here are some good net resources for Atari emulator software:

PaCifiST ST emulator for PC (probably the best!)
http://wwwperso.hol.fr/~gidouin/pacifist.html
http://www.geocities.com/SiliconValley/Lakes/6875/pacifist.html
http://www.jetman.demon.co.uk/st/index.html

http://shaw.iol.ie/~ajankows/st/pacifist.html

Gemulator ST emulator for PC
http://www.emulators.com/

STonX ST emulator for UNIX
http://www.complang.tuwien.ac.at/nino/stemu.html

TOS2WIN ST emulator for PC
http://www.aixit.com/

Other emulators
http://www.nfinity.com/~swhalen/node99/st.html

1.5 Where can I get those TOS ROM images ?

TOS is the ST's operating system. It was supplied on ROM chips with most STs. Some emulators need an image of these ROMs in order to run.

However, TOS is copyrighted software and the distribution rights belong to Atari. Neither Atari nor JTS (the company who now owns Atari) has stated that any version of TOS can be freely distributed and used. Distributing it without a licence is therefore software piracy, which is illegal and enforced everywhere in the world.

Solliciting pirated software is also illegal.

Owners of a real ST can use a program called TOSDUMP.PRG to make a TOS image for their own use. This is considered legal as long as the image is not distributed and you own a legal copy of the program (ie: the ROMs).

Illegal copies of TOS images *can* be found on the net. Please note that using one is illegal, and asking for them in the newsgroups is against the charter and will cost you plenty of flames and trouble.

---

2. Software
==========

2.1 Where can I get WareZ for the Atari ?

Software piracy is an illegal activity. Participating and promoting it is considered an offense on most newsgroups, and comp.sys.atari.st readers are strongly opposed to it.

If you still wish to ask for pirated software, do so at your own risk, but be aware that you will receive flames, complaints to your domain administrator resulting in losing your internet access, general discredit and maybe even more trouble.

See also section 1.5 on TOS ROMs.

2.2 Where can I get freeware or shareware on the Net ?

There is lots of freeware and shareware available for the Atari ST on FTP archive sites. Most applications are available as such.

Complete lists of FTP sites can be found here:

ftp://ftp.sn.no/user/hallvart/atari/info/ftplist.txt
http://www.umich.edu/~archive/atari/Info/atari-ftp.sites
http://web.cnam.fr/ftp/pub/Atari/Docs/atari-ftp.sites

Web interfaces to 3 of the most active atari FTP archives:

http://www.cnam.fr/Comp/Atari/Index.html
http://micros.hensa.ac.uk/micros/atari/tos/atari-tos.html
http://www.umich.edu/~archive/atari/

FTP mirror to uni.paderborn and umich archives

ftp://sunsite.doc.ic.ac.uk/pub/computing/systems/atari

Do not forget that shareware (and sometimes freeware) means that you have to register the software if you use it regularly. Please do so as this is an encouragement for programmers to continue developing for the Atari platform.

2.3 Is there a DOOM clone for Atari ?

SubStation from UDS is a Wolfenstein 3D clone for the STE, without texture-mapping, but with a similar look and feel. UDS has a web site:

http://www.uds.se/complete.htm

Bad MOOD is a joint internet project to build a 3D Doom engine for the Falcon. More information can be found here:

http://rand.thn.htu.se/cgi-bin/buildpage?bad_mood

---

3. Hardware Upgrades

3.1 How can I upgrade memory on my Atari ?

3.1.1 Expanding SIMM equipped models ----- If your ST is equipped with SIMM memory, you can easily upgrade your memory to 1, 2 or 4Mb by just taking out the old SIMMs and popping in the new ones.

The correct memory type is 30 pin SIMMs, with or without parity, 256Kb or 1Mb. The minimum speed of 256Kb SIMMs is 150ns and 120ns for 1Mb SIMMs. It is best not to mix different SIMM types. They must be implemented by pair in slots 1 and 3, then 2 and 4 (from back to front).

Atari STEs are originally equipped with either 2 (520STE) or 4 (1040STE) 256Kb SIMMs that can be replaced by 2 or 4 x 1Mb SIMMs.

Because of a bug in TOS, STEs will not recognize a 2.5Mb configuration (2x256Kb + 2x1Mb) without a small AUTO folder program called silkboot 2e. This can be found on most FTP sites (see section 2.2)

* 3.1.2 Expanding DRAM equipped models ----- On DRAM memory models, the memory chips are soldered directly to the computer's motherboard. This make expansion more tricky. Each chip has to be soldered correctly, and the motherboard must have enough room for the expansion. A 520ST/STF can be expanded to 1Mb, a Mega ST can be expanded to 4Mb.

A way around this is to use a special memory expansion board that replaces the original memory banks with standard SIMM sockets. There are many such solutions available like the Marpet Xtra Ram board or the Aixit 10Mb expansion board. Look for Atari related companies on the Atari web pages (section 4.3).

3.1.3 Those Falcon boards ----- The step forward from DRAM to SIMMs on the STE series became a step back to a proprietary memory board system on the Falcon. The falcon was pre-equipped with 3 memory board models: 1, 4 or 14Mb. Upgrading a Falcon means scrapping the original memory and replacing it with either a new proprietary memory board or a third party SIMM board. There are many of these available and can sometimes be combined with a CPU accelerator board (see section 4.3)

3.2 How can I connect a hard disk drive to my ST ?

3.2.1 ACSI Hard drives (Atari Megafile and SH series).

ACSI is Atari's proprietary hard drive connector. It is similar to SCSI which was standardized later, but not directly compatible. Drives that were compatible were the Atari Megafile and SH series that ranged from 20 to 60Mb capacities. Supra, and maybe some other manufacturers also made some ACSI drives at one point, but these are quite rare.

These are the only hard drives that are directly compatible with the Atari ACSI port on original STs.

3.2.2 SCSI hard drives ----- In order to use these, and unless you have an internal Atari host adapter (Mega ST, Mega STe) you need a SCSI host adapter that connects the SCSI drive to the ACSI hard drive port on the Atari. There are several models available depending on whether or not you need parity (no parity only for Mega STe), whether or not they are for external or internal drives. The 2 most common SCSI host adapters are ICD's The Link II and the Link'96 from Norbert Wieczorek. They can be found at:

http://www.icdinc.com/
http://members.aol.com/NorWiecz/index_e.html

Don't forget also that there is not much room for a 3.5 hard drive inside an original ST case. You will need either to put the whole system into a PC type tower case, or to find an external housing and power supply for your hard drive.

3.2.3 IDE hard drives ----- There seems to be currently no way to connect an IDE drive to an ST, although some people are working on the problem. Until this is done, you need to go the SCSI way. See section 3.2.2

The Falcon has an internal IDE slot for internal 2.8" IDE drives. Some Falcon users have managed to fit a replacement 3.5" drive internally.

3.2.4 ZIPs, CDROMs, Syquest drives, anything else non-SCSI ----- These have to be SCSI models and use a host adapter (described in 3.2.2). Parallel port peripherals cannot be used an any ST because Parallel port communication was not fully implemented by Atari.

Be aware also that CD ROMS and ZIP drives need parity enabled, so you must have a parity enabled SCSI adapter.

MFM or any other non-SCSI drives will need a SCSI adapter, that you will then connect to the SCSI/ACSI adapter (section 3.2.1) connected to the ST.

A FAQ on using CD ROMS with Atari computers can be found here:

http://www.mcc.ac.uk/~dlms/CD_FAQ

3.2.5 Hard disk driver software ----- In order to get TOS to recognize the drive. AHDI is Atari's Hard Disk Driver an can be obtained free from any good FTP server (see section 3.2). However, it appears that it is not as capable and efficient as 3rd party driver software such as ICD Tools or HD Driver.

It seems that some drivers are not compatible with some drives while they sometimes give better performance on others.

(Input needed)

*3.3 I want to replace my floppy drive. What should I do ?

Any 3.5" PC 1.44Mb floppy can be used as a double density 720Kb Atari ST drive as these are now very hard to find. Jumpers will need to be set to 'drive 0' for it to be recognized as A: (it will be set to drive 1 for a PC). Some most recent drives reportedly do not have such jumpers, so you have to make sure before buying it. HD floppy drives may also have trouble reading older ST's 360Kb single sided floppies (see section 4.1.1).

Physical mounting may also present problems, but they are not insurmountable.

Using a high density drive in high density mode on an ST, is feasible, but requires a few hardware hacks, both on the ST and on the drive, and a

special Ajax controller chip to deal with the HD format. Some people have gone without the special chip, but this is not recommended. Check out:

ftp://ftp.sn.no/user/hallvart/atari/info/sony_144.zip

Falcons and TTs are fitted as with 1.44Mb floppy drives as standard. Some Mega STEs are also and others can handle them provided they have an Ajax chip fitted and dip switches correctly set.

*3.4 How can I upgrade the operating system ?

The ST's operating system, TOS, is on ROM chips on most STs. Only the very early ones had TOS 1.0 on disk.

TOS 1.2 (1.02) and 1.4 (1.04) came on 6 chips. All later versions came on 2 chips. TOS 2.06 is the latest version that can be used in an ST(e/f/fm). TOS 3.xx is for TTs and TOS 4.xx is for Falcons. These two are highly hardware dependent and cannot be used on other machines.

Upgrading TOS from a 2 chip version to a newer 2 chip one is quite simple, provided you set correctly a couple of jumpers.

For upgrading old 6 chip TOS machines to TOS 2.06, look here:

ftp://home.mtholyoke.edu/users/kellis/atari/tos206up.txt

Otherwise there are many TOS upgrade boards available as well as Bi-TOS boards allowing you to switch from your older TOS to 2.06 with an extra switch. This is to avoid compatibility problems with older programs.

There are also replacement Operating Systems such as MagiC, Geneva (TOS-like) or MiNT and Linux (UNIX-like).

---

4. Connectivity
==========

4.1 How can I transfer files between an ST and another computer ?
---

* 4.1.1 Exchanging TOS and MS-DOS disks ----- The TOS disk format is DOS compatible. This means that any 720Kb double sided double density disk from a PC can be read on an ST and vice versa, and high density disks are also compatible if your Atari can read them.

There are several limits however:

Older TOS versions (before 1.4) do not format disks exactly the same way as MS-DOS, so for these models, you might try formatting the disk on a PC.

Some old 520ST, STF and STFM models use 360Kb single sided drives which are not compatible with most newer 1.44Mb PC models. You must either get a double sided drive for the ST or find a PC that is able to read the old

single sided disks.

Windows 95 uses long filenames and seems to sometimes corrupt TOS disks, so be sure to use the 8+3 standard DOS/TOS format.

* 4.1.2 Exchanging TOS and Macintosh disks ----- TOS is not compatible with macintosh disk format. However modern Macs are supplied with a system extension that allows reading and writing MS-DOS disks which are compatible with TOS (See section 3.1.1).

An old program called DCFormat can reportedly format HFS and MFS disks.

* 4.1.3 Serial port file transfer ----- Another way of exchanging files between ST and PC is to use the serial port with a null modem cable. Ghostlink will do this and can be found at your favourite FTP site (see section 2.2).

ParcP reportedly does Parallel port file exchange between PC and Atari.

* 4.1.4 File conversion ----- Just because a file has been transferred does not make it readable by the software. Here are some file types that come up often.

Midifiles: Atari and PC Midifiles are the same whatever the machine. There are type 0 and type 1 midifiles though, so you need to be able to read both.

Text: The shareware word processor Marcel can read 1stWord, 1stWord Plus, WordPerfect, WordWriter and STWriter files and export to RTF. TWP28 can translate between WordPlus ThatsWrite and WordPerfect. It is probably easier in most cases to export/import text in ASCII.

Pictures: You can use Gemview to convert just about any graphic format to GIF or JPG formats. Paint Shop Pro on the PC can read IMG files.

Sound: FiveToFive (525) can convert many sample formats.

All these programs are shareware and can be found on your favorite ST archive (section 2.2). If you no longer have an ST to run these conversion programs, you might try using an ST emulator (section 1.4).

4.2 How can I hook up my ST to the Internet ?

The ST can be used to send and receive email, read usenet newsgroups, download from FTP archives, and even to surf the web.

There is a whole lot of internet resources on the subject:

The Atari Internet guide
http://zippy.spods.dcs.kcl.ac.uk/~garfield/aig/aig.htm

The Atari Connection
http://www.cedep.com/~gstamant/atari/atanet_e.htm

The good old Atari ST FAQ
ftp://ftp.sn.no/user/hallvart/atari/info/n_faq2.txt

Internet Software for Atari
http://localhost.ruhr.de/~sacha/index_e.html

The STiK support page
http://www.flinny.demon.co.uk/

4.3 Where are the good Atari Web Pages ?

There are too many to list them all here, so here is a quick list of some
of the most complete lists of links:

The Atari ST Launchpad
http://home.sn.no/~hallvart/pages/atari.html

The Elysium
http://www.users.zetnet.co.uk/aseabrook/a_index.htm

Atari Internet Resource Guide

It would probably help if you provided us with the type of hard drive you
have attached to the ST, the host adapter, the driver software etc...

They're still in business - matter of fact, the version of
MacFormat currently on the newstands in Canada has the full version of
their Mac version of Pagestream (v3.2) on a cover CD-ROM.

Two fast options:

1. Radio Shack #274-300a 40 Db attenuator
2. A 100K ohm resistor 1/4 Watt in series with the line in.

Or:

1. Follow the CAF manual instruction to remove mic amplification to Line
Level in.

Any word on what the PCI slot would be used for? Have they been
successful at writing a video card driver? If so, what type of
card? ET6000 or an ATI brand? How about a Number 9:).
Dose the photo show if they installed another CPU that can handle
high speeds or does it rely on the EC version on the Falcon motherboard?
Does the photo show how many memory slots are available and size (30 or 72)?

I have an Atari TT030 that I have not used in at least a year. Is anyone interested in purchasing this machine or should I just drop it off at a garage sale somewhere?

I also have some software like Calamus SL, Geneva, Straight Fax, etc..not sure exactly what else.

If you are interested, please email me, and I will try to find out the details of what I have:)

thanks!

Looking to buy a working STf 1040 keyboard to help troubleshoot my beeping STf problem. I'm sure someone somewhere has a broken STf that isn't worth fixing but has a working keyboard! I don't want to spend more than $15 or so - I also have a bundle of original software that I haven't tested (since my STf is broken) that I'd trade as well - mainly disks that came with an ST magazine over the in UK, along with Joust, and a few other games.

The only place that I know of is Katherine Ellis' Home Page at:
http://www.primenet.com/~kellis/

You should be able to find the KEMD (Knarf's English MiNT Distribution)
Revision 2 ZIP file there. Read it very carefully and do exactly as it
says...

From: jperez@Hawaii.Edu
Message-ID: <5j604s$8tf@news.Hawaii.Edu>
Source record: 123750

Greetings,

I'm wondering if there is anyone out there using a Falcon with a Kurzweil 2000 or 2500. I am looking into purchasing a K2500 and Zero-X, but am curious about the level of SCSI connectivity that is possible. It is conceivable that the K2500 and Falcon can share a SCSI hard disk and/or that the Falcon can send samples to the K2500 via SCSI. Anyone tried this?

Hi,
I'm thinking of selling my Falcon 4/170 with a SC1224 monitor, blowup hard1, fpu, Wizztronics Ram board (I had 16mb of ram in the falcon, but took the simm for my Mac, so i put back in the 4 mb board.), Falcon Speed 286 (pc emulator, not sure if I still have manual), Apple 300cd (2x external cd-rom), extendos 2, Homa Systems Nova Scanner Driver for Mustek 600/1200 series, Calamus SL, Speedo G-Dos, Atari Works, Magic 4, Ease 4, Crawly Cript Cd, All Things Falcon Cd, Gemini Cd, Imagecopy 4.0, 19,200 modem, and a few games.

I may have left something out, so you may get a few bonus progams as well. I am asking $500 US and would like to sell in the US or Canada.

Please e-mail me at fletch@fast.net if interested.

Thanks,
Pete

> fixes STs? There's a 4 meg memory expansion on this STf, and I really
> want to keep it if I can...

Well, this time it really looks like your keyboard is dead...

If you can find someone with a working ST, try exchanging his keyboard,
or his keyboard chip on your keyboard, etc... It maybe just a faulty
chip. However, I guess that if you're asking for help here, you probably
don't know anyone who has an ST.

The best you can do is to exchange the keyboard (maybe from a trashed ST
with a good keyboard).

If, after this, it still keeps on beeping like hell, then maybe your
memory extension might be the cause of the trouble... have you checked
that there are no wires unsoldered ? If these are SIMMs, maybe you could
try booting with only 2 megs, as maybe the SIMMs could be faulty... But
I sincerely think it is rather a faulty keyboard.

As for the drive icons, even with one floppy, you always have drive A and
B on the desktop, as GEM uses this for disk copying : you drag files or a
disk icon onto another disk icon and GEM will ask you to exchange disks
for reading and writing... For deleting files you drag them onto the
trashcan...

So this is normal.

By the way, does it boot on a formatted 720K DD floppy? or are you still
having to wait for the desktop to come up by itself after a while ? If
you can floppy boot, then your drive might be not as bad as it was said
to be...

>
> You are right STFMs do have STFM on the keyboard.
>

Very interesting. My mistake comes from the fact that I've never seen an STFM marking on top in my country.

My french STF has no modulator, and has only STF written on the front sticker, but definitely does have STFM on the model reference sticker underneath, so I guess I was wrong, and the model history should be something like this:

ST - sans floppy, with or without RF modulator (are there any of these without RF ?) STF - with integrated floppy, without RF STFM - with integrated floppy, with or without RF and 'M' marking (depending on country)

I still beleive that the 'M' on my STF means it's from the STFM generation (Rev C), but just has no RF modulator due to the country it was built for.

Sinclap, tlhlngan Hol Dajath'a' ?

I understand your "need" to express your observations to this NG. However, unless you consider yourself an Atarian you should post to "advocacy" and explain why X computer is better than Z. It seems that you may have an Oedipus complex. If you tell me your Daq (location) I'll recommend a good psychiatrist in your area. I'm replying, in part, in an Alien language in hope that I may trigger a subconscious image which recognizes your ability to perceive reality. "blleSnlS !"

Freedom of speech is not an issue. You have that right, but three posts on X vs Z is a bit much...

Do us a favor, bljath'e'ylmer. Even posts in Klingon make more sense, luq? Reposts on this subject will be responded to on "advocacy" only!

This is an interesting thread to watch.

Ive got a small studio and do some recording for various projects. I started with an Atari ST in 1988 and stuck with Cubase on it until sometime in 1993, when I switched to the PC. Later on came the PC hard drive recorders, etc., which until recently havent been impressive. A while back I bought a PowerMac and switched immediately to it for MIDI and hard disk recording. The tools on the Mac are untouchable in the audio world. If you dont agree with that, then youre not keeping up with the current state of the art in hard disk recorders, etc.

With the new batch of PCI multi I/O cards coming out, it looks like the Macs will have some competition. Im more than willing to give any platform a fair shake, no matter which. The Falcon, as Ive seen demonstrated, is easily replaceable by a $700 6100/7100 series PowerMac, or even a low end nubus Performa (6116, etc.). The capabilities of Cubase, for instance, on both platforms is barely comparable.

Both machines, without adding additional hardware (key phrase here), provide a stereo in and out. Cubase VST provides every feature of Cubase Audio on the ST, plus all the amenities (wonderful color, audio enhancements, real time effects, etc). Both machines, lets say a Falcon w/14 megs ram and a 500 meg hd vs. a Powermac 6100 16/500 cost roughly the same. In my mind there is no contest.

Atari loyalists are a fantastic bunch, but if youre genuinely concerned about the bang for the buck youre getting from your hardware, take another look at the competetion. Youll probably be pleasntly suprised if youve got room for more than one system on your table (another key phrase).

Thanks, Joe

> Although I have had no dealings with that board, I can tell you that,
> though you put a 16 meg SIMM in, you will only have access to 14 megs of
> memory. (Compatibility reasons, I heard.)
Not really. The TOS of the Falcon is located at 0xe00000 (you can call
that a compatibility feature), and so the maximum ST-RAM-address one can
access is 0xdfffff, i.e. 14 megs.

Using a "TT-RAM" card like the FX or the Magnum IIRC get around this
problem by using the MMU to map their faster RAM to higher addresses.

Ciao

Thomas

I really need advice, I haven't had this thing up and running for a couple of years, and now I can't access the HD. Took it apart, and moved. I've tried the ICD coldboot utility, with no luck. It keeps saying there is no HD. The system is just plain, unmodified, ST. I'm afraid I've forgotten the old tricks. Thanks much for any e-mail help.

Yep, I certainly get a good response from Yahoo. I went there a few weeks ago and entered my surname and found that there were 351 mentions of Kerslake on the web, and I also went to the yellow pages people section and found 90 Kerslakes in the states!

All using CAB 1.5 and STiK 1.12 and a Trust 14k modem.

Oh...and big bad Nemesised 14 meg Falcon running MagiC 5 helps as well! :-)))

Best wishes
Mike Kerslake

FWIW I've heard that the NOVA card and Georg Achers BLOWup FX card(with
16MB RAM)
can work together. Perhaps because the first 4 MB RAM is treated as ST
RAM,
and the next 10 MB RAM is treated as TT RAM.

1060. Atari user in search of someone who is currently using CAB/STIK with a columbus ohio supported ISP

Newsgroup: comp.sys.atari.st
Date: 1997-04-17 00:00:00 UTC
From: gblanken@freenet.columbus.oh.us
Message-ID: <861281891.4667@dejanews.com>
Source record: 123818

I am currently trying to install the Crystal Atari Browser and ST Internet Kit. with the help of an Atari Beta Tester fo CAB/STIK .
I believe my system is Now configured correctly. I am able to connect and telnet, but when I use CAB and several other products I run in to a resolving host problem where the modem is active but all I get after about 5 minutes is a blank page.

What I am in search of is a user who has already been through this and can help me and hopefully has had experience with a local ISP for Columbus Ohio Franklin county area.

I believe that is right as well... I also think that the Nova will work with
the Afterburner correctly. The tradeoff, of course is that the BlowUp FX uses
the PDS and does not have a passthrough for any other upgrades. Maybe the
next version? :)

Hi!

My girlfriend if a church musician and she have a midi keyboard that she whant to
connect with my Atari Mega STe to have the ability to play and make nice printouts
of the scores.... The problem is that I don't know of any good programs for the
atari. Well, I know that there's a few sequenser programs and stuf, but I'd rather
get my hands of a good music-DTP kind of program. I have a "second hand" program
called 'Music DTP' by 'Take Control' but it doesn't run well with my somewhat
newer TOS.

Can anyone tell me what programs I should be looking for? Are there any demos
of the programs that I can try out?

Thanks, and have a nice day!

/Richard Krejstrup

I know the problem very well, as I used to have a vortex HD40+ as well
as a Megafile 33. In most cases, the booting worked on latter tries.
Just make sure there is no disk in the floppy. sometimes a mouse click
during booting may help. If this doesnt help at all - use hdutil/hush or
diskus (both commercial).

I know there is a German PD software called EKG, playing all the hymns
in the protestant hymn book (don't ask where to get). As for a
sequencer/Midi Editor, I remember alchemy being a sound PD choice.

1076. GEM Version 2.1 and 3.0 for PCs, w. apps $15 ea.

Newsgroup: comp.sys.atari.st
Date: 1997-04-18 00:00:00 UTC
From: cb092@FreeNet.Carleton.CA
Message-ID: <5j831s$h4c@freenet-news.carleton.ca>
Source record: 123684

Most knowledgeble Atarians know that GEM for the ST had a
compemptory twin brother, produced by the same developer
(Digital Research).

The GEM for the ST is burned into a set of eproms and provides
a nice graphical user interface to the text based TOS operating
system which is buried within your ST). GEM for
PCs sits on top of DOS (instead of TOS) and gives your
ibm compatible a very similar interface to what any Atarian
knows and likes.

No this isn't an emulator. No it won't make your PC run
ST applications. It runs DOS applications, but you launch them,
as well as copy files, format floppies, etc. from an ST-type
desktop, instead of the bad old DOS prompt. GEM for PCs
can be loaded into high memory, so that any DOS program
that can run at the DOS prompt can be launched by GEM
for PCs (the DOS Shell program can't do that).

For real fun, run GEM for PCs on top of the command
layer of either OS2 Warp or Windows 95. Now you've got
an Atari-like interface running DOS apps in a 32 bit, multi-
threaded, multitasking environment (effectively replacing
the graphical user interfaces of these powerful operating
systems with an ST-like desktop).

I have two copies of this fun software package, version 2.1
and version 3.0. Each is sold with a copy of GEM draw
for PCs, a nice drawing application which has all the
look and feel of an equivalent ST application, but for a
PC. The price is $15 for each copy of GEM for PCs
including the GEM draw application. Once they are gone
they are gone. Buyer pays shipping

Look for Notator or Logic by Emagic (C-Lab). Clearly the best atari
programs for the Mega STE. They do all you want and more. Cubase is
not bad either, particularly if you have an atari Falcon. I think Toad
Computers still stocks these programs.

Are there any

> I'm a little confused here... I thought WebSpace was from Oxo Concepts out
> of France? Also, is it actually available to the public as a full release,
> or is it still just in demo form? :)

Just the demo form is available until now ... and they are not very
fast to deliver the full version though they are already making big
publicity in the french magazine STMAG for the full program at a price
of 290FF (or 35 UKP ?)

You can join them by e-mail at oxo@imaginet.fr
or go to see their projects at http://www.oxo.ch/

The problem is they don't answer anymore to e-mail since a few weeks
ago ...

Let's hope it will come one day out, because very fast program with
it's own PPP connection program (bye bye MintNet and so ...) and
ET4000 VDI compatible !

Remember one thing OXO are no more OXO CONCEPT but now they are OXO
SYSTEMS

Yup, I'm following up this post at 1024*768 24bit color:)
I went for the ATI 4mb VRAM card. Pretty nice. Nima made
me a deal I couldn't refuse.

I wasn't askiny you. I was asking Kay:).
Her post made it to me before your first response did.
Anyway, she said she had a photo and I was interested,
not specifically in the PCI slot, but more as to if an
additional CPU was shown in the picture. We <ALL> know that
some announcements never make it to market. I just wanted
know what she had seen. The speal on the different cards
was American humor. You would have to be soaked in PC
sales promos daily to get it:).

1082. Re: Thoughts on buying a PeeCee...or, so long Atari, hello WinDoze?

Newsgroup: comp.sys.atari.st
Date: 1997-04-18 00:00:00 UTC
From: Keith Murchison <keithm@impactconsulting.com>
Message-ID: <01bc4c3a$17e48e40$5cce35c6@host-pentium>
Source record: 123690

I've owned well over a dozen Ataris,in my time and have influenced many friends and associates to buy them as well, so no one can credibly cite me as an Atari basher. However, I've got to say that the equation which originally attracted me to the marque,"power without the price" has reversed itself and now effectively reads "price without the power".

All sentimentality aside, the reasons most Atarians originally rallied around the ST, etc. just don't apply. If you want obscene amounts of raw horsepower, rock solid stability, ease of use and an endless supply of apps, all at a decent price, you've got to grab a Windows '95 machine today. These things essentially have the kind of intrinstic buyer appeal, now, that Atari had in its day.

If you keep your Atari today, do it for nostalgia purposes or acknowledge that you like it because it is quirky and cute, but anyone who claims that "Atari rules" probably isn't being very honest with themselves.

I agree with others that, if you have to get a non-Atari machine today to get decent access to the Web, etc. don't bother to pick up a Mac. They are on they way out too and the history of the Atari is already repeating itself
in the Mac arena (too bad in both cases - and I state this sincerely).

Most folks who would rather die than own a PC fall into two groups. First, there
are those who apply biases against these machines, based on outdated past experiences from the bad old days of DOS, etc (Mac guys love to bring up outdated criticisms of the PC and to maintain a mental image that all IBM compatibles are mouseless XTs).

Others who have a thing against PCs really just have a big problem with anything
which is too mainstream (people in this group usually have their biggest problem
with Windoze and/ or the market dominance of Microsoft - proverbial Bill Gates
Haters).

If you fall into the latter category, you might find happiest among the ranks of the
"renegades" who run Linux, UNIX (with or without X-Windows), OS/2 or whatever
on their PCs. These guys still have fun of being outside the personal computing
mainstream (as with Atarians and Mac guys), but have the benefit of having access to an endless supply of low cost hardware and peripherals and they

can surf the net etc. without platform restrictions.

Flame me if you want, but I can honestly say that as a former die hard Atari
advocate, I approached the PC world with a lot of preconceived biases (against
the PC). However, if you give these things any kind of a fair chance they will
win you over for the same reasons as caused you to once embrace the ST.

Keith M.

1083. Help with the format of NOS email files

Newsgroup: comp.sys.atari.st
Date: 1997-04-18 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <46560650_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 123691
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

Can anyone tell me the format of email when it is downloaded via NOS (ie.
before anyother processing by Oasis1 etc.).
I think it downloads files such as gary.txt and mail.log, but can't see how
individual emails are separated within gary.txt :(

Does anyone know? Can anyone help?
I've tried finding out using NOS but NOS just bombs on me these days :(

TIA, Gary

These are shareware or maybe now freeware programs and included on one
of the Walnut disks, and elsewhere on the Web. I forget where.

It does work very well.

From: Evil has no boundaries <chrishinds@delphi.com>
Message-ID: <5tGblsy.chrishinds@delphi.com>
Source record: 123697

I am completely clueless...can someone help me out??

I'm trying to get CAB running with PPPKIT 1.4 . I seem to have gotten as
far as booting up via drive g: with MiNT (appartently, anyway)...I can open
up drive U: and everything seems okay.

When I try to connect, though, (by running the connect.scr), it's instant
crash. The messages go something like this:

pid 3 (OLDGEM): ILLEGAL INSTRUCTION...(some stuff I have no idea about???)
pid 1 (OLDGEM): BUS ERROR (more cryptic stuff)
exit code 2560
pid 5 (syslogd): BUS ERROR (still more of that same crypic stuff about PC
User and text=?????? and other things I can't remember)

Then, I get 4 bombs, a short pause, and 7 more bombs.

I then attempt to turn on the message log, and tried to connect again. Same
thing as before, but my /var/adm/message file mow looks like this:

Apr 18 12:00:20 homer syslogd: restart
Apr 18 15:32:38 homer syslogd: restart
Apr 18 15:35:10 homer syslogd: restart
Apr 18 15:43:10 homer syslogd: restart
Apr 18 15:45:02 homer pppd[10]: pppd 2.2.0 started by unknown, uid 0
Apr 18 15:45:02 homer pppd[10]: Using interface ppp0
Apr 18 15:45:02 homer pppd[10]: Connect: ppp0 <--> /dev/console
Apr 18 15:45:32 homer pppd[10]: LCP: timeout sending Config-Requests <29>
Apr 18 15:45:32 pppd[10]: Connection terminated.
Apr 18 15:45:34 homer pppd[10]: Exit.

It's all greek to me...anybody know what's going on?

and BTW, how does GlueStik fit into all this???????

HELP!!

The mouse and keyboard sockets sometimes get lots of abuse and the
connector under the keyboard can get dodgy. Try wiggling the mouse
plug in the socket.

>* when I use the arrows on the keyboard, nothing happens.

Hold down ALT whilst pressing the arrow keys. The mouse should move
(finer increments with ALT+SHIFT). ALT+Insert is the same as a left
click and ALT+Clr/Home is a right click.

>The result is, that I can't open or close anything... Who can help us???
>Many, many thanks on forehand for any help! Please mail me at:
>psaey@ix.urz.uni-heidelberg.de

If holding down ALT works ok then the problem is either the mouse
socket (check that first) or the mouse (less likely).

Eeerm what about "Usefull", "Does everything asked of it", "Work
horse", "Internet Tool"
A lot of people use there ATARI and get serious use out of them they
don't do this because it is cute, they do it because it is the correct
tool for the job,
Other reasons may be that they have invested a lot of money in there
machines and cannot afford to splash out on new, There are many
reasons for owning and using an ATARI
But I don't agree the only reasons to keep an ATARI are for nostalgia
or because it is quirky or cute?

>drives, only the one that supposedly doesn't work

That's normal. Unless you have a physical drive B plugged in the back
then the system uses drive A as logical A & B (it will prompt you).

>(I can't test it because the keyboard still won't respond and the
>mouse still doesn't move). Any more suggestions, or better yet, is
>there a place that fixes STs? There's a 4 meg memory expansion on
>this STf, and I really want to keep it if I can...

My system sometimes does this on booting. I either hit a key and it
stops or I hit reset again which does the job. All my ST's have
suffered from this (very "once in a blue moon" intermittent) spurious
keyboard repeat "bug", but like others have said, this does sound like
a keyboard fault.

Unplug both the mouse and joystick because they are a complication you
do not need atm. The mouse can be emulated by holding down ALT and
using the arrow keys.

Other situations which might cause this:

Keyboard connector not fully or partially plugged in (power up and
waggle the connector with the top case off).
Broken track(s) on keyboard (flex keyboard or dismantle).
Key stuck down, or cup under key stuck down (dismantle).
Keyboard processor pins not connecting (reseat in socket).

Btw, the spacebar is especially weak, if it's had some abuse the
lifting mechanism may not have the strength to pull it back off the
board. The keys just pull off.

Dismantling is just a case of removing all the small screws on the
underside of the keyboard (no need to pull keys off), taking care not
to let any of the rubber cups escape! It takes a while to reassemble
but it isn't difficult.

>up drive U: and everything seems okay.

My advice. Give up pppkit and use the TAF-package instead. Here in
Belgium I already have helped three guys who where trying to install
the pppkit. Neither of then has succeeded to use it.
The TAF package should work on every Atari with 4 mb RAM. I have
install it on a TT030 (20 mb RAM), Falcon with 14 mb RAM and a 1040 ST
with 4 mb RAM.
>
>and BTW, how does GlueStik fit into all this???????

My second advice: Install gluestik. CAB works much better with the
gluestik/cab-for-STiK overlay combination then with the
cab-for-mintnet overlay.
Installation of Gluestik is very easy. Just a matter of following the
install doc of gluestik

A few things you can check, on the hardware side, that I've seen from my swapouts of the hard drives, from 85 megs to a gig;

- Have you verified that the hard drive is spinning up?
- Is the power supply working?
- Are the connectors in correctly, as well as all jumpers?

One particular hard drive I have acts a little weird sometimes, which is an HP 2247 gig drive. I turn it on, it spins up, but no recognition, til I turn off, then back on the drive power a couple seconds later. If the drive was continuously in use, and then finally turned off, and it refuses to come up, though you see the lights come on, it could be a stiction problem. I had a Quantum 80 meg do just that, and a few quick flips of the wrist got it up again, til I replaced it.

I've even seen the logic boards go bad, and have a couple ST41200Ns with bad ones. One showed an N/A on one of the drive info entries, like the number of heads, that sort of thing. I've got a couple blown mechs with good boards coming in, so I can replace them.

Anyone else need replacement ST41200N boards?

Source record: 123762

Hi there...I am just wondering about something I wish to do.

My dad thought it would be a nice idea to get a ZIP DRIVE (Internal SCSI), then put my two 100 meg SCSI hard drives into a PC MINI-TOWER CASE. Has anyone done anything like this? Also, is there a way to have the Megafile 30 go in there too (my dad can remove it from the case without damaging the hard drive)? Or can it go on the outside and then have the cable plug into the case for connection.

```
[------------------]
[CD ROM Drive (I:\) ] ID #2
[ Zipdrive (F:\) ] ID #? hasn't been assigned since I don't have drive
[ Megafile 30 (C:\) ] ID #0
[ 100 meg #1 (D:\) ] ID #4
[ 100 meg #2 (E:\) ] ID #5
[------------------]
```

NOTE: CD ROM Drive and Zipdrive would go in the 5 1/4" drive bay area while the others would be in the 3 1/2" drive bays.

This is the way that I would have the hard drives on the inside of the case, if they all could go on the inside, if the Megafile can't go on the inside, can it have the plug go the the outside (with right adapter) and then would I connect the drives internally or externally?

PLEASE SEND ME E-MAIL TO PENNEYGUY@AOL.COM SINCE I DON'T GET ON HERE THAT OFTEN. I would appreciate any help that could be provided.

Hello,

The main reason I wrote this program was to put together a list of all the results from as many different combinations of computers as I could. I am still looking for results from various Macs running MagiC, Falcon results, and the new Atari clones. This is the first version of the program that I have released and I understand that there is a bug in the hard drive read/write test. This is being worked on presently but I can't get it to crash on my TT, 68040 Mac, or my friend's 9500 PPC Mac. The other night, I finished a version that runs in ST LOW and is backwards compatible to TOS 1.0 yet still runs in all the other resolutions, MagiC, etc. The problem is that a couple of the tests had to be modified and may be off 5-10% with the first version on different computers. I appreciate anyone who takes the time to send me their results and I apologize once again for my binary to this newsgroup.

Email me with tests results and requests for newer versions...

thanks,

Rob Meyers

Sorry I must say this, but part of this is wrong. Parity is irrelevant;=20
if the SIMMs do not have parity, fine, if they do, it won't be used, but=20
they still work. Speed rating is (almost) irrelevant too, you won't be=20
able anymore to find any SIMMs that are too slow. Type, well, make sure=20
your SIMMs are one megabyte each, have 30 pins, and are real SIMMs (i.e.=20
not SIPPs or similar crap; but those won't fit in the sockets), there is=20
nothing else you need to be aware of the type.

Cheers Peter

My ST will beep and freeze up (exactly as you describe) when one of the mouse buttons (can't remember which one) is held down during a reset. This is because TOS will attempt to put the keyboard processor into a particular operating mode when it starts up. However, due to the extra signal from the mouse, the processor will be initialised into the wrong mode. This will confuse the operating system, hence the beeps etc.

I don't think the disk drive will be the cause of your problems. A faulty mouse or keyboard is much more likely.

Sam Ellis.

Okay, perhaps I didn't make that as clear as I should have but I've always
been told that you should not use SIMMs of different speeds or parity with
non parity...They should all be the same speed and parity. Also speed is
"kind of" irrelevent but you wouldn't want to use 60ns if you could get the
80-120ns versions at a cheaper price. (of course, with Ram prices so low
nowadays, that might be unimportant, eh?) <smile> See ya! :)

>--

Are you certain about that? True the Mac has been stronger than the
ST ever was but it seems to be in dire straits these days. I work in
an office with Macs, PCs, and Sun Workstations. And I've been
following Apple's trial and tribulations for some time. In discussing
it with the Mac users it seems that even they are resigned to Apples'
eventual demise or niche market status.

My work-station is a Pentium 100 with NT 4.0 and it seems to work more
reliably than the Macs (which are loaded with OS extensions and
add-ons) and is much faster and easier to use than the Unix boxes. In
fact the best thing the Unix guys did was to layer a Win95 look alike
interface over Motif.

Still I think I preferred the old days when it didn't matter who you
were compatible with because the market was diverse enough to support
a variety of machines. At one point you could buy the same game, or
productivity program, for half a dozen systems and knockoffs of it for
a couple more. Today we are down to two real platforms for the home,
and maybe only one of those is viable, and I think we have lost
something.

w > SoftLogic, if they have one?

SoftLogik no longer supports the Atari platform. However, they
released the source code for many printer drivers, so it is
relatively easy to write new ones.

If you can provide me with sufficient documentation and be willing
to test, I would be willing to write you a printer driver.

If I remember correctly, this won't work, because it's for a different kind of stiction. The DC program is designed to move the disk heads every so often while the machine is on, so that the heads won't stick in one place. The Megafile 30 problem (which I've experienced, too, and it's a pain) is due to the whole rotating spindle/platters combination sticking in place when the drive is left off for a long time (i.e. more than a few hours), and failing to rotate when the drive is turned back on.

I'm afraid the Megafile problem is probably only fixable by leaving the drive on permanently or replacing the drive (either the mechanism or the whole thing; hard disks are terribly cheap these days).

No, no;
These are messages from the PPPD process.
They are printed to screen if the 'SYSLOG.CON' file says so.
It actually looks quite normal.
Once PPP is operating, you just change the output device
from '/dev/console' to '/dev/null'.

>>Apr 18 15:45:32 homer pppd[10]: LCP: timeout sending Config-Requests <29>

This one is also absolutely normal!

Do check your 'RESOLV.CON' file.
Nameserver must be specified with an IP!
Good luck!

>one of those smart Motorola things :-)
>
>
regarding the 56K modems, they will be perfectly usable - but not necessarily in 56K mode. And this is for reasons other than the Atari (Falcons and TTs can make use of this speed, STs with the proper modem port mod and HSMODEM) - it has to do with the fact that there is still no current 56K standard set. There's a battle currently going on between Rockwell and US Robotics to try to set their 56K schemes as THE standard, so currently there is no standard. Which means that 56K will not work unless your ISP uses the same modem you're using (they will work at up to 33.6, though). My ISP currently offers the use of the US Robotics "standard", while my brother's ISP is offering the Rockwell "standard" (and he's taking shipment of a free 56K modem as part of training he took from USR a few weeks ago), so you can well see what sort of mess we're getting into. The latest issue of .NET has an article explaining all the particulars.

From what I've heard, though, the Motorola would be a good buy, as they're promising a free upgrade to whatever standard is set for 56K....

From: cdaniels@dantooine.demon.co.uk
Message-ID: <861472057.23091.0@dantooine.demon.co.uk>
Source record: 123584

I have just downloaded POP Watch from Gary Priests web site.

This is only a beta version but I like it already. It allows you to look at your mail box and delete or retrive at will. It will even allow you to view part of the message before you decide. Nice one Gary :-)

The best reason for using this program IMO is that it neatly side-steps the problem with Newsie and Demon Internet users. I really like John's program so this is a boon for me and I think a number of other users also.

Visit Gary's site at http://www.the-gap.demon.co.uk

Keep up the good work lads.

1132. Toad's new WEB pages

Newsgroup: comp.sys.atari.st
Date: 1997-04-19 00:00:00 UTC
From: molin@smurfy.tcimet.net
Message-ID: <molin.861471713@smurfy.tcimet.net>
Source record: 123586

I see Toad has completely revamped its web pages, and near as I can tell the _ONLY_ reference to Atari is on Dave Troy's personal page. Unless I'm missing something, I'm getting the distinct impression Toad has abandoned Atari users altogether.

About 4 weeks ago I ordered a GEMulator from them, and was told that it would take about two weeks as the required version of Magic was not yet available. I've been checking the web site and sending e-mail almost weekly and can't even get a reply back. (Yeah, I know... I'll call them voice.)

Is Toad's Atari support down for the count?

l> exchanged? Thanks a lot for helping!

You only need 5v and 12v. Your best bet is to search out and old PC and
remove the power supply. You could try PC service shops - they throw away
things like this :)

Yes, the messages should appear on the screen, what I pointed out is
that pppd says it's trying to connect ppp0 to /dev/console! This has
absolutely nothing to do with syslogd outputting messages from pppd to
/dev/console.

>It actually looks quite normal.
>Once PPP is operating, you just change the output device
>from '/dev/console' to '/dev/null'.

Again, this is the messages from syslogd, as specified in
/etc/syslog.conf.

w> is it for?

The previous owner has set this up as a special partition for use with the
MiNT XFS file system. It is incompatible with the TOS file system which is
why you can't access it.

If you are not going to use MiNT you can get the partition back by "zeroing"
it using ICD or similar utilities.

There are several good Notation programs available for the ST.
Unfortunately most are out of business. DR. T had several excellent
programs called "Copyist". Encore also had a good notation program.
Steinberg's Cubase Score is also very good and still available for the
ST line.

Musically,
Terry Cano

Okay...I'm a lot closer now!!!

I took someone's advice and cleared out the .acc and auto .prgs down to the bare minimum, and it appears as if I'm able to make a connection by running the connect.scr. I ran the three programs the docs suggest, and my output matches what the author says it should when he's connected.

But, CAB doesn't seem to work. I try opening a URL and I get the following:

1. Cab says "resolving host" and a few seconds later the transmit and receive lights flash, then nothing for about a minute

2. A dialog box comes up and says "Read error in G:/wwwcache/b/00000001" and the cab window says "Path not found (Error #-34)

BTW, I found no 00000001 file in the b folder of wwwcache.

AND when I type an IP address directly as part of the URL, Cab says "connecting to host" and then everything just freezes up. The mouse moves and the modem transmit light blinks every so often.

I'm miles ahead of where I was yesterday at this time...Can anybody out there help me out again??

MUCH TIA,

> Does anyone know? Can anyone help?

I think it's just standard unix mbox separation, using the 'From ' line
at the top of each mail header.

FYI, the MTA that Demon use, MMDF, uses four control-A's between each
message, ie. ^A^A^A^A. Those are the main two mail separators in use.

>them voice.)
>
>Is Toad's Atari support down for the count?

It would certainly seem so... I just got the latest "ST News" from them and
its nice but Dave Troy states that their just isn't anything new. You know,
I have a problem with that. Why not go out, be aggressive, and find the new
software/hardware that -is- out there? I mean reports on WebSpace, Oregon's
new browser, the new version of Diamond Edge thats supposed to be coming,
the new clones from France, Nemesis, latest updates on the Titan/Expose
problem with NTSC Falcons, CAB 2.0, German games for the Falcon (like
"Running")(BTW, has everyone played the RUNSHAR1/RUNSHAR2.ZIP demo yet? Its
bloody brilliant as our UK friends would say!), games like Road Riot 4WD
for the Falcon that I've seen listed in other dealers inventories... Toad
used to be the 1st/best place to check for everything Atari...Sad to say,
its now one of the last for me... :(

PS As you can see, its not a lack of hardware/software,
but timely news and information about such! :)

>I've tried finding out using NOS but NOS just bombs on me these days :(

NOS just downloads the Unix mailbox file. The only clue to separate
one email msg from the other in that file is the `From ' line. It's
stupid, but some Unix things are surprisingly stupid.

If you are looking for code to extract the individual messages, try an
Atari port of elm.

Surprise! I'm also a registered CoNnect user, and when I registered, I noticed that the key you send in to receive the "unlock" key from them (in my case System Solutions, UK) is based on the configuration you're using at the time you send that info in. Since I already had MagiC4 up and running since I registered and that I always use CoNnect under it, I have not had you're problem.

You'll notice that the registration menu has several key fields, and I assume that's to accomodate the different setups you may use. And from what I understand, "they" have to supply you with a different key for the different setups you use!

Pretty crappy I say, for a program that cost me 80 British pounds!!!

BTW, there is another version of Connect, called "coNnect 95" which is the updated version, but it's only available in German. Boo. Hisss.

Let me know what develops, I'm honestly curious!

Inddeed, many people find that Ataris do exactly what they need though,
don't upgrade for upgrading's sake.

> I agree with others that, if you have to get a non-Atari machine today to

This is untrue, Mac sales are rising, market share is increasing. Mac
support isn't as great as Windos but it is far from being on the way
out, it is continually getting stronger.

Hi All,

As we all know fragmented HD's can cause all kinds of problems ;)
There is an excellent freeware program called Optimizer that works
great on my 810meg IDE Fujitsu and EZ Drive 135. The version I use
is 2.6 and Hans-Peter, the author, says there is a v2.7 on Maus-Net
in Germany(couldn't find Maus-Net). This program can defrag my
eight partitions in a minute or so :) I've used this program, v2.6,
with no problems or loss of data. You can optimize all partitions or
individually. Highly recommended. Where is it?

ftp://ftp.uni-paderborn.de/ftp/disk4/atari/tools/hd/hp_opt26.lzh

Danke Hans-Peter =)

There are still people out there who hasn't seen the light yet...

>ET4000 VDI compatible !

Isn't CAB that? It works perfectly in hicolour on my Falcon, so I
can't see any reason why it shouldn't work with a graphics-card. On the
contrary, all well-written programs shouldn't have any problems, a
special "ET4000 compatibility-mode" looks more like a hack than clean
programming to me.

My guess is that there is something in your autofolder or an
accessory that's incompatible with MiNT/MiNTnet/pppd somehow. A
complete list of your autofolder-programs (In unsorted order!) and
accessories would be very helpful.

>I then attempt to turn on the message log, and tried to connect again. Same

>Apr 18 15:45:02 homer pppd[10]: Connect: ppp0 <--> /dev/console
^^^^^^^^^^^^^^^^^^^^^^
What?!? You're trying to establish a ppp-connection with your
screen!! (Unless the PPPKIT does something really weird...) The
correct device should be /dev/modem1 or /dev/modem2, depending on what
machine and serialport you use.

>Apr 18 15:45:32 homer pppd[10]: LCP: timeout sending Config-Requests <29>

pppd couldn't establish a connection. No wonder, unless you're so
familiar with the protocol that you can type the responses manually :-)

>and BTW, how does GlueStik fit into all this???????

It's a utility that emulates STiK in a MiNTnet-environment. The two programs
gsdaemon.prg and gsdriver.exe should be started from mint.cnf.

Tis true the latest industry stats show Mac market share up 2% and PC
down 2% IIRC. Apple's mac slaes are dropping but the cloners are keeping
the actual number of Mac sales rising. I honestly don't think Apple
will ever go down the worst should be over now and Oracle is desperate
to buy them out and I'm sure many other companies sucha s Motorola are
interested if the worst comes tot he worst, the cloners will still
continue if Apple doesn't.

I believe that STalker handles all the serial port and zmodem internally; all you need is serpatch2 for your machine. Have you tried with just STalker and serpatch? I use just STalker (no serpatch - I have TOS 3.06 in my main machine, and 3.01 in this one; but I forgot to put serpatch back into this one when I started using it online.) I haven't had any trouble with internet downloads.

There is at least one accessory (caller id from Paul Lyon) that leaves the serial port (or the modem - I couldn't say which) seriously messed up for STalker, pretty much as you describe; do you have anything like that running? Also, you might check your modem init line in STalker - I've seen some weird ones. I use atx4q0 as I recall; I don't know where it came from, but it works here with my Supra modem. Atz is more common, though.

I was on Atari Central yesterday testing CAB. It looked
the same as it has for over a year:(.

I have been waiting for latest NVDI for MagiC Mac for about
four months now. They accepted the order and said it
was in, but then changed their minds and said only the
full version was available and they couldn't upgrade
mine. They got the cash and disk, won't reply to e-mail,
their online order status checking didn't work with the
order number and the geek they have working on the phones
just keeps saying it's not in yet. A turd could have floated
from the UK faster than the service they are currently
providing. Sorry, but even with the Troys advanced statement
concerning their lessing presence in the TOS market, they
still should at least carry on with orders they accept
money for. Christ, how long does one have to wait?
Their just lucky my damn Mac is on the blink and I am
having to suffer with a Falcon and a NOVA card for decent
resolutions:).

Mike

P.S. Sorry for using the term geek. I should say the person
who is ignorant of all matters concerning TOS software and

hardware. I'm mean "what's a PAK 030" is a pretty stupid thing
to say for someone who works at Toad and is allowed on the phone.

1174. Neocrome Pics to .BMP, .GIF, or .JPG?

1175. POPwatch - BETA 0.15 available

Newsgroup: comp.sys.atari.st
Date: 1997-04-20 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <32673406_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 123617
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

POPwatch (BETA version 0.15) is now available from my website (see .sig).
In case you don't know, it's a tool for use with STiK and a POP3 mailbox,
and allows you to check, delete and retrieve email (into Oasis2 and NEWSie).
It even has a Kill File facility.

Cheers, Gary

POPwatch BETA version changes/bug fixes.

v0.15 20/04/97
*Improved multitasking. POPwatch will now respond to window events
whilst retrieving headers and downloading emails. Thus you can now
iconise it or move the window whilst downloading large emails.
It checks for a window event after downloading every 2K of data.
*The status bar now shows how many bytes received against total of
bytes for the current email being received (in blocks of 2K).
So you can see how the retrieval is progressing.
*Retrieval successful message now shown in status bar at end of
retrieval.
*Killed emails are now displayed in red.

v0.14 19/04/97
*Add to Kill File facility now implemented.
*Killing on From and To addresses now actually works.
*If no password is specified in current preferences, then one is
requested before connection continues.
*No longer crashes with a bus error if STiK is not installed.
*Improved handling of the all input fields. No more spurious left over
characters in the fields (normally a result of using the ESC key).

Oops, sorry about that! You're not really being misattributed, though - it
just looks from the quoting like your name was left in by accident (which it
was).

>As for making sure an "empty" table cell prints out "depressed" instead

Didn't know about that one, but I don't use " " if I can possibly
avoid it as it shows up as exactly that in older browsers.

Yeah, apparently so. I just checked out their site. They have gone strictly the ISP and related equipment vendor. Makes sense business-wise. The net is hot and underserved in many areas of the country. Gone are the days where a small computer store can compete - especially an Atari dealer!

Atari is past its prime and has been since '92. I'm glad that people are still coding for it and even selling their wares but face it, its days are long over.

It's that horrible filesystem from Windows95 that allows long filenames. It's a hack, and it's unreliable. Even MicroSoft has more or less abandonded it in favour of their new 32-bit filesystem.

MagiC 5 supports it directly, but I wouldn't recommend using it. I tried it a couple of times and it trashed the test-partition beyond repair. And you can't use tools like Diamond Edge on a vfat-partition either.

It's nice to have if you want to exchange zip-disks or similar with PC's, but don't use if you don't have to.

There's a problem with the nameserver (DNS). Check that the
DNS-address is correct in resolv.conf.

>2. A dialog box comes up and says "Read error in G:/wwwcache/b/00000001"
>and the cab window says "Path not found (Error #-34)
>
>BTW, I found no 00000001 file in the b folder of wwwcache.

That's because CAB expects the overlay (CAB.OVL) to fetch a page on
the net and save it to a file specified by CAB. In this case, the
overlay couldn't find the page and the file isn't created.

>AND when I type an IP address directly as part of the URL, Cab says
>"connecting to host" and then everything just freezes up. The mouse moves
>and the modem transmit light blinks every so often.

This is a well known bug with the CAB-overlay for MiNTnet, and except
for pathcing it yourself there's nothing you can do. THe solution is
to run GlueSTiK 0.02b4 and CAB.OVL 1.18 or 1.20 for STiK.

>I'm miles ahead of where I was yesterday at this time...Can anybody out
>there help me out again??

I would have a look at ppprc or /etc/ppp/options. Somewhere in one of
those files the device should be specified. From the log you included
in a previous posting it looks like no device is specified and ppp
tries to connect to /dev/console. This would explain all your
problems.

Here's my .ppprc, have a look at it and your files (ppprc or
/etc/ppp/options.) and see if you can figure it out.

```
lock # Lock device so nobody else can use it while online
connect "/usr/etc/chat -v -f $HOME/.chat-script" # Connect using chat
modem # Tells pppd to use the modem control-lines
crtscts # Hardware handshaking
passive
defaultroute
asyncmap 0x00000000
# Modem 2 mit 38400 Baud
/dev/ttya # Important! This specifies the device that's used! Should
# be your modem-port! (/dev/modem1, /dev/modem1,
# /dev/ttya, /dev/ttyb... Look in MINT.CNF to see if modem1
# and modem2 is renamed to ttya and ttyb.
38400 # Speed, 38400 is max. without a patch.
```

Hi Jo!

I understand that System Solutions are due to bring out an English version of Texel V1.59 shortly. Some weeks ago I was asked to quote for a translation and did, but it apparently wasn't accepted (I haven't had a firm rejection but know they wanted to bring it out for the Atari shows in Birmingham and London next weekend, and I haven't heard more after the owner said he would have to consult the German producers). A pity, as I had done a lot of the work in preparation....

Regards
Peter

1190. Re: Looking for TEXEL and That's Write

I have been waiting months for the English version of Texel, but I think the problem is not the English but the Lotus and Excel import/ export. That is one if its advertised features and apparently still needs work. If anyone knows who the publishing company is perhaps some email could clear up the questions about the delays.

Friends!

OK I got Katherine Ellis's install guide and did what she asked...

However, I rebooted before I installed the Mint files...

Now I have two problems...

TOS could not read the MINUX partition on Drive D...

And the install program now dies with the message "Cannot find
directory 172343" when it tries to install the RAM disk. Where does
the install program keep the information that it was installed once
before...?

Thanks for all your help!

>Where can version 1.18 be found? All I can find is the latest version...

Ditto.

So far I've been told to stop running 1.50 and use 1.2(0/1) and 1.18.
I seem to have a copy of 1.10. I'm willing to try them but it would be
great to be able to find them somewhere. Anyone got a collection.

I'll be willing to put these on the TAF page if others need the files.

(P.S. Ken, Yes I will add the Interlog information on the TAF page)

1193. IRC channels for Atarians?

Newsgroup: comp.sys.atari.st

From: dreibel@idirect.com
Message-ID: <335a63f4.0@lagoon.idirect.com>
Source record: 123635

okay, I've finally figured out how this IRC business works and have now begun to get to grips with ATARIIRC (a real nice program, BTW).

My question is now what channels should I be logging in on to talk to some of you fellow Atarians online? I'm especially interested in "speaking" to some of the people in the UK and Europe like Frank Charlton.

The channel that I can log onto that you may be able to find me is ird.direct.ca if you'd like to try it out. I'll try to be on around midnight EST North America, and I'll be in #atari.

Please e-mail me (I'm also trying out POPwatch to see how well it works - can't wait for my first spammer :)) and also post here so that others can benefit from your advice.

_Dan

That's intended...
The Minix-FS-driver "cheats". It creates the partition with a root sector
that lets TOS think that the partition is full but contains no files...
Actually this is configurable when you create the partition. You must have
typed "y" when you were asked if you like this behavior or not. However,
if you have MiNT running, you can change it back. Simply type "minit" and
minit will tell you what options it recognizes.

1197. Spreading the seed of Net Access

Newsgroup: comp.sys.atari.st
Date: 1997-04-20 00:00:00 UTC
From: Peter Ross <eonicman@erols.com>
Message-ID: <335AAA26.1A33@erols.com>
Source record: 123639

For those that are on the internet with their Atari's, it may be a good idea to post up signs in your grocery stores, laundry mats and libraries that suggest that Atarians (ST or Greater) looking to get on the internet contact them to receive a free copy of the software setup (be it WWW 1.4 or PPPkit) if they bring their own disks. There are hardly any available magazines or BBS's for most people to realize that they can get on the internet with their Ataris (at least this is the case here in New York City). The kit should be enhanced to ask the user if they would like to go online and register their access so that we can get a better idea of how many Atarians are on the Net and which kind of system they have (including if they are using Atari emulation), what supplier they are using, whether or not it is SLIP or PPP. The configuration file for services not currently listed could be uploaded by e-mail and included in future releases of the WWW pack thus making it easier for future Web Surfers. Just an idea.

Tellingly, STF never put any of their coverdisk giveaways into their BBS
file-lists for that reason.

That said, Leigh's idea of going back to the publishers and asking seems to
be the best and safest way around things.

B) TOAD'S NEWSLETTER HAS BECOME A PC GEMULATOR LIST, ASSIDES FROM THE FEW C-LAB FALCONS THEY STILL SELL.

This is evidenced by their recent mailings. While I *do* realize that Atari Corp. is virtually dead, the machines they once sold, as one can clearly see here, are far from dead.

Yet, Toad are not only steering their mailings towards PC cards, they are also clearing virtually all the pure Atari stuff they've got left. Even rare comodities such as the ATARI COMPENDIUM CD are now slated fro deletion, as they are presently clearing those for the ridiculous amount of $10...

FUCK THAT! TOAD DOES _NOT_ DESERVE TO OWNM THE ATARICENTRAL.COM DOMAIN IF THEY ARE DROPPING THE MARKET!!!

This is untrue, Mac sales are rising, market share is increasing. Mac support isn't as great as Windos but it is far from being on the way out, it is continually getting stronger.
****

On what do you base the above? Apple just laid off a couple of thousand employees. Not long ago, they had to write off several hundred million dollars worth of product because it was sitting in warehouses not selling. Now, they've just bought/brought Steve Jobs back into the field, at a cost of $400 million in a desparate attempt to come up with an OS that will be better than Windoze 95.

Leaping from Atari to Macintosh will result in the same anguish and frustration that Atari users felt (at least this atari user). I bought two falcons for my business, only to find out there was no more support unless I wanted to ship the machines several hundred miles.

At least with Windoze there's plenty of emulators to satisfy that lust for the cute and quirky :-).

Hi!

I'm looking for the following hardware & software for a 520ST:

Color Monitor
Switch (to go between color & B&W monitors)
Hard Drive
Modem
Joysticks (2)
Superstar Ice Hockey by Mindscape Inc
Other Hockey game software

I'm trying to complete a system for my teenage daughter as a birthday present. So if you have part or all of the above for sale, I would gladly entertain your messages.

I'm located in Nova Scotia Canada and would prefer buying from somewhere in Canada. That way I don't have to pay exchange or customs. However, if the price is really good, I'll consider purchasing from the good old US of A.

Thanks,

Hi Malcolm,

Is that an open offer, to Email CAB.OVL 1.20h to those needing it?
Actually, I've been fairly successful with v1.18 and not at all
successful with 1.21. Unfortunately, 1.20h appears to have been
dumped everyplace I've looked/searched.

If you wouldn't mind adding one more person to your Email, I
certainly would appreciate the effort.

Thanks a lot,

My band and I need a 14meg Falcon w/timing, etc. fixes with Cubase Audio 2.06. This will be to augment the one we have already. A monitor is not a must, but audio production extras would certainly sweeten the deal. Please e-mail to guitarmn@execpc.com or post here (I do check). Thank you.

Source record: 123531

I have an Atari 7800 for sale or trade. I would sell the PKG for $ 75.00
ot trade for an Atari ST 1-meg and floppy.

must have RF as I don't have a monitor.

I have the following.

Atari 7800 no box but complete.

7800 games all have box & docs except Pole Position II

1 on 1 basketball
TD football
Tower Toppler
RS Baseball
Ms Pac-Man
BallBlazer
Hat Trick
Xevious
DK
DKjr
Pole Position II
Asteroids

2600 games loose

Kaboom
Frogger
ET
Pac-Man
Vanguard
Space Invaders
Combat
Defender
Jungle Hunt
Joust
Pitfall

Buyer pays shipping (aprox 8-10 dollars) unless we are trading. NO COD
only money order or trade.

Hello folks,

I just have a problem with my shitty joystick and would like to buy
a better one (or two). Actually, I'm looking for the good old KRAFT
joysticks. Does anybody know if there are still stores that have these
kind of joysticks? (I'm asking mainly german ST users, for this kind of
joystick is from Germany, but if you know anything about it, please contact
me...)

Cheers,

Sebi a.k.a The Hidden

> Hard disk write 102.43 43%
> Hard disk read 22.71 98%

Ehh... isn't this a bit strange? Isn't the test compared to
a TT _with_ NVDI? So a 16MHz 68000 MegaSTe is almost as fast as
a 32MHz 68030 TT and even faster in some tests????

I would better try Nembench. It's the only CPU benchtester I
would trust. Okey it doesn't test the performance when it
comes to screen output but if you only want to test the
CPU power it's the best there is. I do also belive that
the latest version does work on all TOS machines as the
DSP test is now a seperate program.

:-) The thing is that noone has tried with more than 64MB so
I can't promiss that it will work. I have heard though that
the new cards will handle 128MB, but don't count on it.

Throw WERCS in the trash. :-)

Seriously WERCS is crap. I have heard that there is a new free(?)
RSC editor which handles everything including colour icons. If
it's not usable there is Interface which is the best I have ever
seen. Not perfect but defenitly the best you can get.

If you must use WERCS I guess you have to design your resource
files using TOS. :-\

Dynamics of Germany produced an excellent joystick called the Competition Pro,
and clones of it for other brands. I'm not sure if they're still around but the
Pro was very popular in England and I bought a clone of it about a year ago (but
the shop has since closed)

Joe Kearney (tuf@cyberspy.com) wrote:
:
: Both machines, without adding additional hardware (key phrase here),
: provide a stereo in and out. Cubase VST provides every feature of
: Cubase Audio on the ST, plus all the amenities (wonderful color, audio
: enhancements, real time effects, etc). Both machines, lets say a
: Falcon w/14 megs ram and a 500 meg hd vs. a Powermac 6100 16/500 cost
: roughly the same. In my mind there is no contest.

Joe,
For starters...you can't run CuBase Audio on an ST...
Next, you can easily add a whole lot more analogue inputs/outputs to
the Falcon...as well as SPDIF. MIDI is integrated. You can choose from
at least three types of monitors straight out of the box...ranging from
ST monochrome, to VGA, to really high end RGB.
Beleive me...I know how much better "TODAY'S" Mac is than the
!!!1992!!! released Falcon. I wanted a Mac...but for a lot less cash I
got a Falcon, 16 digital tracsk at CD quality, Scoreing, sequencing, and
much more. It'll all run in less than 4meg of memeory. You've gotta keep
in mind though...I got my Falcon back when a dang Mac SE cost over a
thousand dollars...with no hard disk, and a tiny little 9" monochrome
screen! All my pals at the university laughed at me for buying a Falcon...
they all got SEs running MOU junk...we'll...I'm still using my falcon to
do over half of what they do on there "NEW Power Macs".

Brian

Tellingly, STF never put any of their coverdisk giveaways into their BBS
file-lists for that reason.

What then,Harry,were all those downloadable cover disks that were
on Ad Lib BBS ? IIRC they were under the heading of ST Format
Cover Disks but I certainly stand to be corrected if I am wrong.
I do not think that the Wonder Disks were on the files though.

A further point that comes to mind is that most cover disks were
provided by a third party and not by the magazine itself,so if
you had a bad disk it was returned to them and not the Magazine
thus making it a little awkward to control. Again if the disk was
missing from the magazine on purchase the shopkeeper always
seemed to have a couple of spares.

Hi cpb4@ukc.ac.uk, on 20 Apr 97 you wrote:

c> I'm afraid the Megafile problem is probably only fixable by leaving
c> the drive on permanently or replacing the drive (either the mechanism
c> or the whole thing; hard disks are terribly cheap these days).

True, and 30Mb doesn't go far nowadays.

However .... I have fixed a drive in a state like this by taking out the screws securing the PCB on the underside.

Lift the PCB carefully - just enough to get at the spindle under the earthing spring contact on the PCB.

Run as much light oil as you can get on the tip of a pin around the spindle.

With pliers or rubber friction pad turn spindle to ease it from STUCK.

Re-fix PCB. Bingo.

OK, OK, I know some people will wince at this but one device I inflicted this on has carried on working for a couple of years (and is still going).

I would always say that Papyrus is as about the best WP you are going to
get if you want fancy fonts etc.

Protext is good, but relies upon your printer's fonts.

Is there anything else that isn't really a text editor?

Best wishes
Mike Kerslake

Yes Ad-Lib did put STF Coverdisks up for downloading, one of the
reasons I decided to ask the original coverdisk/copyright questions,
but I presumes from Harrys comments that I had got something wrong?

> Cover Disks but I certainly stand to be corrected if I am wrong.

: | Given the virtual disapearance of computer stores carrying Atari
: | computers, I was asked by fellow club members to assemble for us
: | a collection of service manuals, for the ST/TT/Falcon line Atari
: | once manufactured. Specifically, detailed data is needed on your
: | Stacy and TT030 models' architecture and on upgrading procedures
: | for memory and TOS chips and on fitting internal HD controllers.

I would imagine that Mr. Skrutch is trying to say that he doesn't have the
information that you are looking for. Please understand that Atari left
the personal computer market several years ago, and probably did not go
out of their way to hold on to much of the documentation related to their
computing line. Atari's only interest in their old business is probably
their patents and copyrights.

I'm not sure that he was as tackful as he might have been, but it sounds
like the manuals you're interested in were discarded years ago. B&C
Computervisions or Best Electronics probably have what you're looking for.

>files in and plays them, without all the overheads of recording/notation
>etc etc. The faster they load the better - I can set up a ramdisk to
>hold a few files.
>
>Any help would be greatly appreciated!

I knew some guys who used to use the ST in a live gig situation for
playing .mid files. They had it set up in such a way that after each
song they would load in a *dummy* .mid file containing little or no
data. They reckoned the next (real) file would load in much quicker. I
guess the idea is to clear out the ram before each new song.

Please understand that I have not tried this myself so it may be
complete bollocks for all I know! Anyone want to comment?

Yeah, sad as it is... But as long as I can still get the Internet
along with gobs of Atari software and support,as long as European
companies make TOS compatibles which put Atari's machines to
shame,and as long as a certain Canadian makes Pentium cards for those
machines :)...I'm still an Atari ST perrson. Look at the people who
'still' use 8-bit Atari's for pete's sake! :)

As for Toad's Ataricentral, I like it. It even covers other Atari
machines like classic game systems and 8-bits. Sad thing is, their
just links to other Atari sites which I can find using Alta Vista...

Just a quick update....

I have been extremely busy in the last few days, so have been slow to respond to all my email. Just in case I missed anyone (I haven't counted, but I think I got at least 30 replies to the above post), here is the info I have already replied with to respondants:

****
Wow. I am amazed at the number of email responses I got to that rather undetailed trial balloon message I left on the
usenet! :) I am writing one response and sending this out to everyone that responded.

This TT030 has no monitor (I was using a regular SVGA monitor with it before, it was fine). It has a 300 meg
(quantum?) scsi hard drive, 2 megs of ST RAM, and 4 megs of TT RAM. The floppy drive *DOES NOT* work.

Calamus SL, Geneva, and Straight FAX (I *think* I have the disks to all these, I know I have the boxes and manuals
anyway!) and possibly some assorted games can go with it. (I have to

dig around in the closet and find what i have that
is still intact.)

I really don't know how much this stuff is worth, I will take the best
offer, buyer pays shipping.

For those of you who asked, I am located in Bergen County, New Jersey.

****

Oh, its TOS 3.06 I think (*mutter* I will have to hook it up and see).
I would advise that if you are interested in purchasing still, make sure
you can get the parts and/or physically know how to fix the floppy
drive. I don't want anyone to waste money on it and find out it can't
be fixed:(

And btw, I am so glad to see the Atari community is still going
strong:) My husband Andreas used to write for Atari Explorer Online,
and I even donated an article or two here or there! I miss those
tuesday night conferences on Delphi...

If Travis Guy or Bob Brodie are still out there lurking somewhere, we
would both love to hear from either of you!

I've actually done something like that too, but a bit more generic
one. With it one can select put in configuration file what lines
shall be commented out, and what not. So for example I could turn
'GEM=' line off and 'INIT=' on with a few keystrokes.
It's pretty nice for me because I usually use different
configurations, still having most of the mint.cnf same between
the configurations.

1247. games for sale - UK

Newsgroup: comp.sys.atari.st
Date: 1997-04-22 00:00:00 UTC
From: Nick Drage <nickd@smartways.com>
Message-ID: <335CE321.1E15@smartways.com>
Source record: 123481

Hi.

Following Atari ST games for sale:

Company Game
Rainbird Midwinter-Masters of Strategy
Computer Concepts Fast ST Basic
Computer Concepts ST Basic
Rainbird Midwinter II - Flames of Freedom
Gamestar GFL Championship Basketball
Gamestar GFL Championship Football
Microdeal Tetra Quest
Microdeal Karate Kid Part II
Melbourne House Xenon
Spectrum Holobyte Falcon
Spectrum Holobyte Mission Disk Volume II
Spectrum Holobyte Mission Disk Volume I
Rainbird StarGlider 2
Ocean Robocop
Mirrorsoft TV Sports Football
Anco Kick Off 2
Firebird Whirligig
Gremlin Lotus Esprit Turbo Challenge
Image Works Speedball 2 - Brutal Deluxe
Image Works Xenon 2 - Megablast
Palace Dragons Breath
Ocean F29 Retaliator

Make me an offer for whatever you're after. As well as money I'm after a working copy of "Sundog" - does anyone have a copy they're willing to swap? Or even to sell?

Please email me directly - simply don't have time to read this newsgroup and my news-server junks email after about a day. So I'm don't come here often, which is probably why you're all going to flame me for posting this advert......

cg> relatively cheaply anywhere else?

Technically it's licnsed software, but is freely available with any program
that's licensed to use it.

To get it seperately, you can get it from the FaST Club who are licensed to
distribute it.

cg> Also, is it really possible to run GDOS with one floppy drive and no
cg> harddrive, having the auto folder, fonts etc. on the same disk as the
cg> program that requires GDOS?

I guess so, but there won't be very much room for the fonts. How big's the
program that you want to use GDOS with?

I use Superboot with seperate mint.cfg for each setup (I have 3,
XaAES, oAESis and Mint/gem). it copies them about and runs the right
one every time. you can even cut out ACC's and Autoboot prgs that
don't like the particular OS that will be run. and with a little
fiddling I got it to set which Mint extentions to run as well (you
don't need Moose to run with oAESis).

I have now closed the PaCifiST Collection page that housed quite a few up to date titles for downloading in images ready to use on the emulator,
This is because,Even though it generated over 700 Visitors in a very short period only one person emailed me and that was a complaint :)

The only incentive for a web page is feedback I think ? so its gone, please adjust any bookmarks you may have...Thanks :)

>
> It was made freeware IIRC

I like this news. But, where is the final freeware version?? I have v2.34, which does not allow printing. I got it off of hensa.

Secondly, if it is freeware, why is there a note in a lot of the programs off of hensa included in a list which tells you how to register the shareware program(Marcel is on the list). Are they falsely collecting money(no flames here, I am asking for an answer, so I can proceed correctly).

Thanks for your help.

: lifeboat drill sometime. You are speaking about computers that were
: discontinued over 5 years ago by a company that now has 3 employees.
: A little late, don't you think? Good luck.

Just because Atari Corp management is so incompetent and the laughing joke of every computer and video game company, doesn't mean we still don't like using the machines. Yes, Atari stopped making home computers a long time ago...because they can't keep up with the current edge in the industry. Neither can Commodore, they both were so concern with beating each other in Europe that they failed to see that PC's were set to dominate America...and the world.

You want to talk about the Titanic, reason it sank is because the captain refused to see the dangers up ahead and steer clear. Years later, Captain Tramiel sank the S.S. Atari off an iceberg that is called 'customer support'. Any company that has such hindsight driving it does not deserve to be in business and you can tell Mr Skruch that.

>Yet, Toad are not only steering their mailings towards PC cards,
>they are also clearing virtually all the pure Atari stuff they've
>got left. Even rare comodities such as the ATARI COMPENDIUM CD are
>now slated fro deletion, as they are presently clearing those for
>the ridiculous amount of $10...

Yes I was PO'ed about Toad not caring any more Atari stuff...but what else can they do? I suppose if they wouldn't carry the PC lineup at all, they would be like B&C and other mail order stores that exclusivly carries the Atari lineup. But the same thing happened to a computer store in my area that once sold ST's. Atari ripped them off and treated them like dirt like all others(see above).

Eventually, they cut down their ST section to virtually none except for the magazines and they too disappeared. I heard the store clerk say if it weren't for their PC's, they would not be able to keep afloat because of Atari. And when those jackels pulled the ST's to make room for the Jaguar(a bigger diaster than the Falcon), the clerk was upset and depressed over the whole ordeal. So I'm not blaming Dave Troy for trying to keep his business going despite of those who are now known as JTS (Jerkboy Tramiel Sux)

You want manuals, serch the 'other' Atari providers. Subscribe to Current Notes because they carry ads to those places. If you can't get anything from Toad, so what? What's the worse that can happen...you can't place an order with them?

The only reason I shall stick with Atari ST's for a long time is not because of excellent software and OS, but because of the community spirit that hardly exists on other platforms.

Even if you DO end up buying a PC comtemptible,so what? At least you can run Gemulator and PacifiST on it :)

I would imagine that Mr. Skrutch is trying to say that he doesn't have the
information that you are looking for. Please understand that Atari left
the personal computer market several years ago, and probably did not go
out of their way to hold on to much of the documentation related to their
computing line. Atari's only interest in their old business is probably
their patents and copyrights.

Well, if they're not gonna release anything further for the TOS
line, then they should simply waive any right to licensing fees,
and furthermore release the sources to everything Atari including
C sources to XCONTROL and MultiTOS, possibly producing it as some
CD-Rom with everything they ever released, plus the C sources, as
well as their developpers kits.

Finally, the Tramiels themselves should include with the CD's liner
notes an authorization to freely distribute Rom images, just out of
courtesy to those who still want to maintain the TOS platform. This
would include releasing the TOS 5.00 version intitially developped
for the Falcon 040 Atari was supposed to release in late '93.

I would agree that is exactly what happened, It would be very
doubtfull that they stock any manuals regarding ATARI, but the
original poster asked in a civilised manner and should have been shown
an equal amount of civility ?
What company merges/takes over or whatever? another comapny, then
treats that companies loyal and long standing customers in such an off
handish way? hardly good PR?

Sorry but for me, spending most of every day at my ATARI making
software for the ATARI (It does not matter wether its good or bad
software) and then have some fool who probably would not recognise a
ST if it bit him on the bumb tell the whole world that its too late?
well it deserves a response and no excuses for a guy thats probably
being paid thousands of dollars a month, to redicule a whole computer
community?.........

Lets not get carried away here (like I am<G>) but I do feel he needs
it pointing out to him that there are a few of us here? and that can
only be done if a few of us take a few seconds to let him know !

I HAVE!

Has anyone else :))

Thanks for posting your results. My program is not designed to be a
replacement for Gembench, but it did do what I expected on your machine.
The screen output tests are faster mainly because of running in
monochrome. I will compare your test results to my TT in ST HIGH and
post the results if you like. The 16Mhz just about doubled the
performance of my stock Mega which does the math tests at about 35% of
the TT. Also, my friend's TT/TOS 3.06 is slightly faster than my TOS
```

3.05 TT. Finally, the string search test shows how slow some operations are still going to be on the 68000. I wrote this program to test more than just raw CPU speed and Gembench couldn't give me that.

Message-ID: <335C598F.6798@ufrima.imag.fr>
Source record: 123535

Hi !

Yes, it is possible, but tricky.
My way of doing that is:
- 1 disk called BOOT with all ACCs and AUTO, including GDOS or
equivalent, and ASSIGN.SYS, having drive B: for fonts path
- 1 disk called FONTS with all fonts. This is drive B:
- as many application disks that you want... This is drive A:

you'll have to change disk BOOT to disk A: in drive A: as soon as you
are on the desk.
you'll have to change disk A: and B: each time the systeme asks for it
(if you have only one drive)

BUT (best), if you have (I would say...) at least 2Mb of memory, you can
put a RamDisk on drive BOOT (my choice is M-Disk, excellent ACC), load
the FONTS disk on it (easy with M-Disk), and change the path drive to
that of the RamDisk in assign.sys

Enjoy the fun of it all and pardon my mistakes with english,

Yves Gablin.

Hello Again!

Yes it seems that it is better to install from a floppy...

However, I am still having proplems...

The install program always dies part way through the process, with
a message that there is a memory fault, always in a different
place...

Do I need more memory to really install this program?

How about If I use the basic install, then use GZIP and TAR?

If so. how do I use them?

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. I have been in
business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted (also, please check out my want lists,
since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

To reserve any item(s) listed here, please do the following:

1) carefully read the SALES CONDITIONS section first,
2) send me a list of the items that you are interested in,
3) include your full postal mailing address (this information is
for internal VGA use only)!
4) I will reply with a shipping information message for your order.

Thank you!

1271. POPwatch BETA 0.16 (now with NOS support) available

Newsgroup: comp.sys.atari.st
Date: 1997-04-22 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <75931572_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 123542
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

POPwatch (BETA version 0.15) is now available from my website (see .sig).
In case you don't know, it's a tool for use with STiK and a POP3 mailbox,
and allows you to check, delete and retrieve email (into Oasis2 and
NEWSie, and as of this version NOS/Oasis1).
It even has a Kill File facility.

Cheers, Gary

POPwatch BETA version changes/bug fixes.

POPwatch BETA version changes/bug fixes.

v0.16 22/04/97
*NOS format retrieval now implemented. ie. for use by NOS or Oasis1.xx
*Should now hopefully work with GlueSTiK.
*Retrieval message fixed when retrieving part of message by double
clicking on it.
*No longer causes division by zero exceptions.

v0.15 20/04/97
*Improved multitasking. POPwatch will now respond to window events
whilst retrieving headers and downloading emails. Thus you can now
iconise it or move the window whilst downloading large emails.
It checks for a window event after downloading every 2K of data.
*The status bar now shows how many bytes received against total of
bytes for the current email being received (in blocks of 2K).
So you can see how the retrieval is progressing.
*Retrieval successful message now shown in status bar at end of
retrieval.
*Killed emails are now displayed in red.

v0.14 19/04/97
*Add to Kill File facility now implemented.
*Killing on From and To addresses now actually works.
*If no password is specified in current preferences, then one is
requested before connection continues.
*No longer crashes with a bus error if STiK is not installed.
*Improved handling of the all input fields. No more spurious left over
characters in the fields (normally a result of using the ESC key).

Well they will probably not be around very long anyway. I have
heard that they havn't realy made any money for the last 100 years or
so, JTS that is. It's just a matter of time until you can buy the
whole Atari at a auction for $10.

1275. NEEDED: These Atari/MiDi filez!!

Newsgroup: comp.sys.atari.st
Date: 1997-04-22 00:00:00 UTC
From: dooley@infomatch.com
Message-ID: <5ji0oe$t19$1@berlin.infomatch.com>
Source record: 123546

Hi all!

Just looking for a few items!!
I'm looking for a Mixermap for Cubase and the Roland MKS 30 keyboard and
any other editor/librarian..etc for this keyboard!

Also looking for Any midi files for the following products..
This includes Editors/librarians/patches/whatever..

Yamaha REX50 Effects Processor
Yamaha PortaSound PSS680 Keyboard
Peavey SP Sampler

1276. Wanted: These Atari Items! Read Me!!!

Newsgroup: comp.sys.atari.st
Date: 1997-04-22 00:00:00 UTC
From: dooley@infomatch.com
Message-ID: <5ji29a$6o4$1@berlin.infomatch.com>
Source record: 123547

Hi all!

Looking to pickup these Atari Items! If you have any.. sell me them!! :)

Atari SCSi Host adaptor
Atari Accelorator (adspeed, pak26/30..etc..) Must be 1040 STe compat!
Atari Sampler Cartridge (ST Replay, STereo Replay..etc..)
Atari Scanner (16+ greyscale) plus Atari host cartridge
Atari Mega STe (If you are selling one CHEAP! TT will do too! Also cheap)
Atari Monitor MaSTer

And this ain't an Atari product.. but I'm still gonna ask anywayz...
Alesis D4 Drum Rack (Drum Machine)

If you have any of these Please E-mail me the price you want for the Item.
I'm not a pawnshop and won't haggle.. So tell my the price you want for it
as I just want to buy the thing ASAP.. not haggle over a price for a week!

Also include as much info on the product as you can supply.

ex. Please don't do this..

"I got a scanner... Gimme 40bux"

Tell me make + model, B/w or greyscale/ color.. You get the picture..

Thanks :-)
Johnny

Could this speed difference be because of the cache? the way caches work,
you wont (necessarily) get the same results every time. At least, thats
what the GEMbench manual says...

>> 3.05 TT. Finally, the string search test shows how slow some operations
>> are still going to be on the 68000. I wrote this program to test more

hehehe... now, if a MegaSTE can out-perform a TT (I dont believe it
either), what will your AB040 be like? :)

Does the Hades come along with some drivers for i.e PCI video cards, or how does it support a new video card, if you will plug-in one, let's say Matrox Milleneum? Does it detect it right on, and you therefor you can use bigger and nicer resolutions, or will you have to condifure any screen drivers?

Take Care, Miika

Magnus said *Nembench* not GEMbench. Nembench is written by Doug
Little and does accurate processor/memory tests (unlike GEMbench)
and includes a test for the DSP (so my 50Mhz DSP speed shows up in
tests rather than being ignored...)

>Rob, tireless GFA programmer

Um, how can you write an accurate speed-tester in GFA? The compiler
will be putting in a load of code which you really dont know about
which could affect the speed of tests...

Anthony

Hmm... John Skruch was very helpful with regard to my query about the status of SAM (ie. gave me permission to distribute a modified version of their copyrighted software!) and I am supprised by his response to your query....

Maybe there was a better way of phrasing that you wanted that info?

>B) TOAD'S NEWSLETTER HAS BECOME A PC GEMULATOR LIST, ASSIDES FROM THE
> FEW C-LAB FALCONS THEY STILL SELL.

Yes, I agree entirely about Toad - they certainly seem (from this side of the Atlantic) to have dumped Atari stock...

The problem with that (there's always one) is that it is a 'pure' test.
Nothing like any kind of application code you'd ever run into.

We really need a good _general_ benchmark program, IMHO.

I'd be very surprised if a program like Imagecopy was as fast as a good
'viewer only' program. AFACR it handles far more formats, though.

There's also a new release of the Apex viewers on the horizon that might
even be close to MGIF at GIF display speed.

By the way, how fast is JPG220 compared to other DSP JPEG viewers, like
Apex and anything using JPEGD (MGIF is probably the fastest JPEGD one)?

>This would run on a Falcon with FPU. I may or may not need the catalog

I don't know about any graphics format that would be helped by a 68881/2.
It might be interesting to compile the IJG JPEG library for the '040 FPU,
though.

1286. ST+ Want Writers?

Newsgroup: comp.sys.atari.st
Date: 1997-04-22 00:00:00 UTC
From: "ST+ Diskmagazine"
Message-ID: <335eabdb.13649856@news.airtime.co.uk>
Source record: 123557
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

ST+ Diskmagazine, The only Monthly ATARI publication, and currently
enjoying its second successful year :)

Ever felt the urge to write an Article? or maybe you have some
software that you think is brilliant and want to tell everyone about
it? well here is your chance,
Maybe you want to FREEly advertise or promote something ATARI
related that you are involved with,
ST+ Is mostly an "off line" production with a targeted audience
of people who do not have access to the Internet, so maybe you want to
send them a message, tell them something or make them aware of
something?

ST+ is always pleased to receive anything that anyone writes!, so
long as it is in good taste, not offensive or illegal, then it will
get used,

ST+ is more than likely about to go to TWO disks per month, this
is to accommodate 256 colour graphics and other essential diskzine
files, NOT for PD or useless programs you already have :) but for
extra articles and graphics,

So there will be room for just about anything you want to submit,

ST+ are especially on the look out for anyone who wants to take
on a regular, more permanent role, the diskzine is cut into sections,
with each section having there own editor, so maybe you know enough on
a subject to write every month and have your own little corner,

Whatever you want to write, then simply send it in and it will be
used, this is your chance to get your views/ideas and thoughts across
to not only the on line community, but also the majority of ATARI
users who do not have the Internet,

ST+ is distributed world wide, check out the ST+ web pages for
more information,

Don't forget! you do not need to contribute, you can still enjoy
ST+ by just reading it..we don't mind :)

All Feedback, Submissions to : diskzine@earthling.net

A boot manager should be able to do this.

There are several available, some are Falcon only, so it's best to have a
look on a site like umich.

Or, maybe somebody could make a reccommendation.

1288. ST MIDI File Player

Newsgroup: comp.sys.atari.st
Date: 1997-04-22 00:00:00 UTC
From: Mark Chamberlain <markachamberlain@unn.unisys.com>
Message-ID: <335CB9F6.123C@unn.unisys.com>
Source record: 123559

Hi,

I've just set up my old 520 STE, stuck 4 megs in it, attached a Roland SC-7 module, and fired up my old MIDI programs, but they're just so slow to load anything in!! These days I don't need to actually record any files, just play standard .MID files through the module, so I was wondering if there is any PD/Shareware out there that simply loads .MID files in and plays them, without all the overheads of recording/notation etc etc. The faster they load the better - I can set up a ramdisk to hold a few files.

Any help would be greatly appreciated!

Cheers

Mark Chamberlain

The hades comes with a driver for ET4000 and yes you will need a new
devicedriver for other cards.
I think there are work going on for new devicedrivers.

Minix? As long as you are running MiNT you can access your minix partition
- unless of course you mean that you actually have Minix (the unix-like OS
which is NOT run under MiNT)

>Or, maybe somebody could make a reccommendation.

Well, I use Stoop (Falcon only) to do exactly this - I switch between
all the AES's by getting it to switch the MiNT.CNF with a different one
for each AES (oAESis, AES 4.1 etc...)

I know of someone who has written their own custom program which actually
inserts a 'GEM=' or 'INIT=' line into MINT.CNF dependent on menu options.
This is hard-coded into his own system, but it wouldn't be that hard for
anyone to do...

1291. Maggie 23 Release Delay

Newsgroup: comp.sys.atari.st
Date: 1997-04-22 00:00:00 UTC
From: Chris Hulmes <Chris.Hulmes@education.camcnty.gov.uk>
Message-ID: <335D3D37.6E8F@education.camcnty.gov.uk>
Source record: 123562

Due to a technical hitch, Issue 23 of Maggie will not be released at the forthcoming Brum and London shows - but will be available after the General Election.

For those of you who are going to the shows and wish to buy a copy of Maggie 23, you can place advance orders (with payment etc) with Goodmans and Floppyshop. We will supply the issue to them when it is completed.

The official release of Maggie 23 will take place at the Glasgow show - but will be available on the Internet before then.

Don't worry, Maggie will still be published !! :-)

NB: This is not my usual posting or email address, please DO NOT send replies here.
Any queries, please contact me (Richard) on felice@zetnet.co.uk.

> Sometimes post go missing on there way to different news feeds, sorry
> about that :)

!ynoT:

This isn't a flame or anything, but just some simple education:

When you post to a newsgroup and see it there immediately, that is only on your local server. The mail then needs to be uploaded to it's primary feed, and then to it's primary feed, etc. until it is propogated throughout the web. Usually, the program that uploads all incoming news will run anywhere from every 10 minutes to every 2 hours. Not all links download instantaneously, either, so that can add some considerable time lags as well. If you get some slow links in the chain, it can (and does) take up to 1.5 - 2 days for a news message to propogate throughout the web.

Usually, you'll want to post once per week or so for 2-3 weeks before posting a crazy message about no interest... unless, of course, that the message you posted in this manner was solely to generate interest...

(I'll admit, that IMHO, messages generated in that manner are tasteless and usually don't get my attention...)

Anyway, just wanted to let you know why not everyone got your first post... Hope this helps,

Roger "Merch" Merchberger

I'm afraid I've had a similar problem with upgrades to MagiC 5 and HD driver. Toad has my disks but won't order the upgrade. Much as I hate to do it I'll probably have to resort to some kind of legal action to get them returned. On the phone they said they had sent them to System Solutions for the upgrade. I checked and this is not System Solution's policy. Clearly Toad doesn't give a hoot about the customers that kept them in business for so long. I understand the need to move on, but don't take orders you have no intention of filling.

p> I have put every file as explained in the readme file on the gemulator
p> disk, but all I get when I start the Gemulator program, is a message
p> telling me:
p> Offscreen-Treiber nichs gefunden.
p> MCMD wird gestartet...
p> System wird angehalten.
p>
p> What's wrong? Any suggestions are welcome!

The first line means that it can't find the offscreen drivers, which are
named OFF*.OSD and are placed in C:\GEMSYS\

Then it's trying to run a CLI - maybe you could take a look in the MAGX.INF
file to see if this is called somewhere (I forget tbh...)

Hallo there,

Use XBOOT and your problem is over. I'm doing this. I've create a
dir mint_cnf and in that dir I've copy my differents mint
configuration files, ofcourse all with a different name.
At boottime XBOOT copy and rename the needed mint configuration
file to the root of my bootdrive

e.g.
copy c:\mint_cnf\mintnaes.kl c:\mint.cnf

Hope this help

It is 'freeware' of a sort. :^)
That is (the way I understand it) the program is free, but registering
it
gets you the manual. I think it's a very good deal, for 5# or 10$.

> missing from the magazine on purchase the shopkeeper always
> seemed to have a couple of spares.

The disks were not supplied by a third party, the master disks were in effect provided by the magazine having been produced in house by the magazine staff, virus checked in house, then sent to a disk duplication company for wholesale copying ready for glueing to the mags. If you got a duff disk there was no point sending it to the Magazine producers, they didn't keep boxes of spares in the office, the disk duplication company did that, the magazine did not need to control the issue of disks, the duplication company would be contracted to make x thousand copies, most would go onto the mags, the rest kept as replacements in case of complaints, a simple system that worked well for years.

As for the newsagent having spares for disks missing from the mags, where do you think the missing disks from the mags went? AFAIK the mags were supplied to the newsagents with the disks attached, if he/she chose to remove them you would have the situation where ten mags had disks missing but the shopkeeper had ten spares, lucky that eh?

I am 99.99% certain that what I say is fact, perhaps Frank Charlton or Andy Curtis can comment?

I've been wondering...

How does one run STiK under Magic? Whenever I load it in as a .PRG, the dialer becomes inaccessable. Is it possible to multitask STiK and still dial?

And while I'm at it, is there any way to get Mint running under MagiC? I'd like to use PPPkit to get stik running with PPP, but wasn't able to get Mint to run under MagiC.

Thanks.

: This would run on a Falcon with FPU. I may or may not need the catalog
: functions of Imagecopy.

Dave, I would guess that IC4 is comparable to Apex for JPGs if
the Brainstorm decoder is installed and you are running in 65K colors.
AFAIK, the FPU doesn't enter into it. Don't know about the registered
JPG220. On the plus side, IC4 shows the JPG at full size whereas the Apex
viewers scale to fit the screen.
BTW, if you have a lot of pictures, the catalog (and slideshow)
function(s) are great.

Hmm.. I've a few more results which may be interesting.
no acc's loaded, just patches and xboot.
E�Bench v1.65 4.13.97
Falcon030 TOS4.04 16MHz mono noNVDI blitter
Add 2-byte 27.17 89%
Add 4-byte 27.68 88%
Multiply 2-byte 27.72 93%
Multiply 4-byte 33.86 88%
Scroll text 223.31 12%
Draw boxes 37.71 86%
Draw patterns 29.19 87%
VDI Copy 7.69 292%
String search 35.85 53%
Hard disk write CRASH
Hard disk read CRASH

E�Bench v1.65 4.13.97
Falcon030 TOS4.04 16MHz mono NVDI
Add 2-byte 35.54 68%
Add 4-byte 35.54 68%
Multiply 2-byte 36.73 70%
Multiply 4-byte 41.83 71%
Scroll text 26.12 103%
Draw boxes 25.29 128%
Draw patterns 19.88 127%
VDI Copy 12.33 182%
String search 35.88 53%
Hard disk write CRASH
Hard disk read CRASH

the hard disk crash is because I should have had the program
running from c:\ instead of e:\e_bench
what I find interesting is that, all things being equal, AND
assuming the program will reproduce these reults when run again,
is that with NVDI loaded, my 2 and 4-byte numbers are lower - a
result of the calculations NVDI is making when it is running?

and VDI copy is _slower_ with NVDI than without.
Not what I would expect. :^)

PAW>The UK distributor is/will be System Solutions.

Yes. Translation is nearly finished. You can take a look at (and
buy) Texel 1.60e at the Birmingham and London Atari shows this
weekend. I'll be there, too.

PAW>In the V1.59 beta demo I saw the MS-Excel menu entry was greyed out
PAW>but the Lotus 1-2-3 was not.

Texel 1.60 supports 123 import, but neither Excel import nor 123/Excel
export.

bye, Thomas

1316. Texel v1.6 English Ready To Ship!

Newsgroup: comp.sys.atari.st
Date: 1997-04-23 00:00:00 UTC
From: chris@compdirect.com
Message-ID: <AF83F68D966818A56D@isdn-pool2-06.worldgate.com>
Source record: 123437

Computer Direct is pleased to announce that Texel, the superb Spreadsheet long awaited is finally ready to ship!

Texel is without doubt the most awesome spreadsheet ever released for TOS / MagiC OS'. Texel supports all of the modern interface gadgets and Lotus 1,2,3 import for cross platform compatibility!

Texel is being shown at the upcoming UK Atari show, by the authour himself, Thomas Much. Don't miss out on this excellent opportunity to meet Thomas and Texel in person!

Texel will be sold by Computer Direct in North America. Orders are being accepted now at an introductory pricing of 139.99 Cdn. or 99.99 US!

All the best,

Chris @ Computer Direct

---

That's right!

NO Selling! NO Sales Pitches! Just simple distribution of full color catalogs. Distribute catalogs to your friends and family, co-workers, or any body who is interested in Video's and/or CD-ROM's. They will appreciate not having a sales pitch thrown at them. Everybody loves looking at catalogs and now you have the opportunity to cash in on this business.

We will send you a full color catalog of the selection of Video's and CD-ROM's. We will also send your information on how you can start your own business for less than $30.

Just for taking a look at the video catalog we will send you a certificate for $10 off your first order, should you decide to place an order with us.

What's the risk? You receive a $10 off certificate just for looking at the program. You get a full color catalog of VIDEO's/CD-ROM's. You also receive information about an amazing financial opportunity.

Simply send $10 to D.S.I. Marketing Services Inc. Box 42167, Calgary, Alberta, T2J 7A6

** If you are not happy with the information supplied to you simply send everything back for a full refund. Our return policy is 30 days subject to the discretion of D.S.I. Marketing Services Inc. **

You can't. The PC's drive controller is not the same as the ST's
one so the chances of them ever working are damn low. But the
protection could be patched... if you have the knowledge.

>Firstly, I went and bought a game (Supremacy), and used imgbuild (with
>/slow), and by looking through the image I can see it contains text
>from the game, but won't boot up.

A few people are having problems with some images not booting -
I suspect a bug in the most recent versions of the emulator.

>Secondly, playing Deuteros, I try to create a save game disk (in it's
>own special format), it says it is formatting the disk, then reverts
>back to "not game disk", ie it hasn't worked. I've tried using a few
>different images, with different numbers of sectors.

PaCifiST v0.41 and 0.42 have a good few problems with disk
images; 0.42 cannot write to them at all. To be fixed in the
next release.

Source record: 123442

Thanks for the replies.

I have tried pressing the alt key, unfortunately to no effect.

The label on the front of the drive says 'Third Coast Technologies & is approx 80 meg in size, unfortunately I dont have a manual or any setup disks.

I have a floppy with some files in an auto folder (ICDBOOT.PRG & ICDBOOT.SYS) but the drive still loads from C and ignores the a drive.

I have tried turning the drive on after booting the computer but this just crashes the system.

1322. Magic 5 and ExtenDOS Pro

Newsgroup: comp.sys.atari.st
Date: 1997-04-23 00:00:00 UTC
From: rojewski@primenet.com
Message-ID: <5jmok6$6hk$1@nnrp01.primenet.com>
Source record: 123443

Just downloaded the ExtenDOS Pro update to version 2.4 on:
ftp.funet.fi/pub/atari/cdrom program epro_240.zip

Worked very well to upgrade from 2.3a to 2.4.
This is necessary to get it compatible with Magic 4/5.

epro_23A.zip is also there, to upgrade from 2.1 thru 2.2 to 2.3

Thanks to Anodyne for keeping their products updated.

```
Hi, I am pleased to announce the release of CHECK_M.
CHECK_M is an online email checker.
Allows you to constently checking your mail every X minutes.
If new mail, a window will popup on your screen.
From there , you can view the email or ignore it.
If no new mail has been detected, nothing will happen.
Works as an ACC for singletasking users, or as a PRG for m.tasking
users.
This client strictly follows the POP3 RFC.
CHECK_M is available on my homepage. Bye :)

>I used GEMview to view it and it looked just like any graphic image file to
>me except that it had to redraw the whole image again and again for each
>scroll :-(
use 1stguide for that, (for example :)

>
>I converted the file to .IMG and it looks the same except that it's now
>*a lot* smaller, and there's no "updating"/"redrawing" to do.
>The .GEM file was around 315 Kbytes, while the .IMG file is only around
>24 Kbytes!!!!
yup, :) no good :) you can not just convert a vector picture into a
bitmapped one, you need a special software for that (that will
understand how to translate vector into bitmap)

>What am I 'loosing' when converting, if anything at all? Is .GEM just an
>old image format? I can't remember ever having to view images in that
>format before.

you don't do a lot of DTP ;)

Sure. Either install it as an accessory, just like with single-TOS, or
use my improved Dialer to make the connection.

> And while I'm at it, is there any way to get Mint running under MagiC? I'd
> like to use PPPkit to get stik running with PPP, but wasn't able to get

Why do you want to run two different operating systems on your machine at
the same time ??? This can't work. Both do preemptive multitasking, and
of course do not cooperate.

Cheers Peter

1326. C-Labs MK-I Atari Falcon '030 For Sale

Newsgroup: comp.sys.atari.st
Date: 1997-04-23 00:00:00 UTC
From: dhbutler@tiac.net
Message-ID: <dhbutler-2304971907080001@p12.ts32.metro.ma.tiac.com>
Source record: 123447

I currently have for sale:

* Atari (C-labs) Falcon MK-I ?030 with:
- 14mb ram
- PowerUp 32mhz clock accelerator (20% speed boost)
This is only about 18 months old, and is in like-new condition. Will come with all the manuals and software, and in the original box. No Hard Drive or monitor is included. Does include adaptors for both SVGA monitors and the old Atari color monitors (or compatibles)

Other items:

* Apex Media

* Blowup hard-I

* Also I have 4 4mb 30pin parity simms (3 chip simms, not 9 chip)

Make some offers. They go to the highest bidder. You pay shipping in all cases. Would prefer to sell the Falcon, Apex, and Blowup as a package if possible.

Please reply to: dhbutler@tiac.net

Source record: 123495

In response to greg_evans@delphi.com's message:

>If anyone knows who the publishing company is perhaps
>some email could clear up the questions about the delays.

Even better - I can give you the author's email addresses:

Thomas Much @ KA2.maus.de (May need an underscore or hyphen in the name
and droip the spaces - but this is the way it's given in the Texel README)

Thomas.Much@stud.uni-karlsruhe.de (for mails <16kB).

Also on WWW at http://www.uni-karlsruhe.de/~Thomas.Much
and the Texel page with an extra /Texel at the end.

The UK distributor is/will be System Solutions.

In the V1.59 beta demo I saw the MS-Excel menu entry was greyed out but
the Lotus 1-2-3 was not.

HTH

I finally got KEMD to install with no errors! Now it simply won't
run!

I did follow the instructions religiously.

But when I rebooted the system it gave me the message:

FATAL: Couldn't run /usr/multitos/Init.prg Exit Code 33
[CRASH]

So what's the deal here?

eek. Drive rot, maybe? [snicker] Seriously, Not Good.

: Is there a command to force the machine to boot from drive A so that I
: can replace the damaged files?

We need more info about this drive, the drivers, the controller card, and
so on. Once we know that, we can then answer your question.

Hummphh.. I guess your are right, but I still prefer a good mips
counter before a poor benchmark program wich say that a 68040
is slower than a 68030. :-)

> We really need a good _general_ benchmark program, IMHO.

So what are you waiting for? A fast c-hack shouldn't be to hard
for you. Maybe you can use some of that GEM-DEU code you have done.
Doesn't it already have a 'test' mode of some sort? Just loading
a GIF image wouldn't be to bad either and then applicate a bumpmap
filter on the image. :-)

Assuming you have AHDI.....

You need to place a bootable floppy in drive A

This is a floppy which contains an Auto folder, which contains AHDI.PRG.

Put the floppy in drive A, power up the machine, wait for the floppy led
to come on, hold down the CTRL,SHIFT & ALT keys. Your machine should boot
from the floppy.

You will have to temporarily install the hard drives onto the desktop, but
this should allow you to get access to the faulty files & move then out of
the AUTO folder on drive C.

If you are not using AHDI, the procedure is still going to be very
similar, the driver names will be different.

Good Luck.

With most hard disk driver pressing the Alternate key while booting
prevents booting from hard disk.

But as Johan pointed out to me they used different video modes, but it realy shouldn't differ that much from mono and 16 colours. About the AB040 don't ask. I know Johan got a bit upset when he did the test. Not very cool at all. :-)

: p> telling me:
: p> Offscreen-Treiber nichs gefunden.
: p> MCMD wird gestartet...
: p> System wird angehalten.
: p>
: p> What's wrong? Any suggestions are welcome!

A direct translation is:

Offscreen drivers not found.
MCMD cannot be started...
System has been halted.

(I translated the rest of my MagiC to be completely english)

In essence, one of two things has happened. Either the booter of the
drive couldn't not be found by MagiC which tends to stop things if the hard
drive is not accessed, or GEMulator hasn't a clue where to find all of the
necessary files due to MAGX.INF not being found.

Hello everybody!

I have heard about a software called BLIP, that is develloped by ASH.

BLIP is an internet routine software for CAB.

Blip should use PPP, perhaps CSLIP and SLIP is implemented, too.

Does anyone know more about this?

Hi All,

I know this is off topic, but Paul Allen has set up a web site at:

http://www.Paulallen.com/

I just left some e-mail asking him if he's heard of CAB/STiK for Atari computers. This web site can only be viewed properly with IE v4.0 ;(I ask if he could make his site more CAB friendly =) I got an auto response saying he would consider it if more replied. I have a ulterior motive here as I'm a big Seahawk Fan and he plans to buy the team and build a stadium, with tax payers help of course. If he receives a bunch of Atari requests, it might just get his attention.

I connected to his site using CAB v2.0a, and yes, mailto works on my Falcon. Otherwise, you can e-mail directly to: askpaul@paulallen.com

I know this is a bit of a joke, but humor "Slays the Beast". You might mention the Seahawks are second only to your Atari computers]:^)

Please don't flame me too much on this one, I'll support your "Dance with the Devil in the pale Moon Light" the next time around...

Charles

1346. Quick FAQ - v1.0 - Released

Newsgroup: comp.sys.atari.st
Date: 1997-04-23 00:00:00 UTC
From: bales@garonne.stortek.com
Message-ID: <861799841.5337@dejanews.com>
Source record: 123511
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.st.announce

After checking that there were no major comments after I posted Draft v0.7 last week, I have finally converted the Quick FAQ to HTML and put it on the web.

No big changes except the HTML conversion, and the removal of all the machine specs that were taking up too much space for a 'Quick' FAQ.

It's currently on geocities in the US, so if anyone is interested in mirroring it somewhere in Europe, please contact me.

So here's the URL:
http://www.geocities.com/MotorCity/2090/faq10.htm

Now, does anyone think I should still post the text version in c.s.a.s every week or is that just a waste of bandwidth ?

Nicholas Bales, Toulouse, France

>
> I believe that TOS 2\3 supported HD disks from v2.05/v3.05
>

It depends what you mean by support. To my knowledge there are only two
things that affect TOS as far as HD mode goes:

-High Density format option on the desktop:

This can be activated by jumper 7 (STE/Mega STE) on any TOS >= 2.xx and
you can always use another program to format HD.

-Initial step rate on boot at 6ms for HD floppies:

On my TOS 2.05 STE with DD drive, it is definitely 3ms, but there are
several auto folder progs to change that to 6ms. TOS 2.06 default is 6ms.

Maybe there's a jumper to change this too?

Step rate can be changed on any TOS anyway, so I guess just about any TOS
can handle HD floppies. Only from 2.xx on, you have the HD format option.

Am I missing anything?

Ok, ok, if that's the way you want it... ;-)

I've just decided to remove the specifications section from the Quick FAQ
as it was getting a bit too detailed in my opinion. I've include a
pointer to the Elysium products review page, which is more detailed an
clear anyway.

Haha! gotcha there! ;-)

First off, I don't know exactly how much I can help, we will see:),
But there is a newsgroup "comp.emulator.misc" where you should find
better help as they obviously know more about emulators than most of
us :)

>question is how do I get protected disks to work with Pacifist?

Normally you don't, it is that simple, BUT the latest release of
PaCifiST 0.42 states real access to drive A, although i havent tried
that yet, when pacifist can actual access the physical drive like
other atari emulators do, then you may have more luck, but I dont know
anyone who has managed to get protected disks to run :(

make sure you ahve the latest pacifist, new version out at end of
month, and maybe give the bods in the emulators group a shout :)

HTH a bit :)

.

Hi!

If you just want something to play back general midis easily and quickly...check out MIDI Spy. It's a neat little utility that can be loaded as an ACC, or a PRG. It offers the ability to constantly record your keys...even when running other applications...and is a nice tool for laying quick and dirty sequences. It'll load MIDI 0 and MIDI I files, as well as its own sequence format. You get the choice how it loads MIDI I files...It can seperate the tracks, or merge them. Not a bad little program. Very small...and the whole user interface fits in a multi page dialogue about 3 X 4".

Here's some tips...
Depending on the sequencer you run...
If you run KCS Omega, and 4meg of ram...and ya want quick/live action do the following.

Set up a boot disk that only has the Level II sequencer, and the SONG EDITOR...no other modules. Now, use the song select mode and build sets of say 10 songs. With 4meg you should be able to load a set easily. Now you can use the "Song Select" midi command to punch in the number for the song you want...takes about half a second to start playing! KCS lets you store these sets as one giant sequence, and load them all in one fell swoop. There is also a nice feature to let you print out the sets, and what "song number" goes with what song.

If you use Notator/Creator...
You can do a similar thing as with KCS...but it'll take a bit of thought in planning everything out. Simply mix your songs down to single patterns, or groups of patterns, and put them into a nice long arrangement. Dig into your manual and figure out a way to run all this by remote control if you need. I'm pretty sure you can! My experience with these two sequencers is that you can teach it to do almost anything you can imagine!

If you use CuBase, the process is similar to that of
Notator/Creator. Build Arrangements that merge several songs into one...
dig into the manual and create a useable way to easily begin and end
particular songs easily.

I've never tried to use Logic, so I can't help you here...but
I understand it is very much like Notator with a new GUI (different
look/feel, but the same sequencing engine).

It's been years since I've seen Master Tracks Pro, and I've never
tried Sequencer 1...so I can't offer any useful tips here.

Finally...
If you can...and don't already have one...get a hard drive.
This'll speed up the loading of files and programs BIG TIME.

Hope this gives you some ideas...

Anyone have a used copy of Font Designer Plus they would like to dispose of? I only need it for one project and hate to invest in a new copy for something I won't use on a regular basis.

Reply to T.KELLY12@genie.com

Are you sure that the mega keyboard has keyboard switches? I know that the MegeSte keyboards does not. When some of the keys went bad on mine it turned out to be a hairline fracture in the plastic overlay circuit board that is used in place of keyboard switches. It was fixable, albeit a bit scary. Someone at Best Electronics recommended that I use the material available at auto parts stores to repair damaged rear window defroster elements. It paints on, but you have to scrape away the insulating material on either side of the fracture. There's not much there so you have to be careful.

It's not being made anylonger. You might get hold of one sconde hand
if you are lucky. The Mighty Sonics big brother is avaible though, the
Afterburner040. It's made by the same guy, Gero, if I'm not
wrong. It's actually very similar to the AB040.

1362. HD Size Limitation on Mega STE

Newsgroup: comp.sys.atari.st
Date: 1997-04-24 00:00:00 UTC
From: frank.chan@acpu.com
Message-ID: <861864525@acpu.com>
Source record: 123327

I understand that a SCSI HD can be connected internally to a Mega STE.
Does anyone know if there is a hard drive size limit for the SCSI
controller on the Mega STE? If there is a size limit, what would happen
if you attached a larger HD to the Mega STE? Would I be able to
define two partitions under the size limit or would the Mega STE not
recognize the space above the size limit?

I heard some rumors that there is a 500Mb limit on the SCSI controller
and wanted to confirm or deny this rumor.

Thanks to all.

S > Your machine should boot from the floppy.

While I am sure that this will work most of the time, I once had a corruption problem that it wouldn't work on - if I put ahdi.prg in the auto folder on a floppy, it seemed to point to shdriver.sys and the computer would then boot from 'C', defeating the purpose. (Don't ask me why - I am an idiot in these matters.) So I advise people to use a blank formatted floppy, and then run ahdi.prg from the desktop.

But what I really advise people to do is use Superboot (or other boot manager). Even if you don't need or want all the nifty features, it is the best way to protect your C drive from rogue accessories and incompatibilities in ye olde auto folder. I haven't had to use the 'back door' approach but once, I think, since I started using it, years ago. Before Superboot, I got real familiar with that back door :)

The Chameleon offers a good way to avoid trouble with rogue accessories, by the way.

ICD hard drive utilities offers the option to boot from another partition at bootup time - does CBHD and HDDriver? This is another way to 'go in the back door' - if the hard disk booter is still in business. Ahdi, of course, won't do this.

: Well I just tried to go take a look and got the following error
: message????

: The requested URL could not be retrieved

[snip]

As a general rule whenever that happens all you have to is chop off the
end part and try again and it will work:

http://www.axionet.com/excel/tos.htm

becomes...

http://www.axionet.com/excel/ <-This one works BTW.

The reason why is because sometimes there are problems with the exact file
name and this will get there anyway without the problem.

Also, if that doesn't work then chop off some more until you get it:

http://www.axionet.com/excel/

now becomes...

http://www.axionet.com/

And so on... until you finally get through. Of course you may need to then
check out the resulting folders that show up to get where it was you
wanted to get to in the first place but... atleast you'll get there
eventually. -If it still exists that is. :-)

.GEM contains a list of VDI opcodes, together with parameters. It is thus _very_ easy to show the contents, just open a VDI workstation, and supply it with the opcodes from the file, one at a time. The whole display code can be as short as about hundred bytes.

> >I converted the file to .IMG and it looks the same except that it's now

> >What am I 'loosing' when converting, if anything at all? Is .GEM just an
> >old image format? I can't remember ever having to view images in that
> >format before.

.GEM is not older, it is another way of storing the picture. In fact for technical drawings, like circuit diagrams it is the better format. It's big advantage is that it is resolution independent, i.e. always shows the best representation, regardless if a 640x400 SM 124, or an 1600x1280 19 inch monitor, or 6600x4800 A4 600 dpi printer is used. Have you tried to print a screen size .IMG in a page filling way ? It looks disgusting !

I believe that that is the final version, mine certainly allows printing.

h> Secondly, if it is freeware, why is there a note in a lot of the
h> programs off of hensa included in a list which tells you how to
h> register the shareware program(Marcel is on the list). Are they

Probably because no-one has updated the list.

I'd prefer that shareware that wasn't being supported anymore was released as
freeware rather than being dropped, especially if a key is required or
restrictions on use applied BTW.

MR> little late, don't you think? Good luck.

This is actually very interesting, if you ignore the 'attitude' that
accompanies it.

Is he saying that JTS value their copyrighted information *so little* that
they have no interest in retaining exclusivity over this information and see
no commercial value in it?

If this is correct then some serious discussion ought to take place so that a
form of words could be prepared that effectively turned the technical
information over either into the public domain or over into the hands of a
collective of hobbyist/individuals who only held license as the collective
and not by individuals or organisations who would restrict its distribution.
Effectively it should be made freely available to whoever needed to make use
of it for any reason.

I'd imagine that JTS would want to ensure that they retained some rights over
the technology, but as long as it didn't actually turn into the basis of a
new computer it's quite possible they wouldn't be interested anyway.

If all this is viable then it would become possible, with formal authoity
from JTS, for any technical developer documentation currently aailable from
old/existing developers to be duplicated and collected into one definitive
resource.

I am *not* the person who should head this up because I have no technical
background, but if someone believes themselves to be sufficiently competent I
believe they should make themselves known. I also think that an EMail list
needs to be started so that the approach can be prepared and made properly -
access currently to be open. I'm not sure that this is something that can be
done in an open newsgroup without shooting our bolt.

Is anyone with me on this? If someone can create a mailing list, please add me under my sidcelery@cix.compulink.co.uk address rather than this gateway.

I would disagree entirely if this thread got bogged down over flames and recriminations toward Atari/JTS - it is wholly futile as they have gone and are not coming back. The statement John Skruch made, that the Atari computer has been dead for over 5 years in their eyes proves beyond all doubt that Atari's interest in computers died even before the Falcon was publicly released, which is something I've seen publicly admitted by Atari personnel for more than a few years already and should be taken on board.

There should be no recriminations when the time and effort is better served directed toward making the most of what we have now and taking it forward.

f> To make things fly:

f> Pinhead 2.1 (speed up read/write operation) (free)

Just to clarify here, Pinhead has no effect on read/write speed, it speeds up program loading speed by disabling the memory clearing routine that TOS performs on loading a program. Owners of TOS versions 1.4 and above can set the "fastload" bit in the program's header using one of the PD utilities available.

f> Setseek 1.0 (faster disc rotation) (free)

This only affects the seek speed of the read/write head, it doesn't alter the rotational speed of the drive.

Hi Hallvard!

h> Can someone please tell me what a .GEM file is?
I'm surprised that you haven't met these before, they are Metafiles produced
by drawing packages such as Easydraw and Kandinsky.

They are vector based drawings so can be rescaled or printed out on a variety
of devices without losing resolution ar gaining "jaggies".

To be original I'd advise you to have a look to diapo, which
is pretty fast for displaying pics and allows the same functions.

Get DIAPO_UK.ZIP or (_GB I don't remeber) for the english
version on your local ftp or at author's website:

1378. Seek WordWriter ST for 1040ST

Newsgroup: comp.sys.atari.st
Date: 1997-04-24 00:00:00 UTC
From: toddslater@aol.com
Message-ID: <19970424190501.PAA27152@ladder01.news.aol.com>
Source record: 123343

Dear Atari users-

I am looking for someone who has WordWriter ST (by Timeworks) for the Atari 1040ST. I would gladly pay for a working copy of the master disk, as it is no longer available from the manufacturer. I would also be willing to trade from the limited software library I have, so long as we are trading software titles that are no longer available and are not breaking any copyright laws. I would gladly pay timeworks for a copy of the disk, but according to them they no longer offer it.

I do not have an Atari internet connection, so I would have to have the disk mailed to me. Of course, in addition to paying for the disk, I would pay all mailing costs. I was thinking $20 total, but this is negotiable.

Thanks for your time. Please email me if you can help me.

>and wanted to confirm or deny this rumor.

This is absolutely not true ! I have used a Mega STE with inner Quantum 850
Mb Trailblazer during one year with absolutely NO PROBLEM !
I have replaced my good old Mega STE by a TT now ... same hard disk.

1381. Ethernet and the TT

Newsgroup: comp.sys.atari.st
Date: 1997-04-24 00:00:00 UTC
From: mlake@melake.erols.com
Message-ID: <slrn5lut8u.9h4.mlake@melake.erols.com>
Source record: 123346

Which Ethernet card works best with the TT ... the Reible card or the PAM card? I know diddly about both. Which card is easier to install? Are there any significant differences between the two cards? Which card works best with Linux? Which card works best talking with a PC? Is there anything that I should be asking that I don't know enough about to ask?

Thanks for any help.

Dave Gostl (dbg01@gnofn.org) wrote:

Hi Dave,
I Believe that Zero X supports the SP directly...
I think it comes with some PD utilities as well, for things like
storing/tweaking maps/paramaters. If you've a Falcon, Zero X also
supports SMIDI dumps over the SCSI port. Of course, it supports SDS
sample dumps via MIDI on any Atari TOS machine.
I believe you can find Zero X for sale at
http://www.ataricentral.com
http://www.toad.net
http://www.compdirect.com

Also try doing a web search on "Zero X"

Hope this helps,
Brian

1383. Success!! (w/CAB & GlueSTiK)

Newsgroup: comp.sys.atari.st
Date: 1997-04-24 00:00:00 UTC
From: csh@falcon.sdi.agate.net
Message-ID: <861843308_OASIS_@falcon.sdi.agate.net>
Source record: 123348

Hello All!!

I got it working!!

I now have CAB working beautifully along with GlueSTiK on a PPP connection. Thanks to the authors of PPPKIT, GlueSTiK, and CAB, along with the always helpful c.s.a.st community for making it possible.

I just have some questions/comments about CAB (which have probably all been addressed before, but I wasn't paying attention)

1. It seems to take a long time for pages to load, like 2 minutes or more, and stuff like TABLE formatting seems to take forever...Is this what other people have experienced, the result of a less-than-lightning-fast Falcon, or just me?

2. Other than the speed issue, I love it! And except for some problems at www.tvguide.com, it's displayed most every (frame-less) page great.

3. This one isn't really about CAB, but can I use the other STiK applications with GlueSTiK, like Newsie and MGFTP? Which ones are compatible, and which are not?

As always, much TIA!

Message-ID: <5jnt16$s08@butler.ac.BrockU.CA>
Source record: 123350

I am trying to format the F partition of my hard drive (it is 11Mb) - I have a 44Mb drive in total. (I want to format it because it was a minixfs partition before. I downloaded AHDI5.ZOO but cannot get HDX.PRG to work properly. I managed to zero the F partition (still can't write files to it), when I tried to FORMAT I got the error message: "WINCAP file not found. Cannot Continue." followed by a nasty crash.
When I tried to PARTITION I got the error: "Disk formatted by previous version of HDX. Please reformat disk."

Can anyone help me? (Do I need to run (from AUTO folder?) AHDI.prg before running HDX.PRG? I have all the files in the ZOO unarchived in my D:\temp directory. Does SHDRIVER.SYS need to be in root of C:\ or something? Is there a doc or faq or AHDI5?

RICK.

1386. HELL'S BBS

You have to add drive "C" (CAPITAL C) for it to be a hard drive, small "c" will
always be the cartridge port.

Yep, Roger gets my vote for being a terrific Atarian! You should get
EPRO_24B.ZIP now which updates the CD-BOS file to handle a bug on the TT
SCSI port. I got it and got rid of a spurious problem with my Toshiba
CD - frequently it would not boot but it sure does now, every time!

> From what I've heard, though, the Motorola would be a good buy, as
>they're promising a free upgrade to whatever standard is set for 56K....

I bought a Motorola ModemSURFR 56K just a few days ago, and I'm using it
with MiNTnet on my TT right now. With HSMODEM installed, I talk to the
modem at 115.2kbps. I connect to my office, and usually the connection is
only at 31.2kbps. Note that the above discussion about competing standards
is right on the money - you're taking a gamble by buying one of these guys.
Also, recent reviews of the USR modems showed that they could only get a
maximum of 44.8kbps download speed, on a very clean phone line, and this
also limited their upload speed to 18kbps. I'm beginning to think it would
be more worthwhile to bite the bullet and buy ISDN service instead, and
get a full 128kbps of pure digital connectivity.

I have not seen any benchmark results of the Motorola modems, but I did
see a news item recently that they had halted production due to problems
attaining 56K performance as well. However, they have resumed production
already, so I guess they sorted out whatever the problem was. The modems
all have Flash eeprom, so you can upgrade easily enough, but I haven't
bothered yet since I'm not even getting 33.6k out of my connection.

Also note that the modem comes with a floppy disk and a CD-ROM, and you have to run a program on the CD-ROM to *register* your purchase. Kind of a drag, I think. Also the documentation is only in PDF format. Has anyone got a PDF viewer for GEM?

Hi Aaron!

Wait a little while. I have heard that ASH is developping internet
Routines for CAB that will run under MAGIC and supports PPP, perhaps
CSLIP and SLIP, too. But this is not sure, PPP is sure.
It will release soon.

If ASH say this you could be sure that this software will work very
safe.

I think he's talking about a partition size. The bootup size is around
maybe 16 or 32 megs depending on your TOS version. I've got an ST41200N
(one gig), and an HP 2247 (another gigger) hooked up with no problems. I
even did a Seagate ST41600 (1.3 gigs), with 300+ meg partitions.

: Tried this but turning on hard drive after booting from a resulted in
: TOS error 35 when trying to access the a drive, when trying to add c
: drive I always ended up with C as the cartridge port.

The lower case c is used for the cartridge port. Use the uppercase C for the hard drive itself. What you want to do is boot the computer itself, and not the hard drive. Turn on the computer with the hard drive off. Then when you see the desktop, turn on the hard drive, and load the driver from the floppy.

: I have now managed to access the hard drive drive!

Most excellent. What was the original problem?

: Placed boot disk in a and turned on computer waited couple of seconds &
: turned on the hard drive, the delay in the hard drive booting seems to
: have forced the system to boot from A but has still registered the hard
: drive as present.

You don't want to use that hard drive boot disk, rather, just a disk that has nothing on or something similar. Then place the hard drive boot disk in, and run that PRG file. Since you got access to the drive, your problem is pretty much solved.

: Any idea where I may be able to find updated drivers?

What version are you using now? I'm not sure if anyone would send you this stuff, as they're considered copyrighted. Can anyone out there help?

^^^^^^^^^ ????????

Well I am a little fed up of reading so often definitive opinions about products.
Reasonably, there are in most cases pros and cons in this matter.

I have been using WERCS for years, and I have developed dozens of resources with
it, with no problem. Is that such a crap?
OK, I run a MegaSTE, so I don't know about color icons.
For WERCS vs MAGIC, whose fault is it? HiSoft used to have excellent developpers
and to produce cleanly programmed utilities.

I am not setting up a debate. I just wanted to say: "Please don't fire so easily
on commercial products that are respectable in many aspects, because they are not
so many".

Cheers.

: functions of Imagecopy.

The answer to that is no. The Apex viewers are actually far faster, especially if you consider that Apex reduces the size of the graphic to fit in 320x240 (VGA) or 640x400 (RGB). However, ImageCopy 4CD is well worth buying for other reasons. The Apex viewers are likely the fastest pic viewers there are for the Falcon, although I don't actually want to bet money on that. :) Sadly, there are, as yet, no FPU+DSP graphic viewers for the Falcon. (Wow, that would be speedy, wouldn't it?)

I can guarantee you that pressing *and holding* the Alternate key will bypass the hard drive. Make sure you press the Alternate key before the computer starts detection of the drive. When turning the computer on, you will notice that the drive light flashes twice before attempting hard drive detection. After the light flashes once, press and hold the Alternate key. That should avoid booting from the hard drive. Avoiding hard disk access in this way works for AHDI, ICD and HDDriver that I know of, and I believe it to be a feature of all hard disk software.

Looks like you have the older ICD utilities, I believe.

: I have tried turning the drive on after booting the computer but this
: just crashes the system.

I had some problems similar to yours, but that time it was going through
an autoreboot loop due to a misplaced ACCessory.

Turn everything off, then turn on the computer, with a blank floppy in the
drive. Then with the boot floppy in the drive, turn on the hard drive.
Load ICDBOOT.PRG, and you should be able to get back in your drive, after
adding the C drive from the desktop.

Hi Joseph, on 23 Apr 97 you wrote: ...respect, brethren
h>
h>>> I downloaded Marcel word processor awhile back, and I recently have
hs>> It was made freeware IIRC
h> I like this news. But, where is the final freeware version?? I have
h> v2.34, which does not allow printing. I got it off of hensa.

This *ought* to be the full and final version - or so I thought...

h> Secondly, if it is freeware, why is there a note in a lot of the
h> programs off of hensa included in a list which tells you how to
h> register the shareware program (Marcel is on the list). Are they
h> falsely collecting money (no flames here, I am asking for an answer, so
h> I can proceed correctly).

Do you not have the file called README.NOW in that archive? Maybe you
haven't got the final version after all. This is what it says to justify the
payment.

##
Marcel is now FREEWARE. This makes Marcel the most powerful and affordable
word processor of its class in the Atari market at this time. Any references
to shareware regarding the Atari version of Marcel can be safely disregarded.

Please note that Marcel Software no longer support Atari Marcel, and any
queries regarding the program must now be forwarded to Denesh Bhabuta at the
following address:

[Cut - addresses out of date]

You may order a printed A5 Manual and a Function Key Guide from Denesh for
the sum of 5 Pounds Sterling. This also entitles you to a Master Disk with
printed label, plus a selection of shareware supported by Denesh.

* Please make cheques, etc payable to DENESH BHABUTA. *

Users outside the UK, please send 6 Pounds Sterling (the extra pound to cover
the extra mailing cost).

Users outside the UK may also send Denesh payment in their own currency,
cheques. If doing so, please send the equivalent of 12 Pounds Sterling.

Thus, for your payment, you will receive
+ Laser printed A5 size manual (approx 30 pages) **Far superior to the 4-
page one sent out when the program was shareware**
+ Function key guide
+ MasterDisk (containing Marcel, Dictionary, and selected shareware)
+ Postal and E-mail support

I am sure that you will be amazed by Marcel's features once you start using
it... Enjoy!

Denesh Bhabuta (The CyberSTrider)
20 December 1995

N> Oracle is desperate to buy them out and I'm sure many other
N> companies sucha s Motorola are interested if the worst comes tot he
N> worst, the cloners will still continue if Apple doesn't.
Problem is that moves like upping the licensing charge that cloners have to
pay is a bad idea IMHO. It can only serve to alienate Apple and put the
cloners off from producing Macs.

Ok, it helps generate more revenue but its side effects are far more wide
reaching.

It's worth a reminder that Mike should use a 600dpi Laserjet driver if he goes the Papyrus/NVDI type font route, that will give sharper printouts than the standard Deskjet drivers which only go to 300dpi.

Speak to 'ya later!

I know nothing about the Sunrise but the manual to my Matrix TC1208e makes mention of a video digitiser add-on and as this card was sold in the USA I would expect the digitiser to work as well.

Not that I know such as I use the Expose in my Falcon for all such requirements.

Of course, but it could equally be used with an emularor, I guess. I already
have TOS 2.06 here as well.

> Well it is an "Expensive Hassle" to buy all the tos versions AND use
> them for an emulator only as suggested?

Yes, that's the point I was making. I agree.

> hehe Still upgrading Harry? I thought you had the perfect setup? from
> what I saw of your machine at the last ATARI show you had everything?

At the time you saw it, I'd say it was far from the perfect machine - good
display, but way underpowered to cope with it. Now I have the TT I've got
the MHz and CPU to get very close - just some RAM and some minor niggles to
clear up now...

> I recall commenting that the display on your machine was far more
> impressive than what the Falcon on show could manage?

It was and is, in that regard. The price I paid for the full unit in front
of me is the sort of cash that anyone here would pay. The trouble is the
overall expense of what I've shelled out to keep up to date on all my other
machines...

> whoops what have I said :)))

Fear not - tis nothing but the truth B^{)

I can't answer that question in that I don't have a Falcon, but it does make
use of the Brainstorm JPEG loader AIUI if that helps with your decision.

More than that though, it's immensely configurable and supports all manner of
file conversions, displaying, slideshows and excellent printing/dithering
options, so it's not a straight choice between the options you've given.

I'll be picking up my copy this weekend.

No, but it would be futile and possibly self-defeating in the context ofmy
other post.

> treating people with redicule who ask a perfect normal question is a
> little disgusting

I completely agree, but lowering yourself to the same level is not the answer.

> Have we not been defending JTS for some time now by warding off pirates
> looking for illegal TOS images?

In effect yes, but more importantly we've ben defending the intellectual
property of a company who has not made it known that they wanted anything
different. That's a point of principle that should be upheld, whatever you
may feel about the merits of their particular case. It's not a justification
for doing anything different.

However, if a proper approach is made in the manner that I've suggested it
may be possible to get an outcome that is both ethically proper and 100%
legal at the same time, which will remove all doubts about the matter. It
now seems that an opportunity exists that didn't appear to exist before and I
believe we're duty-bound to make the most of that opportunity.

Do you agree?

Of course, any ST without an RF modulator can send its outpout to a TV
by using a Video Key. I ran a 1040STf through one into a TV rather
than buy a colourr monitor.
"Shut up," he explained. (Ring Lardner)

1422. POPwatch BETA 0.17 available

Newsgroup: comp.sys.atari.st
Date: 1997-04-24 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <20525342_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 123468
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

POPwatch (BETA version 0.17) is now available from my website (see .sig).
In case you don't know, it's a tool for use with STiK and a POP3 mailbox,
and allows you to check, delete and retrieve email (into Oasis2, NEWSie, and
NOS/Oasis1). It's fully multitasking. It also has a Kill File facility.

Cheers, Gary

POPwatch BETA version changes/bug fixes.

v0.17 23/04/97
*POPwatch was setting the 'reply to' field in the NEWSie inbox.mbx to
the wrong address. Hence trying to reply to an email in NEWSie
presented the wrong email address. Fixed.

v0.16 21/04/97
*NOS format retrieval now implemented. ie. for use by NOS or Oasis1.xx
*Now works with GlueSTiK.
*Retrieval message fixed when retrieving part of message by double
clicking on it.
*No longer causes division by zero exceptions.

>adding the C drive from the desktop.
>

Tried this but turning on hard drive after booting from a resulted in
TOS error 35 when trying to access the a drive, when trying to add c
drive I always ended up with C as the cartridge port.

I have now managed to access the hard drive drive!

Placed boot disk in a and turned on computer waited couple of seconds &
turned on the hard drive, the delay in the hard drive booting seems to
have forced the system to boot from A but has still registered the hard
drive as present.

Any idea where I may be able to find updated drivers?

Thanks for your help

> computer starts detection of the drive.

In case the root sector is corrupted this won't work. That's because the
Alternate key is not checked by TOS itself (unfortunately not) but by
the hard disk driver bootloader part that's located in the root sector.
If a corrupted root sector is the reason why pressing the Alternate key
doesn't work to prevent booting, the only way of getting to the desktop
is to use a boot floppy. This floppy must have an executable boot sector
especially designed for this purpose.
Another solution might be to power on the hard disk after the Atari and
then start the hard disk driver from floppy disk in order to get access
to the hard disk drive.

-----BEGIN PGP SIGNED MESSAGE-----

Linux/m68k is the port of the popular Linux operating system to
computers using the Motorola 68020, 68030, 68040 and 68060 CPUs.
Current releases support Amiga, Atari and Motorola VME systems (MVME
147, 162, 166 and 167); ports are underway to the Apple Macintosh, the
HP/Apollo Domain workstation, and the Sun 3 series of workstations.

The current FAQ is available on the World Wide Web at:

http://www.clark.net/pub/lawrencc/linux/faq/faq.html

Conversions of the FAQ into various formats (plain text, PostScript
and DVI) are available at:

ftp://ftp.clark.net/pub/lawrencc/linux/faq/

The plain text version of the FAQ can also be found at all Linux/m68k
FTP sites and mirrors as "FAQ" or "FAQ.gz" (compressed with GNU gzip).

Questions and comments about this post or the FAQ may be directed to
me. General questions about Linux/m68k may be posted to the Usenet
newsgroup comp.os.linux.m68k.

'Til next time,

Chris Lawrence

Source record: 123274

I am asking another question about the Zipdrives for the Atari STe system. I have LINK (the orginal), megafile 30, cd rom (1x speed) and one 100 meg hard drive currently in use. They work GREAT. I use the ICDBOOT.SYS file on the megafile 30 hard drive and it has NO problems (I don't use AHDI.PRG in the auto folder). Can I use the same driver program for a zipdrive or do I have to get a new driver for my system to recognize it? Also, my cd rom drive doesn't have a SCSI out port, can the zipdrive be put in between my hard drives or does it have to be last in the chain?

I have version 2.3.4 (registered), which is my WP of choice (above Word Perfect, dbWriter, ST Writer, Word Writer, WordFlair, Calligrapher, first Word, etc.,etc.). It prints on my Canon BJ-5 in Epson LQ mode, and on other Epson-type printers. It doesn't work with files created on earlier versions of Marcel!

Try ghostscript. It can view (and print) PDF files but IMHO it's
rather slow. You can find it on the major ftp-sites.
The Belgian ftp-site 193.190.205.13 archive/atari contains for sure
Ghostscript. Look for gs353881.zip and gs353b.zoo

1439. WTB Link2, hard drive, SM-124!

Newsgroup: comp.sys.atari.st
Date: 1997-04-25 00:00:00 UTC
From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <hvI5mIK.johnhechtman@delphi.com>
Source record: 123285

I'm trying to help a friend of mine set up a MIDI system with his 1040 STE. To do this, I need a Link2 or other SCSI interface, a SCSI hard drive, and a hi-rez monitor.

I'd consider a Megafile 60 or Syquest 44 meg drive and any type of monitor that will give hi-rez mono output - it's just that the SM-124 is the most common model which can do this.

Both my friend and I are in NYC, so if you need to ship here, we'd like it to come COD and we'll split shipping with you. Please EMAIL me if you have any of this gear, so we don't take up Usenet with our negotiations. Thanks!

Regards,

John Hechtman

>And while I'm at it, is there any way to get Mint running under MagiC? I'd
>like to use PPPkit to get stik running with PPP, but wasn't able to get
>Mint to run under MagiC.

The idea here is, ditch Magic, install MiNT 1.14 and AES 4.1 with
MiNTnet and GlueSTiK 2.04b

However, FreeSTiK 2.00a will be out soon, and we are presently
beta-testing for Magic compatiblility...

Wait a little while. I have heard that ASH is developping internet
Routines for CAB that will run under MAGIC and supports PPP, perhaps
CSLIP and SLIP, too. But this is not sure, PPP is sure.
It will release soon.

The stack in question, BLiP, is only supporting PPP, and comes
with its own CAB.OVL. But it could not possibly replace either
STiK or MINTnet, as it still doesn't have e-mail, news, FTP or
IRC clients for it...

While this is true, under TOS 3.01 with DS7 set, the HD format box appears
but is not selectable in any way. This was fixed in v3.05 AIUI.

b> Am I missing anything?

I don't think so - everything else sounded right to me...

>
> IS there any software using the LAN conector?

MacDonald Associates sells Universal NETwork. This software can use
the LAN connectors on the Falcons to setup a very nice network. You
can mount the drive or drives from the other system and access it just
like a local drive. The software also works with Midi. You can have
more than one network between the systems. An example is both the LAN
and midi at the same time. The software also supports a cartridge high
speed network that was sold in the '80s. At one time, I had a TT and
Falcon connected with the LAN, a MegaST connected to the TT with midi,
and a ST connected to the MegaST with the cartridge lan. I was able to
read and write to all drives from any system. The ST was in my
daughters bedroom and the MegaST was in my sons bedroom.
The cost of the software is $149.00 for a two node network from
MacDonald Associates. You should check with places like B&C
ComputerVisions to see if you can find a better price.

1450. ** WTB: Atari Jaguar **

Newsgroup: comp.sys.atari.st
Date: 1997-04-25 00:00:00 UTC
From: quantum@sunlink.net
Message-ID: <5jovdj$jlu@mars.sunlink.net>
Source record: 123377

I have a friend who's interested in starting himself with an
Atari Jaguar. Since Atari's out of business, I was wondering if the
price of them has shot down and if anybody out there has one they're
willing to sell. Of course, if you know of a retail place that has a
good price on them that would be great too.

Thanks in advance for any responses, preferably through email
(I don't get to read this great newsgroup nearly as often as I wish
too :<).

Formatting normally wipes the whole drive; in your case, you want to clear
just one Minix partition.

If this 11 Mbyte partition is just one of 4 , then formatting will wipe
C,D & E also.

You need to clear the partition, Minit allows conversion of a Minix
partition back into a TOS one. I forget the exact syntax, but the
instructions are included in the Minix docs, & also if you run Minit with
no parameters.

Yes that is correct,but a quicker way is when you see the ICD LOGO on your
screen,just press any drive key,and you will boot from that drive,then you
can remove the offending prg or acc from your boot drive which is mainly C.

I have seen a picture if this machine. The Micro Falcon. Realy realy
nice. 3 32-bit expansion slots, a small compact motherboard, about
half the size of the Falcon030 and in a nice beutifully designed case
with a seperat keybord. _EXACTLY_ how the Falcon should have looked
like! Apparently someone has got one working Micro Falcon out
there... and B&C Computervision supposly has got a bare motherboard.

Doesn't you just hate those Tramiels from time to time? Arrghhh...

I'm fairly sure that version of Marcel allows you to print, but Print
appears in an odd place in the menu. Load a file, and go to the Options
menu (*not* the File menu), and you should see the Print option. You
also need to load a printer driver.

As to hensa, the reason is almost certainly that hensa has not been updated
for some time (at least this item) so the shareware notice is still there.
Marcel is now freeware, but if you want a printed manual there is a charge
(the address for shareware fees may not be the same as for a manual).
Danny Bhabuta, who was the UK shareware support, has confirmed that it
is freeware.

The limit is exactly 1 GByte.

> if you attached a larger HD to the Mega STE? Would I be able to
> define two partitions under the size limit or would the Mega STE not
> recognize the space above the size limit?

Sectors above the limit cannot be accessed, anything else works fine.
With a third party host adapter like the LINK96 and CBHD or HDDRIVER as
hard disk driver you can connect hard disks of any size, i.e. with this
adapter there is no size limit.

> I heard some rumors that there is a 500Mb limit on the SCSI controller
> and wanted to confirm or deny this rumor.

This is a rumour. The limit is 1 GByte and it is imposed by the ACSI bus
architecture. The ST/STE has no real SCSI controller at all, only a host
adapter.

Date: 1997-04-25 00:00:00 UTC
From: donnelaith@geocities.com
Message-ID: <33607F6D.577@geocities.com>
Source record: 123393
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I would just like to mention that Monochrome is WAY faster than 16 color mode. In monochrome, there is only 1 bitplane, screen memory can be shifted byte for byte. In 16 color mode, there are 4 bitplanes and unless you are moving screen memory in even 8 pixel increments, the VDI routine has a lot of calculation to do.

Do the math:

320x200x16 colors = 32000 bytes

640x400x2 colors (mono) = 32000 bytes

640x480x16 colors = 153600 bytes

1280x960x2 colors (mono) = 153600 bytes

Of course a 32k screen will update faster on a MegaSTE than a 153k screen will on a computer that is NOT 4 TIMES faster...

It would be nice to clear some smoke and figure out what "faster" really means. I certainly don't have all the answers but I wrote this program to try and figure some of them out. I just received some Falcon results recently and the machine ran some tests 40% faster just because they ran without any ACCs! I try to dig a little deeper into things and see how they work before I write off results as being bogus.

just my thoughts...

1468. Tonight Show Supports Atari! (Trivia)

Date: 1997-04-25 00:00:00 UTC
From: mgrove@owens.ridgecrest.ca.us
Message-ID: <5jpn67ksh2@ash.ridgecrest.ca.us>
Source record: 123395

Monday night on the Tonight Show with Jay Leno, Jay was informing the viewers how to access their web page. He said " If you have one of those PC computer things, you can reach us at the address below, or I guess you could hot wire one of those Atari game machines as well if you have one." It brought a good laugh from the stage as well as my home:).

I thought it even more funny that he didn't say "or a Mac".:)

I wonder if he knows what a Falcon is?

Mike

I think you two are talking about two different machines:)
The Falcon has what is referred to as "ST" Ram, which
is expandable to 14mb. On the ST, it is not so easy:).
No, your SLM will not work with a Falcon. At one time there
was talk of a device called the "Heat Seeker" that would give
the Falcon a DMA device connection, but I don't think it ever
made it to market outside of Germany, if it ever was produced
at all.

Hi Todd
I sent an email but it was rejected, maybe I used the wrong name.
I have Wordwriter from Timeworks, and the disks are the original prg.
and dictionary disk along with reg. card, manual/binder and binder sleeve.
If you're interested, contact me at bsummer@delphi.com.
Thank you.

Hi Joseph

In article ,
Joseph M Hogan wrote:

> I like this news. But, where is the final freeware version?? I have
> v2.34, which does not allow printing. I got it off of hensa.

The version you got from HENSA is the latest version... and yes, it is
Freeware/Shareware

> Secondly, if it is freeware, why is there a note in a lot of the
> programs off of hensa included in a list which tells you how to register
> the shareware program(Marcel is on the list). Are they falsely
> collecting money(no flames here, I am asking for an answer, so I can
> proceed correctly).

Firstly, HENSA does not collect any shareware fees.. it is a software
repository and provides an extra service by listing various details about
programs in the software list (more than any other FTP site does).

HENSA has not been updated for a while, mainly because there is no one
there to look after the Atari section. That said, if you email Atari
software to them at syspds@micros.hensa.ac.uk then it will be uploaded..
and to reduce their work (and make sure the software is placed on-line)
it is a good idea to send them the filled in .MSG file too (as tagged
with all software they have).

I placed Marcel on HENSA and when it was first placed on there it was
shareware. This changed over the course of time and even though the
software is free to use, if you want to 'Register' your product and
receive the Manual and function key guide, you pay the 'shareware fee'
set at 5UKP. Please note this is only available via CyberSTrider.

Various circumstances have prevented me from updating documentation in
various pieces of software supported by CyberSTrider, held in various
BBSs etc. All software documentation will be updated (I was waiting for
the change of addess to take effect which it now has)

Briefly, the address to send all CyberSTrider registrations to is

CyberSTrider
PO Box 2023
Wickford
SS12 9RX
UK

Latest list and order form are available from my web site:

www.cyberstrider.org

Hope this helps... Please look out for the official posting of address change on c.s.a.s

Regards
Danny (Denesh Bhabuta)

Yes, but would just doing multiplications/additons without graphics
output cause such a huge difference? Normally you doesn't output alot
of stuff to the screen while doing the calculations like
packing/unpacking loading etc. or am I wrong?

> Well I am a little fed up of reading so often definitive opinions about products.
> Reasonably, there are in most cases pros and cons in this matter.

Sorry, but I can't say that I like Wercs. Okey it was good when it was
released in 98 or something but if you want ot do some fun stuff you
realy need a better resource editor. For regular resource files using
mono it's okey but not if you have got colour and wants to do some
more advanced stuff.

> I have been using WERCS for years, and I have developed dozens of resources with
> it, with no problem. Is that such a crap?

Maybe it's wrong of me to say that it's crap, but it's very outdated
and can't do what the "new" can do. It doesn't realy support AES above
3.3 with 3D objects, colour and colour icons.

> OK, I run a MegaSTE, so I don't know about color icons.

Yup and if you use it for pre Falcon programs it's fine.

> For WERCS vs MAGIC, whose fault is it? HiSoft used to have excellent developpers
> and to produce cleanly programmed utilities.

They do? The compilers are fine but the tools to use them with isn't
exactly that cool. I realy can't stand the editor supplied with
Lattice, but I wouldn't either want to live without the integrated
developing enviorment which it supplies. :-\

> I am not setting up a debate. I just wanted to say: "Please don't fire so easily
> on commercial products that are respectable in many aspects, because they are not
> so many".

I see what I you mean but I agree with you 100%, but Wercs is old and
ther are much better programs to do the job for you.

>well as their developpers kits.

I think that is expecting far too much - after all, what if TOS/GEM were to suddenly become really popular (yea, right) - they would have given away all their rights and advantages...

Atari probably dont have easy access to any docs/sources/hardware anyway, so building such a collection of software/docs would probably be quite a difficult task...

nice idea, but certainly not practical...

1479. SOFTWARE RELEASE: KP SACK 1.0 and SAM 1.3

Newsgroup: comp.sys.atari.st
Date: 1997-04-25 00:00:00 UTC
From: jacquesa@cs.man.ac.uk
Message-ID: <5jq9oa$6rg@m1.cs.man.ac.uk>
Source record: 123406
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer,comp.sys.atari.st

I would like to inform you that KP SACK 1.0 - SAA Construction Kit - is now available for download either from various FTP sites, or from the Kosmik Phish homepage at:
http://www.cs.man.ac.uk/~jacquesa/kpp/

For those who are not aware of what an SAA file is, it is a way of creating new events which sounds can be assigned to via SAM. KP SACK provides a simple interface for creating SAA files and makes it as easy as possible to make use of them within your own software. To make full use of SAA files, you will need SAM 1.3...

SAM 1.3 is an (officially sanctioned) bugfixed version of Atari's System Audio Manager, which allows the user of an Atari system with DMA sound and TOS 2.xx or greater to assign sample sounds to system events such as window manipulation.

For more information on either of these programs, either visit our WWW pages at the above address, or read Atari Computing.

Hi,

I know you want to use the power of those 2 falcons at once{:-)} but I thought you might be interested in another solution. I use both CAF & Zero-x at once on a single falcon with Geneva. All you need is a dongle expander. I use an old c-lab combiner & it works like a charm. You do have to put the program you're not currently using to sleep & also manually change the dongle in the expander port (such work it is pushing buttons all day long!) but stil no rebooting, or even quitting programs. BTW I do have 2 falcons as well but I'm saving the 2nd one for that inevitable 'breakdown in the middle of a deadline crunch' problem which is the reason that I own 2 falcons now. Let's face it, at this point in time atari isn't likely to provide backup if disaster strikes...

hope this helps,

David Klimchak,

Hi,

A friend of mine wants to connect to the Internet, basically to be able to use E-mail and Usenet. He has an Atari ST and a 2400 baud modem. Where can I find the software he will need for this? I was thinking a log-in app such as PPP of SLIP, and apps for e-mail and Usenet.

Please e-mail me, as I don't regularly visit this group.

Thanks a lot!

Hi
I've been having a semi-problem with SAM on my Falcon.
For example:
I load up the samconfig.acc, and assign a sound to the start up
(for example) and it quite frankly sounds like dragging a needle over
a record(for those of you who remember records, u know 33-1/3, 78?)
However, when I reboot the start up sounds just fine!?
Why does playing sounds sound terrible in SAM, but assigned sounds
both in and out of SAM sound OK?
anyone have or heard of this problem?
thanks.merci.danke.slainte mhath.tusen takk

Give him my best regards.

As best I understand it, AtariNet was brought in to this part of Canada through a Vancouver node of FidoNet and the operator of the node just got 'burned out' with the amount of stuff he was receiving. He was sorting and organising the FidoNet, AtariNet and whatever, feeds into some degree of rational order - and when he gave up, there was no one else with the equipment or time to handle the load.

Anyway, we lost AtariNet connection about three months ago and I was told the same condition applied to all of Canada - but I can't be sure on that.

I just managed to find this thread on the local freenet after some fossicking around - but it is totally 'non graphic' and I have not taken advantage of the CAB/Stik capabilities possible.

But we are really feeling lost out here. Computer Direct tries to keep us supplied with goodies, but we keep losing user group members to Windoze and Mac - but - we keep on trying to keep on - despite the lack of info, tech support, news, etc.

Now I know how the Sinclair and Adam users felt !!!!!

I have found a 2nd hand Atari SML 1840 (i think thats right!) laser printer. Does anyone know if this printer will take any standard PC laser ink cartridges? because theres no way i can regularly get hold of Atari specific equipment here. Also how compatible would this printer be for use with non-atari platforms as i would want to run it with my PowerMacs aswell as with my good old STFM. Would be greatfull if anyone has some knowledge on this printer. Thanks a lot :-)

You could also go for the Magnum card that'll give you 8mb fast ram in
addition to the 4 or 14mb ST ram. More info from "aixit@aol.com".

Or, even better, wait for the Centurbo 2...

: with TOS 1.00.

Hmm... That's not what I was told. The ICD manual that I read, cover to cover when I got it, said TOS versions up to 1.2 could handle the boot partition, the first partition, size as 16 megs, and TOS 1.4 and up size as 32 megs. That's what I see on my partitioning the drives on my MegaSTE4. They were referring to the partitions after the first as BGM partitions. I forget what that stood for.

I don't remember seeing something like 256 megs.

Why not try a Mac? I finally had to do something--to make proper use of the 'net, etc. But I still use the 1040 for music. And the Mac will read the ST disks. Just a thought.

What makes you think that Apple will increase the charges? What you
may have heard is the clone firms bellyaching that there might be a
increase in price when Mac OS8 ships, but not the outrageous figures
that have been reported as rumor..

Again...Please provide evidence that Falcon's are cheaper..What part
do you not understand?

Plus there is no equevelant Falcon compared to the current PowerMacs
today. A PowerMac Performa 6400/180 goes for $1099 new!

Price includes 16 megs, 1.6 gig, subwoofer, keyboard, 8x CD, 28k
modem
and software bundle..

No, it was quite inexpensive considering the performance.
Hardly a hack and slash. This is actually one of the
nicest jobs I have seen for the Falcon. It is really just
plug and go. Blows your mac away i'm sure.

>
>My 4x CD is fine...Nice Sony one...

Owwwww, 4X. Get a life. That is like hanging a cowhorn
on the front of a Lexus.

So. Go for it. I like my Falcon better. I can rest assured that
I won't be crying because the Mac I bought yesterday is outdated

by a newer model tomorrow. Mac users will be going through the
PC-Pentium speed trip for quite some time, at least those that
can afford it.

I have a Monitor Master for my MegaST-2 for switching between my SC1224 and SM-124 monitors. It works fine, but i have a question about it. What is the RCA jack marked 'Video' used for? As far as I've been able to determine, it doesn't output a standard NTSC video signal. I don't have the book for it, so can't look it up, but have always wondered about that. Thanks.

This definitely looks interesting and I have grabbed the demo.
It is expensive... and also looks a bit like overkill for what I want
but I may be tempted.
At least it looks like it could exercise that Eurocheque book that I got
to register German shareware and then used little after Joe Connor set
up his scheme.

I had this problem, but it was easily rectified it I just gave the whole case a small sharp turn as the power came on, and it would help get the platters spinning.

Dataquest figures.

> Apple just laid off a couple of thousand
> employees [etc etc]

Apple sales are down, Mac sales are up. Dataqest predicts a big rise
this season, they say that the Macs have more bang to the buck than ever
before, apprently many people and businesses buy in 3 year cycles and 3
years ago sales were huge.

>
> I don't remember seeing something like 256 megs.

This is true is you use normal cluster sizes (512 bytes I think), most
drivers support larger cluster sizes than this, the disadvantage being
that smaller files are rounded up at greater intervals. Ie if you have
4k clusters then a 2k will tkae up 4k, a 17k file will take up 20k etc.
BGM partitions use larger cluster sizes and I although it seems logical
to that it would not work, I just booted up from a 100 meg partition 10
minutes ago, so it does :).

I don't know how the ICD drivers will work with the Link. I assume it
would work fine. I recently got my ZIP drive up and running on my
Falcon with it being the middle unit in the chain and using AHDI
6.061.

The LINK 1 won't work, for that I'm pretty sure. You need a Link II or Link96. (Anyone know if I'm right about that?) As for the rest, ICD will work, the ZIP drive has a terminator you can set to on or off, so as for where it has to be on the chain, it can only be set to ID 5 or 6, but the rest is up to you (you also need a cable to supply it with power from the cartridge port (MIDI?), as I believe that the ZIP drive needs more power than it gets from the port.)

How did the driver identify itself when it worked?

I> I have a floppy with some files in an auto folder (ICDBOOT.PRG &
I> ICDBOOT.SYS) but the drive still loads from C and ignores the a
I> drive.

Good. Just run ICDBOOT.PRG (like you would any other PRG). It will usually
find the HD. If you have ICDUTIL as well you can then install the booter on

You must use upper case "C" to "Install" a hard drive. Lower case is assumed
to be ROM port.

I> I have now managed to access the hard drive drive!

:)

I> Any idea where I may be able to find updated drivers?

I have adopted Claus Brod's driver. It has worked flawlessly for around 6
months. It is Freeware and goes under the name of CBHDnnn.TOS (a
self-extracting archive). The latest "nnn" is 502 but I have stuck

Try 'The Player' from Midiart. You can download a demo from:

http://www.midiart.de

It has a jukebox-function and can even be controlled with your
midikeyboard. I like it very much (but it is still a bit too expensive for
such a little program)!

karsten.

Hey Terry! It may help to know where/how you're getting your issues of STReport. Are you getting them via a mailing list, or downloading them from somewhere (BBS, online service, web site)? I'm not sure what your "multi disk" comment means, but I have a feeling that you're getting the issues that have been uuencoded. What this means is that the issue is archived with a ZIP utility, and then encoded so as to allow the file to be transferred via e-mail.

To tell if the file has been uuencoded, load it into a text editor. You should see the majority of the file with an M in front of every line. The file may also be MIMEd - if so, it will appear differently.

Let me know how and where you're getting the files and I can be of more help.

Yes its called CNV2GIF and was available from the FaST Club in UK cat nos. GR.422.

Their Fax Nos Was(!) +44 115 945 5305 but maybe they have a Web site these days?

Also ViewGif which is the Atari Library on Compuserve... maybe CNV2GIF is on Compuserve too??

If you mean you got it by email then you will need to UUdecode it, a
program like Essdecode should do it.

Teh ICD drives are absolutely fine, as is HD Driver.

> I assume it
> would work fine.

Nope :-(It will *NOT* work with the Link 1, I know I had one and had
to get the Link 2 for it to work. On the brigter side, as long as you
can get a Link 2 then the Link 1 should fetch a reasonable price 2nd
hand.

I don't see the Mac dying, either. Apple has had a far stronger foothold
in the computer marketplace than Atari ever did. Couple that with the
fact that Apple will never abandon it's customers like some other
companies have done, and I think the Macintosh will be around for quite
some time to come. They will probably never control the market, but that
doesn't really bother me.

I use two Falcons, but i don't have CAF.
Xero-X cant take some file from the second falcon over a romport interface..
The Software is MidiCom, always nice for a serial transfer.
Ask Dieter_Cotta@KR.maus.de for romport interfaces.

So i have a transferrate of 160Kb/sec between both machines.

> IS there any software using the LAN conector?

MidiCom..
Ask Harald_Blees@KR.maus.de, that's the best way to get the latest info.

Regards, Robert

Brett Nair <dogmeat@fog.net> wrote:
> FATAL: Couldn't run /usr/multitos/Init.prg Exit Code 33
> [CRASH]

33 normally means "file not found".

/usr/multitos is actually a symbolic link to "\MULTITOS" on your root partition, i. e. usually C:\MULTITOS.

After installing the KGMD you were asked to create this symbolic link by typing

ln -s /c/multitos /usr/multitos

Possibly you haven't done this so far. If this is the case add the line

sln u:\c\multitos u:\usr\multitos

to your mint.cnf just in front of the line that starts with "INIT=..."

Make sure that there's really INIT.PRG in c:\MULTITOS and reboot.

If everything ran alright remove the line you've added to your mint.cnf. You dont need it anymore.

Hope this helps you

Guido

> it gets from the port.)

The only time that the Zip needs extra power from another port (usually
the joystick port BTW) is if it is on it's own as an external device AND
is used with a SCSI adaptor like the Link 2. Seeing as the origianl
poster siad they had 3 other devies on the chanin then this should pose
absolutely no problem atall.

I have a dead 520STm thats been laying around, most of the chips are probably OK, what can do with them? I've been thinking, it would be neat to take the YM2149 chip and kludge it onto a PC (parallel port maybe?), for use by emulators. Or what about that hack that doubles your pallette by adding another shifter? Or another serial port by adding a second TT-compatable MFP? Replies by Email...

Yes, I believe it is.

>when you just want to view pics. Any chance you would make a stripped down

IIRC, the default configuration as supplied should draw images
automatically when loaded. The startup dialog is turned on, though.
Is it the dialog that's confusing, or what?

Suitably configured, MGIF can also operate as a plain image viewer.
That is, run automatically when an image is clicked, draw the image and
wait for a key press to exit.
Slideshows are also easily done.

>viewer?

I actually did write some dummy routines once to make a 'dummed down'
version of MGIF possible. There were a lot of things I didn't want to
leave out, though, (GIF/JPEG/Targa/(X)IMG support, configuration,
quantization, scaling and a couple of other things) so the resulting
executable was still about 100 kbyte or so, IIRC.
I decided that this wasn't worth the trouble, but maybe I was wrong.

I'm always open for ideas about MGIF.
If you want something new for v5.10, you'd better let me know real soon,
though, since I'm trying to get that one completed now.

```
POPwatch is a POP3 mailbox tool for use with STiK and a POP3 mailbox.
Using POPwatch, you can see what email exists and selectively
download the waiting email into either Oasis2, NEWSie, or NOS/Oasis1.xx
You can also delete unwanted email either manually or automatically
via a kill file facility without having to download it.
It is not meant to be a full mail client, ie. you cannot edit emails,
post replies etc. It is meant to complement your existing email client
and offers features not found in them.

POPwatch v1.00 is now available from my website (see .sig).

If you have been using earlier BETAS, then I urge you to upgrade to
this version straight away.

Thanks for your support, and many thanks to all the people who have
sent me bug reports and suggestions. It's been much appreciated :)

Just follow the documentation file, and you should be fine.

It won't fall over and take the system with it. I've had it running
before, and it's never had one of those crashes that throw me back to DOS.
A couple things in the .INI file were wrong, and that caused it to error
out a few times. Also, .43 is out. I just got my copy. It looks like it's
now got the ability to read the floppy drives.

You may also want to try STonX, the DOS version.

1543. FORSALE: Atari Falcon030

Newsgroup: comp.sys.atari.st
Date: 1997-04-27 00:00:00 UTC
From: Greg Linder <fluke@mcs.com>
Message-ID: <Pine.BSF.3.95.970427181256.28720A-100000@Mercury.mcs.net>
Source record: 123176
Cross-posted to: comp.sys.atari,misc.forsale.computers.other.systems,misc.forsale.computers.other.misc,misc.forsale.computers.other,comp.sys.atari.advocacy,comp.sys.atari.st

I have forsale the following system, approximately four years old.

Falcon Information:

System Contains:
Falcon 030 motherboard with:
* 4 megs ram
* 68881 Mathco processor

365 meg SCSI HD(2nd 3.5" bay)(4 partitions full of software)
1x CD-ROM(1 5 1/4 bay)
1.44 meg floppy(1st 3.5" bay)
2 open 5 1/4 inch bays, 1 open 3.5" bay

This machine was recased by me, and the ports that I chose to
bring to the rear of the machine are:
Audio in/out(left/right RCA jacks) NOTE: THE only problem with
this machine, and the only thing that has _ever_ given me trouble on this
computer has been the left audio input channel. I think it is the plug
on the motherboard, but I am not quite sure.
Another note about audio:
There are three front panel switches, one turns on/off internal
speaker, one switches audio input to the mothberboard between the internal
CD-ROM audio out and the raear panel audio in. The third switch deals with
switching the Falcon motherboards audio out between the audio out RCA
jacks and the headphone jack, also located on the front panel.
The reset switch on the front panel functions.
The keyboard is a TT030 keyboard, missing the F8 keycap. This
keyboard has a keyboard reset switch installed internally, accesseble via
the plug bay at the rare of the computer.
Video out with Screenblaster installed internally is brought to
the back panel.
Parallel/Serial brought to back panel.
MIDI in/out brought to back panel.
Composite Video brought to back panel.

This machine works, and I shall include with it:
*VGA 15 pin video adapter
*ST monitor plug adapter
*All necessary cables
*No monitor
*All manuals/original disks that I can find.

Bidding starts at $650. I shall sell the system for the best
offer.

I am interested in buying the LINK II or LINK 96 for the Atari ST series of computers. I am currently using the orginal LINK right now with my Atari Megafile 30, Conner 100 meg drive, and my 1X CD ROM drive. I would like to use a ZIPDRIVE on it too, but according to people here, I need a LINK II or LINK 96. QUESTION: Will Link 96 work with a STe? Also, is it possible to use the ZIPDRIVE as my Macintosh disk drive for Spectre GCR version 3.0??? My friend said I can get System Software for it (since versions prior to 7.0.0 are public domain according to Apple). Thanks...

It's possible to share an scsi drive with another machine. The driver just have to support the scsi-id arbitration (like HdDriver). Caution with the id numbers (they have to be different - Falcon id is 7).

This Sunday, I went to a flea market that someone told me about and after looking all over the building I 'stumbled' across a mother load of Atari games. Since I had only a few bucks on me I got Demon Attack, Dragonfire, and Keystone Kapers...games which I wanted as a kid when they first came out. Very good games even if the carts themselves look beat up.

Anyways, the guy showed me a box of controlers and he had a Booster Grip that you put on a plain 2600 stick to use with Omega Race. He said you can fire faster with the trigger button so I guess it's useable on other games.

Now my question is would somebody have an Omega Race cart availible fo sale or trade? I'm also interested in more info and comments about the Booster Grip which I can't wait to analyse on my XE :)

I'll go back next week to get it and Tac Scan...

mlake@melake.erols.com (Marshall Lake) wrote:

M > Can anyone tell me if the CaTTamaran is easy to install? Does
M > it require soldering? Does anyone know if it works okay with
M > Linux?

I can tell you that Alex at ATY is currently /removing/ my CaTT.
Specifically, with the CaTT installed my fpu went into the tank (~24
bombs) whenever accessed. Since Linux depends on the fpu, although
the latest versions do not (so I hear), your CaTT will have to work
lots better than mine did.

Alex sent me email recommending strongly against the CaTT. Sorry if
this seems to be restraint of trade - I loved the faster operation
with the CaTT, but was not able to tolerate the lack of fpu usage,
especially when CAB started accessing it. The CaTT dox mention a
possible fix, btw.

Actually, as another long-time Atari user pointed out, it is really
a thrill to find programs that /do/ use the fpu when available. The
Texel demo does, CAB now does, clip rotation in Touchup, Bill
Penner's Satellite Tracker, DynaCadd, and maybe more on the way.
Things are looking up! - but not for the CaTTamaran.

If it is any consolation, Alex says that he did get 3 CaTTs out of
15 to work. Not good enough to suit him, nor me.

I'm looking at a T60 - linux should move right along on that box, if
it will run at all. Anybody know for sure?

I've only been lurking on this group for a couple of weeks, so maybe the question's been asked before -- I am unable to get access to my CR-ROM drive from Magic. I'm running the latest version of Extendos (2.3, I believe), and version 5.03 of Magic. I can run the CD audio player accessory with no problems under Magic, but I cannot get the data drive (P) to show up.

(My setup is a Falcon 14Meg, standard video, booting up with Magic, NVDI 3.something, Extendos, Maccel, and -usually- hsmodem and stik.)

The CD-ROM is a quad-speed NEC-222.

1558. tt ram

Newsgroup: comp.sys.atari.st
Date: 1997-04-27 00:00:00 UTC
From: orb@u.washington.edu
Message-ID: <5juimd$qt2@nntp6.u.washington.edu>
Source record: 123235

I just upgraded my TT from 4 to 16 megabytes using 4 meg, 9 chip simms (I couldn't find any dealer with 8 chip variety). I changed the jumpers on the daughterboard to the 16 meg setting.

When the TT boots, the display shows "X" going across the screen instead of the familiar "-" as it does the TT memory test. It bombs while running auto folder programs & reboots. I changed jumper W105 to the non-burst setting on the ram daughterboard, and now everything seems to work.

Is their anything wrong with these simms? Should i try and return them for ones that can do "burst" mode? Am i losing much performance?

thanks
-kyle

1559. which monitor for all resolutions?

Newsgroup: comp.sys.atari.st
Date: 1997-04-27 00:00:00 UTC
From: orb@u.washington.edu
Message-ID: <5juj3n$1ep0@nntp6.u.washington.edu>
Source record: 123236

What type of monitor will give me the choice of the most resolutions on a TT? Currently I've got a TTM195 which is *great*, but it only allows TT-high resolution, and monochrome at that. I'm finding most software won't work in this resolution (or on the TT at all...).

Will a normal vga monitor handle the other resolutions? If not, what will?

thanks
-kyle

1560. CaTTamaran & Linux

Newsgroup: comp.sys.atari.st
Date: 1997-04-27 00:00:00 UTC
From: mlake@melake.erols.com
Message-ID: <slrn5m4npv.p63.mlake@melake.erols.com>

1561. Mini Sized Falcon Circuit Board?

Newsgroup: comp.sys.atari.st
Date: 1997-04-27 00:00:00 UTC
From: csilver@kendaco.telebyte.Spam.This.com
Message-ID: <5juo7a$bfh@news.telebyte.com>
Source record: 123238

Hi All,

While scaning DejaNews post to this NG, I "think" I saw a post or a link to a discussion about a mini sized Falcon circuit board. Is this true or is it vaporware? If it's true, could this circuit board be adapted to a hacked laptop?

Solder Gun and Dremel Tool in Hand!

Charles

Burst mode will only work with nibble mode simms. They are hard to
find and can cost almost twice as much as standard simms. Non-burst
ram is not as fast as burst ram.

->Could anyone provide a copy of this printer driver or point me in the right
->direction ?

I don't know what drivers come with Cubase, but its possible another driver
(e.g. HP laser) might work. Or if your printer has an Epson mode. Or you
could try Steinberb at:

http://www.steinberg-us.com

Then there is the Cubase email list, let me know if you want details on
that.

From: leslieh@valis.worldgate.com
Message-ID: <5jvbm0$bq4@scanner.worldgate.com>
Source record: 123244

Linda Peckham <lpeckham@sky.net> wrote:

: I've only been lurking on this group for a couple of weeks, so maybe
: the question's been asked before -- I am unable to get access to my
: CR-ROM drive from Magic. I'm running the latest version of Extendos
: (2.3, I believe), and version 5.03 of Magic. I can run the CD audio
: player accessory with no problems under Magic, but I cannot get the
: data drive (P) to show up.

: (My setup is a Falcon 14Meg, standard video, booting up with Magic,
: NVDI 3.something, Extendos, Maccel, and -usually- hsmodem and stik.)

: The CD-ROM is a quad-speed NEC-222.

I presume that the CD player works under SingleTOS, so...hey! I just noticed the problem. Upgrade to ExtenDOS (Pro) <-(that's likely what you're using) version 2.4. ExtenDOS Pro 2.3 and MagiC 4/5 do not appreciate each other very much. You will have to upgrade from 2.3 to 2.3a to 2.4. Then, you should not have a problem. To be honest though, I can't give you a specific URL to go to for downloading these files. Okay, I lied...(I love using Linux!) ftp.funet.fi/pub/atari/cdrom/epro_240.zip and ftp.funet.fi/pub/atari/cdrom/epro_23a.zip. So, if you are using a shell account, you'd enter ftp://ftp.funet.fi/pub/atari/cdrom/ and download the two files epro_23a.zip and epro_240.zip. (Obviously, there'd be a [Return] after the ftp address).

If I've made you even more confused, let me know, and I'll send them to you.

Source record: 123245

Hi folks....

Just read a couple of messages about how TT's are still wanted, i was
wondering how much i would get for mine now...

I bought mine about 3 years ago and it cost me 450UKP, i upgraded it
with the CDII and the TT-RAM just after i got it, but i haven't used
it for ages (i use my PC now).

Can someone give me an idea how much mine is now worth (in UKP)

TT030 (TOS 3.06, 1.44Mb FDD)
540Mb Quantum Fireball HD
4Mb ST-RAM
8Mb TT-RAM (MegTT exp to 128Mb)
Crazy Dots II (1Mb)
NVDI ET4000
Tabby
Mitac SVGA 14" LR Digital OSD monitor

many thanks

Mark

The Zip has to have partiy enabled, the Link does not support parity.

Not at all, because these two programs don't make any use of the FPU,
you can gain in speed by using the DA'S programs series (Vektor,
Layout, Picture ...) because they use FPU since the beginning ...

In fact not very much programs do use the FPU, but if you are using
raytracing programs, they often have special versions to use the FPU
and gain not only in speed but in time ...

In my old MegaSTE I had put a 68882 FPU and a little auto program to
make it efficient with the programs I have just talked about.

Jo

Note: surely some people could better answer to this question by
giving other programs using the FPU ... there are a few

Hello,

I have just got a C-lab Falcon II. I have connected an external SCSI hardisk, which is properly terminated, to the Falcon. However, since I do not have an internal 2.5" SCSI harddisk, I am wondering if I need an internal SCSI terminator.

However, when I run my Cubase audio Falcon, I just got the message "SCSI error 2" when I play back the audio file just recorded.

Any ideas? Please help and send email directly to me. Thanks.

Source record: 123256

Hello,

I've just been given an Atari 1040ST, just the monitor, computer and mains cables. Nothing else. I have a few questions.

1) Can it read PC disks? (probably not but it would be useful)

2) Are there any utility disks that should have been supplied with it?

3) As I only intend to use it for its MIDI card, what software is available to act as sequencer and patch librarian? A UK dealer would be nice.

Thanks in advance.

1586. FS: TT030, ramboard

Newsgroup: comp.sys.atari.st
Date: 1997-04-27 00:00:00 UTC
From: orb@u.washington.edu
Message-ID: <5k0bi3$1d2o@nntp6.u.washington.edu>
Source record: 123263

I've got the following forsale:

4 meg TT ram expansion board for a TT030 machine. Model CA400312,
comes with 4 megs, and can't be upgraded to 16 without some serious
modifications. $115

Four 1 meg 30 pin simms (these are in addition to the simms for the
above ram board). These were used in my TT at one time, i've since
upgraded. Non-parity, 8 chip, nibble-mode. $30

my spare TT030, which has seen better days. The previous owner had
removed the screws (!) so the top can come right off. No floppy
drive, 2 megs ST ram (stock), 48 meg scsi drive with some software.
The power supply fan makes a wierd noise, but otherwise works fine.
Make an offer, would work great with the above ramboard.

email offers to orb@ee.washington.edu, I'm located in the Seattle area.
thanks
-kyle

Has anyone had luck using the new cab.ovl 1.25 with GlueSTiK? I have tried both the standard version and the 030 version with my TT, and both give me #600 errors. I am using the latest CAB 2.0 demo and the latest GlueSTiK. Everything works fine with earlier versions of cab.ovl.

The latest version of TelVT102, the VT102 Telnet for STiK
is now available on:

http://www.flinny.demon.co.uk

This version has a number of display bugs fixed, and permits
reading of local files including the display of the VT102 Graphics test
files included.

It is Version 2.01, and is listed as TVT201.

P.S. If you try it, and find any bugs, let me know.
If you like it, let me know. If you don't, let me know. Feedback helps.

I think that GEM, which is a Digital Research product, never really took
off on the IBM PC or clones. It did find a home (about 1985) in the
Atari ST
line of computers. These computers are based on the Motorola 68000 line
of chips.
GEM *did* have its own line of programs which made use of the GEM
windowing
interface. These applications were a bit too expensive, IMHO. I know
there
was GEM Draw and a GEM word processor. Probably there were a whole lot
more.
These applications did *not* make it over to the Atari ST.

There are still active Atari ST groups on the Usenet--perhaps you could
post
there for more info.

Hello!

I have a Mega ST4 and a monochrome Monitore SM 124. Is it possible to
use a colour Monitor instead of the SM 124.
What will happen with the software that only runs with high solution
(640 x 400) and black and white?

Can I use this software further on f.e. CUBASE SCORE?

In France we are lucky for that. We have the "Minitel". A typical french
commercial network working since 1982. I'ts hurgly (most of terminals are white
and black), slow (1200/75 bauds async) but everyone can use it. The terminals
were (to 1992) freely provided by the national phone compagny. With this
service, you can buy, look for the call number of anyone in France and in
several countries in the world, read railroad informations, but also chat
and read and write in something like newsgroups. It's by this way, that atarians
can chat together and find internet connection solutions (like the pppkit).

We have an another chance, we always have a magazine (and soon a second with
cd-rom made by atarians. A firm as been created specially for that).

I have just bought HDDRIVER... but I have been using ICD 6.5.5 Pro for a long time now on my Falcon and it works fine with an Iomega Jaz and Fujitsu magneto-optical. IIRC you need the 'pro' version of the ICD software to get the full features when there isn't an ICD host adaptor in the chain. On the other hand read caching doesn't seem so valuable as it used to be so perhaps the non-pro version would be adequate (I think it should run, but without caching).

You need a new System disk. There is something corrupted about your
System or Finder. Can you get another copy of System 6.0.x from the
same source or another friend with a Mac? That should get you back in
to your hard drive.

Marshall Lake <mlake@melake.erols.com> wrote:
>
>Can anyone tell me if the CaTTamaran is easy to install? Does it
>require soldering? Does anyone know if it works okay with Linux?

Hi Marshall.

Have had two TTs with CaTTamaran's. In both it works fine for normal
Atari uses. Under Linux, it works with one of the TTs but not the
other. I forget now why it didn't work with the one. When it does
work it reports bogomips around 12 something. The other TT with
CaTTamarn still worked but you just couldn't run at 48MHz on the CaTT
while using linux. Wayne

1612. Re: cab ovl 1.25 and GlueSTiK

From the Holy Book of <5k2gvn$t8u$1@cti01.citenet.net>
as spake by q-funk@REMOVE.ANTI.SPAM.FIRST.megacom.net (Martin-Eric Racine) :

>GlueSTiK currently emulates STiK 1.11 afaik, so it *should* work,
>given that CAB.OVL 1.25 was tested on STiK 1.12, 1.13 and 2.00b.
>However, it *is* possible that GlueSTiK doesn't even match 1.12.

Depends on how much difference there is between 1.11 and later versions.
I'm betting there are some new function hooks in 1.12, and that newer
version of CAB.OVL are using them without checking to make sure they're
actually there. I'd be happy to update GlueSTiK to cover more recent
versions of STiK, if I had the necessary information to do so.

From: Terence Kelly <kelly_t@mail.uwlax.edu>
Message-ID: <3364C732.299F@mail.uwlax.edu>
Source record: 123094

The SC1224 is the color monitor that goes with the Mega. It will not display 640/400, only 640/200 (4 colors), 320/200 (16 colors). That works for games and some basic word processing, but most of your serious applications will need the black and white monitor.

My ST died. So I'm looking for a 1040STe. It would be nice if it had 4 Megs. I don't know about this but I would appreciate a reply. I use a Flat-Bed Scanner with a Navarone Cartridge Interface. I'd like to know if the Interface will work with a 1040STe? I'd also like to know if the 1040STe will support the HP Laser Jet 5L that is supposed to do 600dpi with PageStream? I'd like to know if the 1040STe and/or STe TOS is incompatible with older software, like games. I'd like to find it local to Porland, Oregon. Please direct all replies in E-Mail to: bensmith@teleport.com if you want me to read it.

1624. Programming by kids on the ST-Turtle Graphics

Newsgroup: comp.sys.atari.st
Date: 1997-04-28 00:00:00 UTC
From: Alyre Chiasson <chiassa@umoncton.ca>
Message-ID: <33655340.35D9@umoncton.ca>
Source record: 123102

Hi,

My daughter now has the sole rights to my 1040ST. I am still holding on to my MegaSte. She is 8 years old and has expressed an interest in programming. I believe I still have a copy of Turtle Graphics that originally came with my 1040ST as well as ST Basic. Would Turtle Graphics still be the best way to go? I also have GFA and MegaMax C but I think that would be way too advanced, our local schools are not that far advanced in conceptual thinking. Any ideas on the best way to teach programming concepts to kids on the ST and have them see some results so they do not lose interest.

ThankS

Alyre Chiasson

Hi Linda,

I have mostly the same set up as you,same CD Rom as well,and all is working well. I think your problem could be the version of Extendos you're using. I'm using ver 2.4A.(the latest I believe) This version was purported to work via Majic5, and for me at least, it does.

I wish I could tell you where to D/L it, but I bought this version from Chris at Computer Direct. Roger of Anodyne can he though.

Hope this helps,

Jim Coile

1631. CABv2.0a/CAB.OVLv1.25/REWARD!!!

Newsgroup: comp.sys.atari.st
Date: 1997-04-28 00:00:00 UTC
From: csilver@kendaco.telebyte.Spam.This.com
Message-ID: <5k17dq$6kf@news.telebyte.com>
Source record: 123195

Hi Kemosabes,

CAB.OVL v1.25 (48520 bytes) Which of these is optimized for 030?
CAB.OVL v1.25 (48572 bytes)

Well, I've tried the new OVL's with CAB v2.0a. I'm not sure which one is optimized for the Falcon, but both work well and are quick. However, I'm still having the 69 byte error problem with some Web sites ;) Basically, CAB loads 69 byte error messages in the wwwcache instead of displaying the proper gif's. I've posted this message over the past several months, but with NO reply as to the "Real Fix". Therefore, I will offer a REWARD.

The first person who can display ALL these Web pages correctly using CAB/STiK/OVL and tell me how will get a free dinner on me at RUTH'S CHRIS STEAKHOUSE, in Seattle. The best Steak's in the Pacific NW, if not one of the best in the World! If you ever visit the NW, the dinner's on me...

The pages are:

http://www.qvc.com/
http://slate.com/
http://www.switchboard.com/
http://www.pcquote.com/ (bombs with the new setup, otherwise same)
http://www.gaelic.com/ (almost, but no cigar...)

There isn't anything here that has special HTML for a particular browser. The problem seems to be in the CAB.OVL or possibly STiK.

I'm using a Falcon/TOS4.04/CAB2.0a/STiK1.12/CAB.OVL1.25
Well? Patches or kludges OK.

Regards,
Charles

P.S. Dinner for two if you have a guest.

If one has legally purchased the software there shouldn't be a problem
with hacking with the software so that it bypasses the dongle on bootup.
Tahat;s what makes Notator incompatible with 030 processors

Hello,

I have an officiel version of GFA 3.5 and i have a prg to adapt for a
falcon but GFA 3.5 interpreter refuse Flacon resolution ...
I read in a FAQ than the solution is GFA 3.6 for TT :
* Is it now a public domain ? and can you provide it to me (attached
file in MIME format)
* Is it still commercial and where can i get it and how ?

Thank you very much.

Pierre-Yves.

So this manual is wrong. Probably the ICD driver doesn't support boot
partitions > 32 MByte, other drivers (even AHDI) do.

I see. With an ICD compatible host adapter (e.g ICD LINK, H&S Link,
LINK96/97) and a driver supporting this adapter (ICD, CBHD, HDDRIVER)
there is no upper limit for the drive size. Basically you can connect
any SCSI drive to the ST/STE with these adapters. Note, however, that
some drives require the ST/STE to have a SCSI ID of its own and these
drives only work with the LINK96/97 adapters.
For the TT and Falcon there is also no upper limit, of course.

Yep, as said before, the board is no longer available :-(Although I've been about to sell my own card. The only problems are that it won't fit inside a normal case and second I haven't got it working with other revisions of Falcon than type B. The bright sides are that it has a 50MHz 030, which is, unfortunately, clocked at 32MHz.

Take Care, Miika

Today I encountered a problem with my GEMulator: It says 'GEMulator not running'. The TOS ROM card is no longer recognised. I wiggled it a bit and took it out then inserted it again (oo-er!) but still no show. Any suggestions? The weird thing is that it worked a couple of days ago and, well, I didn't do anything special to my computer at all.
Weird.

Anyone who went to this weekends UK ATARI shows in Birmingham and London?
Will you write a Review or Report or Article for publication on a web page and in ST+17 ?,

From Tomorow There will be a special ATARI Show section on the ST+ Diskmagazine web page for all to view, the main feature will be a 30k real time article written by the visitors to the ST+ Diskmagazine stall,
At least one review so far?, So anyone else want to send anything about the show, from one paragraph to one line, and especialy photos, scanned or actual photos,

As soon as our pictures are ready, they will be on the page,

The real time article and all text submitted re: the shows, will be the main content of ST+ Issue 17 released end of May,

So heres your chance, get writing :)

diskzine@earthling.net

>Heck Tony, you could probably make one with STOS :)
>
>I imagine it would load afile named cyber.seq automatically and use

O ye of little faith :)

I already made one, I was told by someone who uses CYBER that the
auto launcher was a bit eerm not good?
He wanted something that would just run one and maybe a bit of music,

So I did one that simply reads an "ini" file from disk, telling it
what seq to load, to loop or not to loop:), and any music he may want
as well,

So why ask ?

Well the little project has room for decvelopment, ie: run more than
one seq?, or run other odd files, like photochrome 256 colour pics,
FLM VID etc, (the videos grabbed with vidi st or videomaster) and
other stuff, so you just configure one file to display on auto boot,
or a series of files or whatever ?

But absoloutly no point expanding the little prg I made, if something
else already exists...dont want to re invent the wheel do we?

Cheers !ynoT (ATARI Programmer)

No, it isn't public domain. Just like much of the great ST programs, GFA is
still commercial, but not supported. To copy it would be piracy and is
illegal.

Has anyone had luck using the new cab.ovl 1.25 with GlueSTiK? I have
tried both the standard version and the 030 version with my TT, and
both give me #600 errors. I am using the latest CAB 2.0 demo and the
latest GlueSTiK. Everything works fine with earlier versions of cab.ovl.

Hi Albert,

GlueSTiK currently emulates STiK 1.11 afaik, so it *should* work,
given that CAB.OVL 1.25 was tested on STiK 1.12, 1.13 and 2.00b.
However, it *is* possible that GlueSTiK doesn't even match 1.12.
Better e-mail the author, just to make sure. ;-)

It can read PC disk. No problem.

> 2) Are there any utility disks that should have been supplied with it?

I have no idea, but I guess so. If you are completely new to Atari
computers you better try to get hold of a FAQ or something for
adavice. There are alot of usefull programs most which can be
downloaded by FTP.

> 3) As I only intend to use it for its MIDI card, what software is
> available to act as sequencer and patch librarian? A UK dealer would be
> nice.

I don't know about and UK dealers (maybe System Solutions?) but for
MIDI programs you have _alot_ of good programs to choose from like
Cubase, Notator Logic etc. There is a very good patch librarian but I
can't remember its name. I think it's from SoundPool...

BTW. For using most music software you need to access ST-High
resolution. For that you need a Atari mono monitor or a SVGA monitor
would do the job as well.

Aha, this site was realy nice and there is a link to the Vapourware site as well. Hmmm... it looks like they had 2 different cases as they are not the same. This one is more slim than the one at the Vapourware page. Cool. I still want to throw something hard at the Tramiels. If you read the text at the above page it looks like Jack Tramiel had other thoughts than the german boss who wanted to push Atari into the more professional market which I think would have been the correct way to go and not the Jaguar way. :-\

Ahhh... 32-bit bus... 68040.... three expansion slots.... :-\

So what happened to this german guy? Maybe it's time for him to show who had right and buy the rights of the Falcon and launch it as it should have been from the start? :-))

I can always dream can't I? :-)

>both give me #600 errors. I am using the latest CAB 2.0 demo and the
>latest GlueSTiK. Everything works fine with earlier versions of cab.ovl.

I *think* that means the .ovl is calling STiK functions that don't exist
in the version of STiK that GluesSTiK currently emulates. If you have
version 0.02b4 of GlueSTiK, you can help me find out: Set the variable
GLUESTIK_TRACE in your DEFAULT.CFG and reboot. This will activate the
trace log \STIK_CFG\GLUESTIK.LOG on your boot drive. Walk through the
steps that get you to the 600 error, and then check the trace log for
obvious errors --- or just send it to me and I'll try and interpret it.
(Oh, and don't forget to turn the trace log back off for regular use.)

1655. For sale: Atari 520ST

Newsgroup: comp.sys.atari.st
Date: 1997-04-28 00:00:00 UTC
From: cashman@satori.ucs.indiana.edu
Message-ID: <5k2t9r$ee3$1@dismay.ucs.indiana.edu>
Source record: 123219

Greetings,

(FOR SALE)

I have an Atari 520ST that has been sitting in a closet for several years now. The system unit and monitor are in good working condition. The system came with an external SS 3.5" drive that has a bad stepping motor. This system was purchased in 1986. I've been the only owner.

I have decided to part with this system since I have not used it for several years now. I will take the best offer. If you are not local to the Bloomington, IN area (ie, can't come pick it up) then you will have to pay for shipping as well. All components are in their original boxes.

I can be reached via e-mail at cashman@satori.ucs.indiana.edu (or just reply to this message). Please do not respond via this newsgroup. I do not follow this newsgroup. I'm looking to sell this quickly, so please respond quickly.

Thanks!

- Geoff Cashman

It won't work. The ZIP drive needs a SCSI link with parity. IIRC the Link I does not have parity
so I don't think it will work. You will have to check into getting the Link II or Link 96 which both
are parity enabled host adapters.

You might find most answers in the Quick FAQ at the following address:

http://www.geocities.com/MotorCity/2090/faq10.htm

>1) Can it read PC disks? (probably not but it would be useful)
>

Yes, but they have to be 720K double density format. Check out the FAQ.

>2) Are there any utility disks that should have been supplied with it?
>

Just the language disk, but it's not of much use anyway... You will probably need
the control panel accessory that was on it. You can find a newer version called
xcontrol on most atari FTP sites. Check out the FAQ.

>3) As I only intend to use it for its MIDI card, what software is
>available to act as sequencer and patch librarian? A UK dealer would be
>nice.

Plenty, freeware, shareware, commercial, stuff. In the UK, your best bet is to see
Systems Solutions for commercial stuff. They have a web site too (you'll find it on most
Atari web sites).

>use a colour Monitor instead of the SM 124.
>What will happen with the software that only runs with high solution
>(640 x 400) and black and white?
>

Programs that are written to run in both colour and monochrome will be ok. Monochrome
-only software will not work. The best solution is to have both monitors
(or a multisync that is able to handle both resolutions, but there are not many).

If you really need to run Hi res stuff on a colour monitor, you can always try out Sebra
(on most FTP sites), that simulates a sort of interlaced mode which slows down the computer
and is quite painful after 2 hours of work...

>Can I use this software further on f.e. CUBASE SCORE?
>

I think Cubase is monochrome only, but I'm not sure...

>Can anyone recomend any software for E-mail and vere I can find it! Will it
>work with my ST and it's prestanda. What more software do I need do get
>access to internet?
>
It's depend on your Internet provider configuration. If he provides a SLIP or
CSLIP serial link, you just have to use stik.

In case of PPP serial link, you have to use mintnet (TAF distribution
or PPPKIT) to access to the internet.

For the mail, the news and the ftp, there is newsie (+gluestik if not using stik), for
the web, there is cab.

Anyway, using an hard disk is highly recommended (even a little one of 80-100
mo).

Good luck

1660. New CAB.OVL

Newsgroup: comp.sys.atari.st
Date: 1997-04-29 00:00:00 UTC
From: nroughley@unix.dsoe.com
Message-ID: <33653de6.0@scipio.cyberstore.ca>
Source record: 123103

I tried out CAB.OVL v1.25 and it still has problems with some sites. Specifically, all graphics come in as 69-byte HTTP error messages in HTML format. The error number is 406 (No acceptable objects were found). CAB thinks the error messages are GIFs, though (that's the way they're named in the cache). I've experienced this with every CAB.OVL in the past. This problem only occurs with certain sites (roughly 1 out of 30). Error number 406 has something to do with HTTP's Accept-Encoding, which is optional in the protocol.

Does anyone else experience this problem running STiK under standard TOS? Could it be STiK's fault and not the OVL's? I do know of one other person (Charles Silver) who experiences this. But is it a common thing for other users?

1661. question about CPX modules

Newsgroup: comp.sys.atari.st
Date: 1997-04-29 00:00:00 UTC
From: ws96ag@badger.ac.brocku.ca
Message-ID: <5k3f3l$14h@butler.ac.BrockU.CA>
Source record: 123104

Hello. I have a 1040STe with TOS 1.6. I was wondering if there is any way I could use CPX XCONTROL panel files. I've heard the new control panel is for TOS 2.06 and up.
Actually I have the TOS ROM dump file for 2.06 (It works fine with PacifST or Gemul8r 3.6). I also have an old TOS.IMG for TOS 1.0 file. I have a program called QTOS (1990 from Branch always software - 358 bytes). It runs my old 1.0 TOS.IMG file but it won't run the TOS.IMG (ROM dump file). The TOS 2.06 file actually came off the net (along with ROM dumps for TOS 1.2, 1.4, 1.62.0 QTOS won't run any of these. It must only run disk version files, like those that used to be sold with the first 520ST's, I guess.
Does anyone know if there is anyway to run those TOS files I have on my ST or how I might run CPX modules?

Rick.

There was a quite successful DTP program which used GEM and GEM is in fact still in use on some PCs. Coros is a Turbine Monitoring System developed by Siemens Nixdorf and this program runs under GEM on PCs. The underlying operating system is FlexOs. Coros still gets sold all over the world. So you might see GEM applications if you visit the control station of a power plant.

Um funny thing is I didn't think you needed software with this emulator
if its the one I think it is. You just put it in your machine and run the
cords to the back make a whole and out pops a little switch you can use to
switch between the PC emulator and the ST TOS - right?

```
Atari stuff for sale as follows :-

If the prices appear with a funny character in front of them, they
should be UK pounds :)

HARDWARE
========
```

Atari 1040 STe (upgraded to 4MB) £75 - see @@@ below
(includes Quickshot joystick,
Atari mouse, cables - TV and power)

Atari 520 STfm (upgraded to 2.5MB) £15
(BROKEN - wont boot correctly,
but may be suitable for repair or
for breaking for spares)

Gasteiner 42MB hard drive (DMA) £45 - see *** below
(includes leads + utility software)

Philips CM8833 MkII colour monitor £60
(suitable for ST low and medium
includes ST <-> monitor lead)

```
All of the above come with manuals, except broken STfm.
All in mint condition.

For the above kit, email me (bottom of list) to discuss P&P / delivery.

For the stuff below, P&P (1st class recorded delivery) included, where
possible. If you want registered, we can discuss that.

SOFTWARE / BOOKS
================

Games
=====
```

F-19 Stealth Fighter £8

Midwinter (strategic 3D game) £7

Maniac Mansion (funny / scary £7
graphical adventure)

Future Wars (graphical adventure) £7

Interphase (excellent 3D graphics) £5

Germ Crazy (halt the invading bugs!) £7

Time (graphical adventure) £7

F-16 Combat Pilot £5

Starglider 2 £5

Substation (Doom-like game) £10
STe only (maybe Falcon too ?)

Obsession (v. good pinball game - best £10
graphics I've ever seen on my STe)
STe only (maybe Falcon too?)

Programming
===========

Personal Pascal v2.05 £12
Actually an STF cover disk, but
I ordered the manual from HiSoft
for £20 and that's what's for sale
Cover disk included

Lattice C v5.52 £30
Excellent for learning / using C
Full development environment (incs
WERCS and many other tools)
More manuals than you can carry (almost) :)

HiSoft 'Your FirST Basic' Manual/disk £3
Well worn but useful :)

The Atari Compendium book £20
Errata included in the book in my
own fair hand. Everything you
wanted to know about Atari 'C'
/ programming

Misc
====

Timeworks V2 - ST DTP £15
boxed with manuals

Chemkit (chemical structures drawing £10
package - hi res or hi res
emulator required - I'll include a
PD one that I used. Manual included)

PFM Plus - personal finance manager £7
excellent software - incs manual

1st Word Plus (word processing package)£10
good / basic WP with manual

3D-Calc (3 dimensional spreadsheet) £7
boxed with manual

*** Magic v2 £15
Fully pre-emptive multitasking OS
manual included

*** Ease v3.01 £15
Excellent new desktop for your ST -
works a TREAT with Magic :)
manual included

*** I'll bundle these with the hard drive for £20

@@@ I'll include my entire collection of old magazine cover disks
with the STe - I'm not going to count them but there are a LOT.
Covers STF (lots), ST Review (dozen or so), a couple from a
couple of other mags. Also the first 3 Atari Computing mags
with cover disks. You can continue this one yourself :)

The entire set of Atari World (issues 1 -> 11) inc cover disks. £25
I won't split these.

You should check this again. With TOS 4.0 you can have partitions up to
1 GByte, even with AHDI. I guess it's not the driver that causes your
problems but something else.

> ALso I would like to read PC formated Zip Drives. Is it possible ?

This is possible if you're running HDDRIVER in combination with MagiC 5
or Big-DOS. With CBHD most DOS compatible partition types are also
supported. But in any case if your partitions are > 32 MByte you need
either Big-DOS (acp5.chemie.uni-kl.de/pub/atari) or MagiC 5. Note that
for the Falcon BIGDOS06 is a better choice than BIGDOS08.

Hey Rick,

have you just tried simply booting with XControl on your boot disk ? Surprise: It works with all TOS versions. XControl was given away with TOS 2.06, but it works on all versions.

No need to mess around with those illegal TOS ROM images. I have yet to see someone who has actually managed to get a TOS ROM image to load from disk anyway.

Nick

Hi Miika,

If your not running NVDI with the M/S you will have video problems
and fast ram problems. Mine runs flawlessly with NVDI. I did have to
replace the hex inverter on the card (lower left corner) with an
ALS type to get things working ok.

Midi _with_ DMA sound? In sync? I think only Cubase & Logic can do that.
Or am I missing something again? :-)

I don't think so. The supercharger was an external box with it's own processor and ram that you plugged into the serial (or parallel, not sure) port. I think you were able to have the PC and ST running at the same time or you could use the Supercharger's ram as a ramdisk.

Anyway I suppose you need some software for it and probably also a copy of MSDOS (two drives too I suppose). Good luck...

Pierre, version 3.6 was not recommended by GFA after users found that the
memory management was flawed. I have used 3.5E on a FALCON with no
problems at least for running programs in Falcon modes other than true
color. I never tried programming in Falcon modes. I decided not to buy a
Falcon so can no longer test it.

Nope it's not them. Titan does only distribute it.

If I knew how to contact them I would have done so a long time
ago. :-(

I want some info on the AB040 board but it looks impossible to get
hold of any info at all. The Gero guy looks to be realy hard to
contact. I think it's he who designed the Eagle as well and it should
not suprise me if he is the guy behind this new clone, Milan 2000,
either.

The only way to get int touch with Gero looks to be trough a guy
called Peter Konrady but I don't know how to get in contact with him
either. :-\

It looks like all interesting people hasn't got an email account!
2B, Gero etc. :-((((

I guess you mean it is played at the wrong frequency? or is it a
sign/unsigned type problem (no, I dont really remember records! :)

>However, when I reboot the start up sounds just fine!?

Do you have anything else which uses DMA sound installed on your system?
If so, then it is quite possible that the two programs are clashing, and
so the frequency / bits-per-sample etc. If this is the case, rebooting
would re-initialise the sound-system which would cause SAM to play
correctly.

Oh, one more thing, I guess... what verson of SAM are you using? (I am
not aware of any difference with regard to this, but its worth checking...)

1683. Wanted: TOS Roms

Newsgroup: comp.sys.atari.st
Date: 1997-04-29 00:00:00 UTC
From: hirsch@ibm.net
Message-ID: <5k4lbt$21ni$1@news-s01.ca.us.ibm.net>
Source record: 123126

All,

It would be humorous if it weren't so frustrating! The Atari ST FAQ spends a lot of time pontificating about the evils of system-software piracy, then provides absolutely ZERO information about where one can legally obtain TOS.

Having just spent two days on the Web searching for:

(1) An older TOS version that can boot my 1040ST from diskette

and/or

(2) Latest-and-greatest TOS (2.06?) ROMS for internal upgrade (yes, I'm handy with circuit-level electronics and have the instructions..)

I'm about ready to throw in the towel..

Can someone please provide me with a US (or, possibly, Canadian) source which can legally SELL me the required items?

If it is not possible to obtain these legally, I'd appreciate E-Mail contact regarding other avenues. I will only pirate them if I cannot purchase them, so no flames, please!

Thanks in advance for any pointers.

Steve

They can't do what I want. Playing sounds at different pitch like a
real sampleplayer and define your own instruments. I think CAF can
trigger sounds but it's not the same.

> ->> (I've got some money for a good one :-)
> ->
> ->Mee too, if it supports the Falcon with audio.

;-)

No I want a program like a trackerplayer, but for midi songs with
sounds. Something like a GM sound module inside the computer.

Have you tried contacting Computer Direct in Canada?

http://www.compdirect.com/

Their online catalog is not very up to date, but they do specifiy that they
sell "Memory Upgrades and System Enhancements" as well as a lot of other stuff
for Atari. They probably have a couple of TOS 2.06 ROMs to sell you.

By the way, if you have an older ST with a 6 chip ROM the fitting is probably
quite tricky, but you know that already 'cause you've read the FAQ ;-)
The best thig is to get a little Bi-Tos board that allows you to switch from
the old TOS to the new one easily.

1691. MIDI Keyboard

Newsgroup: comp.sys.atari.st
Date: 1997-04-29 00:00:00 UTC
From: !ynoT
Message-ID: <3370c64b.6994965@news.airtime.co.uk>
Source record: 123134

Can anyone tell me what this is sat in fron of me,

What looks like a full size MIDI keyboard,
One built in lead,with a black box part way down, protrusing drom
that a lead for joystick port, NO switches on box or keyboard,
Lead is flat, and fits in PRINTER port only, and the joystick port
for power....yes printer, and the little manual says use printer port
:)

On Label : MM5000 5 Octave Keyboard
Eidersoft

One disk with a MM5000 Driver, about 17k

One small leaflet with instructions for ATARI ST or Amiga 500-2000

ATARI..Bsically says the driver stays in memory, in background,
recignises signal and instantly converts and places into midi port,
thus whatever software you use, knows no difference?
No mention of what software or date of keyboard etc,

I have no idea about MIDI but if can get working then kids might use?

I got sweet16, Dont ask? no idea why, just sounded right? :),
Plugged everything in <gulp> ran MM5000 driver, ran sweet 16, on
pressing a keyboard key, I can see bottom right of screen a meter rise
and fall to the keypress, but no sound, there are too many options in
the software for someone like me who has absoloutly no idea?

So thats about all the info I have...ho STe 4meg tos 1.62 no mono!

Question?....What next ?

Cheers !ynoT (ATARI Programmer)

System disks are available free from the apple www page (www.apple.com?)
or
ftp site. sounds like you have a partial system disk. You get a happy
Mac,
but then it can't continue. I hope you have a hard drive! :^)
Once you boot from floppy you can install the system on a partition.
I have System 6.04, 6.07, and 6.08 installed on different partitions so
that I can boot to a different system depending on what I want to do.
6.04 for speed, 6.08 for HyperCard,...
good luck.bonnechance

: anything special to my computer at all.
: Weird.

I don't have the ROM card so it may be a different problem, but I was in a
bit of a frenzy last week with the 'GEMulator not running' and system
hanging problem until I remembered that it also does that if you have the
printer port shared and the printer is off.

I have a Mega STe mother-board, i have questions please
answer me, because i want take advantage of the board..

what type of HDD's for Mega STe can i use? internal,
external,removable-media..
what type.? : need special connector? (prices)
Exist IDE adapter for Mega STe?

Can I connect a ET4000 with Crazy Dot to Mega STe??
how cost Crazy Dot ?
how cost ET4000 ?

what monitor i need if i can connect Crazy Dot & ET4000 to Mega STe??
what monitor? with some special connector?
Is Nova Graphics card a good choice?

exist differents types of cases for Mega STe..??
what type desktop? tower? (prices) ..what case i need if a want connect
ET4000 & Crazy Dot to Mega STe Motherboard??

what languages & kits exists for Mega STe to programming??(prices)
(like C++,C,java,perl,databases..)

I know that megaste motherboard came with TOS 2.05..then the question
is ...which are the differences between it and TOS 2.6.???

I hear that megaste have keyboard input..... what type of keyboard
....an "atari-keyboard" or "PC-keyboard"?? (what is the cost of each)

Can I up the speed of Mste ??? (16Mhz to 32Mhz)

Thanks very much to anyone that answer my questions. Good Bye Friend./

GEMulator suddenly didn't recognise its TOS board anymore, so I installed Pacifist. And I've been having a shitload of problems with it. Literally every program crashes or gives some sort of error. Even fuckin' "1st Word Plus" gives a "can't find 1stword.str" error. And my source code of UVK suddenly gives a "sprite string length wrong" error when in fact there is not a single sprite to be seen in the damn thing.
Who gets me on the right track here, please?

Yes, I tried it out.
With no luck I'm afraid.

> This version has a number of display bugs fixed, and permits
>reading of local files including the display of the VT102 Graphics test
>files included.

THAT part worked fine, very nice.

>P.S. If you try it, and find any bugs, let me know.
>If you like it, let me know. If you don't, let me know. Feedback helps.

First of all, I use GlueSTiK. (a problem?)

When connecting to my host, I get modem activity, but NO characters
on screen. (Same as previous versions.)
Normally, with other clients, I get a prompt for a username and a password.
-What does the 'connect' part actually do?

Also, NVDI reports 'invalid handle' at startup of the program.

I run MiNTnet 1.01 with a PPP connection.
My machine is a Mega STE.
I use NVDI 3.0
Resolution is 640x400

The whole thing looks very nice, although I can't use it.

Thanks for your efforts.

>
> Cheers !ynoT (ATARI Programmer)

Certainly not. Atari doesn't produce any MIDI sound - it just works as a midi sequencer (it is a bit like a piano roll without the piano). You have to connect at least some sound module (e.g. Sound Canvas) - if you're lucky, you have the MIDI through port on that strange thing. If not then from what you wrote I understand you have the MIDI port on your ST free, as the keyboard takes the printer port (which is quite odd, I strongly suspect the thing is an extraterrestial pretending to be a MIDI keyboard and just wanting to suck your computer's soul through the printer port!)

Maciek

As Ben Hall pointed out, Christof Schardt of Columbus Soft supports GFA, selling GFA 36TT, Erog!pro, Ergo!tool & the visual basic of Ataridom: Face Value (shameless plug, I wrote it...! ;-) Christof can be reached at cs@socrates.st.bauing.th-darmstadt.de - I am sure your being in France will not be a problem...

> and an address that does not seem to work:
> http://www.mediarom.no/mediarom/vegard/gfa.html

A bit embarrasing, this link has been dead for quite some time now. The reason is that I have changed jobs & then a merger happened - so I have had to move my pages 3 times the last 4 months. The Face Value page is now located at:

http://home.sn.no/~veg/faceval.html

And the general GFA page is at:

http://home.sn.no/~veg/gfa.html

From there you can DL many GFA tools - like A La Card, Flydials, GFA Patch & more. If you miss something on this page, let me know & I'll include it if I can...

For those of you already familiar with Face Value, you will be pleased to know that v.2 is currently in its 5th beta version & due this spring/early summer. Details will be posted here at release time (& at the FV home page, of course).

```
: If one has legally purchased the software there shouldn't be a problem
: with hacking with the software so that it bypasses the dongle on bootup.
: Tahat;s what makes Notator incompatible with 030 processors
```

Actually, I don't know that this is the case. I mentioned this concern to one of the developers of Notator, and was told that there were various "internal" reasons for the incompatibility with 030 processors. I personally would love to be able to use Notator again, as my ST is in limbo, and Logic is a bit too clunky and slow for my tastes.

I wish that some Falcon compatible version of Notator existed, Dongle or not. I own Logic and Notator, it's only fair that I should be able to use them.

: > problem was they had their own GEM word processor, spreadsheet, ect.

===...As I understand it, when the PC had a 640K operation hole to work with, the GEM system took up about 360K of it, leaving little room to operate in RAM on a AT, XT or 286 machine. Because GEM programs had to be written in assembly to provide a small profile in RAM, programmers were not too enthusiastic. With this limitation and the then current PC configuration, GEM could not compete with DOS, which as you know, was much smaller and allowed programs to be written in LESS CONCISE programming languages, providing a larger platform of programmers. Besides, the CPM roots of DOS made seque programmers from the Osborne CPM system gain more credence in the DOS market. Early difficulties in creating GEM resource files also aided in the difficulty perceived by GEM. There is still a PC GEM available that can be loaded from DOS. There are some efficient GEM program also still available in the PC market.

===...Hope that helps fill you in on GEM for the PC.

I have the following games for sale:
Quantities vary from 20 to 400.

Prices are for 1 to 9 $2.00ea. + Shipping & Handling
10 to 20 1.70ea. + S&H
21 to 50 1.50ea. + S&H
51 to 100 1.25ea. + S&H

For Intellivision:

Space Spartan
Tron Deadly Disks
Star Strike
Beauty & the Beast
Astrosmash
Stampede
Space Armada
Dragonfire
Sharp Shot
Space Hawk

For Coleco:

Fraction Fever
Defender
Tournament Tennis (No box or label, new never wrapped)

Centipede (price is $3.00ea. for this game - quantities limited)

Controllers for Coleco original style -
$2.00ea., 5 or more $1.00ea. No boxes, cables are stretched out.

For Atari 2600: (No Quantities)

Asteriods
Astroblast
Space Attack

For Atari 5200:

Pitfall
River Raid

The next 2 games say 2600 on the boxes but are actually for 5200:
Space Shuttle
Zone Ranger (instructions are for the Atari 400)

For Atari 7800: (No Quantities)

Asteriods (Some have no shrink wrap)
Xevious
Robotron: 2084

Hat Trick (price is $3.00 ea.)

All 7800 games have minor dents in boxes from shrink wrap.

For LYNX:

These games are priced at:
1 to 9 $5.00ea. + S&H
10 to 49 $4.00ea. + S&H
50 to 149 $3.00ea. + S&H
150 or more $2.00ea. + S&H

Double Dragon
Qix

New original LYNX power supplies $10.00ea. + S&H
New Rechargeable Battery Pack & Power Supply By GP
$15.00ea. + S&H
This works on Lynx or Turbo Express

* Special Price *

For Intellivision:
Space Spartan in quantities over 100 are $.50ea + S&H

Shipping & Handling Prices:

1 = $ 2.00
2-3 = 4.00
4-6 = 5.00
7-9 = 6.00
10-13 = 7.00
14-18 = 8.00
19-24 = 10.00
25-32 = 11.00
33-42 = 13.00
43-55 = 15.00

r>
r> Then you just answered our question in terms of partition size, not the
r> full hard drive size. I'll have to dig out my ICD manual and see what
r> else it says about partition size limits.

What HDDriver and CBHD allow is more recent than what's available from ICD. I think ICD's own limit is 512Mb per partition with TOS 1.4 and above and 256Mb below. With MagiC, any machine can have up to 1Gb partitions, even on drive C.

The old STs were shipped with ST Basic which was fairly useless indeed.
However in 1988, ST Basic was replaced by Omikron.Basic which was
quite useful actually.

Lukas.

There's a program available for TTM195 users that allows almost any TOS program to run on it. I did try the program and it worked perfectly. However, I can't remember the name of it. It's German (of course) and has a graphical reminder to send in the shareware fee floating across the screen. I've since changed my TT's video hardware so I don't run the TTM195 anymore. I'll see if my old floppy archives have a copy of it.

t> mains cables. Nothing else. I have a few questions.
t>
t> 1) Can it read PC disks? (probably not but it would be useful)

Yes, as long as they are 720Kb formatted.

t> 2) Are there any utility disks that should have been supplied with
t> it?

The stuff on the supplied discs was rubbish. You haven't missed anything. The
operating system in in ROM so you don't need systems discs. If you find
yourself a local BBS or exploit FTP on the net you will find all the free
utility software you will need.

> Who gets me on the right track here, please?

1) Watch your language. No need to use foul words to express your problems.

2) Pacifist is very stable with all the programs I've tested so far, except a few bugs with the hard drive emulation.

Be sure:

a) You are using the latest version (0.43) that has a few more drive bug fixes

b) You are using a 'stable' TOS version. I suggest v1.00,v1.02,v1.04

c) Avoid running programs from 'real' floppies. This is reportedly bugged too. Use disk images instead.

d) Some programs don't like running from the hard disk emulation. Try making a 4Mb floppy image (someone indicated Pacifist has problems with 8Mb disk images), and run your programs there instead.

Frederic is doing a great job on Pacifist with a new release nearly every two weeks. And besides that, it's free (which is cheaper that Gemulator!). It would probably be more constructive of you to report any bugs directly to fred instead of flaming the program in here.

There is actually an old program called EPSS which works on all
Ataris with DMA sound. You can get 8 channels of polyfonic sound on a
STe and Falcon and 16 on a TT. The soundquality isn't very good but it
works. It can actually play midi songs as well and it uses user
defined instruments and has velocity control and even filter! :-)

The problem for me is that it hasn't got very good sound quality (but
not worse then trackers for the STe) and doesn't take advantage of the
Falcon at all (better sound and DSP) so it's not a option for me. I
have tried to talk them into making a dedicated Falcon version but
they don't want to. :-\

If someone is interrested though they might let you do it for
them. :-)

Another cool thing with EPSS is that it works together with Cubase
turning your computer into a complete sound workstation!

It's made by the same company who does Zero-X.

Check out my Quick FAQ for using an ST without a mouse or replacing it:

http://www.geocities.com/MotorCity/2090/faq10.htm

You can either get an Atari compatible mouse or use a PC serial mouse on the
ST's serial port with the adequate driver.

Further to the point of compatibility with the Link and Zip drives...

You DEFINITELY need the LINK II...Both for parity and for the fact that the earlier version has major problems with removable media. The newer versions allow media check signals to pass from computer to device and back.

My $.02

Erm, as far as I know TOS can't boot from BGM-partitions, only from those
which have "GEM" as partition type. So, booting the harddisk driver from a
partition > 16(32) megs is not possible. Is that wrong?

Ciao

That's not the point. If you look at the error output Tony has posted,
you'll see that his server wasn't able to look up the hostname, i.e. his
name server couldn't get the IP address for www.axionet.com.

I've tried nslookup www.axionet.com, and it tells me:

*** rs2.hrz.th-darmstadt.de can't find www.axionet.com: Server failed

So, if any of you who were able to reach that host could use nslookup and
post the IP address here, maybe more people would be able to see the pages.

Ciao

Well many thanks to all who replied to my previous postings, lots of software has been sold though there are still a few packages and hardware items remaining. Rather than put prices on them, if there is anything that interests you then make me a sensible offer and ... it could be yours!

Software (all registered with manuals where appropriate):

Fontkit plus 3
Script wordprocessor (MacWrite clone - uses signum fonts)
Textstyle (produces bitmaps from vector fonts!)
Vector X-change (converting between vector formats)
X-boot (ultimate bootup prog)
Addrese (address gem prog - very nice) - registered
2-in-1 (manages all compression utils in a shell)
Gemspool (printer spooler) - registered
NVDI3 100-font pack (TTF high quality typefaces on 5 disks)
Everest editor (registered)
Gemview (registered)

CD's
Bingo (german PD/shareware etc)
Gemini archive of michigan
Suzy B's double CD treasure archives!

Hardware etc
Vidi 12 ST colour digitiser for ataris
SCSI external CD rom driver (apple mac - needs a scsi connection)
Hama trilock digital genlock unit (suitable for any computer inc. pc's etc.), new
Titan graffiti STE genlock unit

Regards,
Simon

I think I found it at ftp.uni-kl.de some time ago. I'm not sure in
which directory though. Could be "comercial_demo" or incomming or
something similar. It was not in the music dir anyway.

Ofcourse. It's not bad. About the same as trackers. If someone
remember the demo crew Unit17, they used the same replay routs in
their demos if I'm not wrong and they sounded not bad at all.

> >works. It can actually play midi songs as well and it uses user

Look at the above ftp archive.

> >It's made by the same company who does Zero-X.
>
> ooer will try there page?....thx

I don't think they have got it for download. It's a comercial product
but there is a demo available. I thik you still can buy it, but as
long as there is no true Falcon support I wont buy it and I wont buy
it just to make them do a Falcon version becuase they aint! If I knew
that they would I would buy it straight away.

I talked to Tony via e-mail and his server did eventually (the next day)
resolve the host. Why some people experienced DNS failures is beyond me
(perhaps Axionet's HTTP server was down for maintenance at that time).
As for the IP address, here it is:

Hostname to resolve: www.axionet.com
Resolving...Got it : 207.102.157.201

All the pages were done on my TOS-box (HTML, graphics, scanning, OCR,
even the the uploads to the server). The pages are carefully optimized
for both 640x480 and 800x600. I was also careful to keep the pages
compatible with CAB 1.5 even though I'm using 2.0 now (lots of new tags
and attributes simply weren't used because of my extensive use of tables
for formatting). CAB, qed, and OLGA creates a wonderful authoring
environment. Calamus and Cranach came in handy for the graphics (click
the logo at the bottom-right when you get there).

Oops. My using the word "fucking" was in no way intended to be either foul or
flaming. I know better than that, I think. I used "fucking" because A) I guess
I listen to too much heavy metal :-) and B) To emphasise the fact that 1st Word
Plus works on every single oddball Atari configuration but that I seem to have
a problem getting it to work on what is reportedly the best ST emulator in the
business....PacifiST!
No need to go all paternal on me, Nicholas.

> few bugs with the hard drive emulation.
Thanks for pointing this out. I know PacifiST is damn good (damn is not foul
language, is it?) but I have these serious problems that I could really do
without. The main reason why I'd use emulation is to be able to use my old text
files (with 1st Word Plus) and old database files (with Superbase). But I also
want to continue updating my Ultimate Virus Killer, but now I get these stupid
error messages (SPRITE STRING TOO LONG) when I don't even use sprites! This
worked fine on GEMulator, you see.
>
> Be sure:

1st Word Plus too? GfA basic too? This is a 'solution' that I really can't do
anything with.

Yes, yes, you're quite right. Point taken, apology offered. Now quit
paternising me. I f-----g hate that. If anything, my anger was directed at the
fact that I had to switch to PacifiST in the first place because my FUCKING
EXPENSIVE GEMULATOR TOS BOARD suddenly decided no longer to recognise the TOS
ROMs that are in it and that have been in it since day one and that never gave
any problems.
Yes, that last bit *was* a flame directed to Darek, GEMulators Inc., and fate.

>Yes, I tried it out.
>With no luck I'm afraid.
[...]
>First of all, I use GlueSTiK. (a problem?)

Possibly. There have been some problems reported from GlueSTiK users,
and Boris and I have discussed the problem off and on.

>When connecting to my host, I get modem activity, but NO characters
>on screen. (Same as previous versions.)
>Normally, with other clients, I get a prompt for a username and a password.

This sounds similar to what I've observed in tests: specifically, the
connection would establish normally, and the program would read
characters from the keyboard and send them to the remote host, but not
echo them, and no data was read from the remote host, even when there
was confirmed data ready to be read.

I may have narrowed part of the problem down to some timing code in the
read-from-remote-host routine, which is used to allow the program to
quickly oscillate back and forth between waiting for data from the
keyboard and waiting for data from the remote host. Watch this space
for further updates.

I recall reading a press release somewhere that stated a Falcon compatible verison of Notator/Creator does exist. I have no idea if it actually came into reality...but it was at least promised at one time.

Has anyone tried this?
Loading an older ST TOS image onto the Falcon and then attempting to run Notator at an 8mhz clock speed? My understanding is that the problem isn't in the processor, but in how Logic hooks directly into the GEM desk-top. In theory...the 030 should be able to handle any 000, or 020 processes (the backwards compatibility thing). Also my understanding is that the few programs that do choke under an 030 (such as spectre GCR) are due to clock speed, and other hardware problems more than the processor. I dunno...just yapping possibilities really.

Greetings!

Forgive me for my ignorance, but I am not used to neither Newsgroupd or the Atari ST scene (having sold my computer for about 5 years ago).

I would like to know if there is anywhere I can purchase a unused Atari ST. Like straight from the production line. I heard about something called "Toad Computers" though I didn't find any reference to this on their pages (only Falcon and TT stuff and I am not interested in that).

Thing is, if I can't get my old ST back (and I am working on that) I don't want anybody else's either. Please drop me a personal email since I don't get around to read newgroups that often. And btw, I live in Sweden is anyone feels like chatting or something generally... :)

Yours Sincerely, Robert Hagenstr&#65533;m

Richard, why not just use disk based tos roms for gemulator? Tos 2.06 and 1.62 seem to work just fine with Gemulator Classic and 2.06 works with Gemulator for Windows (at least the latest version - I belive).

I have not been able to get Atari Works to load with Pacifist. Can anyone verify if they've been able to use this program?

Thanks
Tom

Hi Guys,

Just thought I'd post a few comments that Bad Mood seems to be making more progress lately.

There is a beta version out recently (only to subscribers of the mailing list unfortunately) that handles a nice set of collision detection routines.

Sprite implementation _maybe_ added soon but you never know !

If you want to join the mailing list then e-mail :-

bad_mood-request@rand.thn.htu.se

with the subject as subscribe

I do have a Bad Mood page on my home page so if you're mildly interested and have a Falcon then check it out ! Likewise if you're a coder or graphics man and want to possible be a little productive then join ...!

Cheers,

Simon

>
> Nick
The supercharger had a NEC V20 in it, it was quite fast at the time it was
connected on the DMA port of the ST and could run at the same time as the
ST. You could connect an optionnal math processor. You need 2 ST disks to
run it, plus a copy of MS DOS (I would recommend 3.3)
Yep, you could use it's 1mb RAM as a RAMDISK, which would remain as long as
you would not swith the supercharger unit off.

>>a "can't find 1stword.str" error. And my source code of UVK suddenly gives a
>>"sprite string length wrong" error when in fact there is not a single sprite to

1st Wordplus is among the programs I have working perfectly. Even Word
Perfect works OK. Are you sure the original image dump is ok? Tried
again?

>2) Pacifist is very stable with all the programs I've tested so far, except a
>few bugs with the hard drive emulation.

About the only 'problem' I have at the moment is with the sound on
v0.43, or lack of it. The earlier version with sound worked but the
later versions didn't.

>a) You are using the latest version (0.43) that has a few more drive bug fixes

Yep, loads more things started to work with this version.

I got a QL emulator to work the other day! Impressive.

How about a Face Value for Hisoft Basic? Are the languages
significantly different? I am ready to buy Face Value this week,
once I'm sure I can get a copy of GFA 3.6. I have been told 3.6
is far less stable than 3.5 but I have a Falcon. Can 3.5 be patched
to become 3.6?

Now*accepting <new> and <previously published> writers for publication.
We are a NEW=YORK based international literary agency with three
offices: 2 in NEW=YORK and one in <FLORIDA.>
<Please follow guidelines for submission:>
For ALL fiction, including screenplays for TV & Movies: Send us a <brief synopsis>,
the first chapter, and include a self-addressed, stamped envelope=S.A.S.E.
Short Stories: Send brief synopsis, 3 pages, S.A.S.E.
Poetry: Send 3 poems, S.A.S.E.
For ALL nonfiction: Send us a <brief synopsis>, the first chapter, and include a S.A.S.E.
Do not send complete manuscript unless invited.

Yo! Rory Dude!

Whilst under caution Rory said to Officer Steve :~)

SS>> Ive been given a SuperCharger PC emulator for my ST. but unfortunately
SS>> there was no software suppplied.

SS>> Can anyone please help me with finding this software.

RS> Um funny thing is I didn't think you needed software with this
RS> emulator if its the one I think it is. You just put it in your machine
RS> and run the cords to the back make a whole and out pops a little switch
RS> you can use to switch between the PC emulator and the ST TOS - right?

Its an external device, and it chains onto the ACSI port.

I tried plugging it in and booting the machine, but no go. I did get a reply
from Rob perry who said he used to own one, and he /didnt/ say i /wouldnt/
need a driver, he just said he had one somewhere but needed a spring clean to
make it surface. So implying i need software and it'd take years for him to
find it. 8~)))

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

** Mega STE + PAK 030 @40Mhz, 68882 FPU, 4 Meg ST, 16 Meg TT RAM **
-= You will be approximated. Pentium of Borg.

: : them.

: Has anyone tried this?
: Loading an older ST TOS image onto the Falcon and then attempting to run
: Notator at an 8mhz clock speed? My understanding is that the problem
: isn't in the processor, but in how Logic hooks directly into the GEM
: desk-top. In theory...the 030 should be able to handle any 000, or 020
: processes (the backwards compatibility thing). Also my understanding is
: that the few programs that do choke under an 030 (such as spectre GCR) are
: due to clock speed, and other hardware problems more than the processor.

I believe that I have tried a number of variations (shutting down cache,
reducing clock speed, running backwards and other TOS emulators, etc...)
I'm pretty sure the Falcon will choke with an earlier TOS image. I just
wish that Emagic would have updated Notator rather than assuming that we
all want to use Logic. The version of Logic that I have has a number of
irritating flaws that make it difficult to sequence with. I hope that
those have been rectified in 2.5.

I think it's more STiK's problem than any server's. Some HTTP servers
are sending out information that STiK just can't handle correctly.
Recently I did some graphics for a local football team's Web site, and
I can't even see what they did with them because the host server is not
STiK-friendly (i.e., no graphics -- just 69-byte HTML error messages
interpreted as GIFs). Below is how the 'literature' describes this
particular HTTP error message:

406 None Acceptable

The server has found a resource matching the Request-URI, but not
one that satisfies the conditions identified by the Accept and
Accept-Encoding request headers. Unless it was a HEAD request, the
response should include an entity containing a list of resource
characteristics and locations from which the user or user agent can
choose the one most appropriate. The entity format is specified by
the media type given in the Content-Type header field. Depending
upon the format and the capabilities of the user agent, selection
of the most appropriate choice may be performed automatically.

Perhaps someone from the new STiK team can comment? I don't think it's
the OVL's fault, though.

The "unknown" source who is buying/has bought TOS is Wizztronics, makers of the Falcon rack case, D.E.K.A. 2 and the cartridge port expander as well as real-soon-now-ware such as the Barracuda and Hawk. They are planning to build Falcon compatible computers, as the Hades/ DirecT TT compatibles. I don't know if they are planning 040/060 or Power PC based machines (I spoke to Steve Cohen just a few days ago) but we may see something this year.

Hi, Greg!

No plans exist for a Hisoft Basic or a C (I have had requests...)
version as of now. I have had no reports on any unstability in 3.6TT.
For availability, try Columbus Soft:
cs@socrates.st.bauing.th-darmstadt.de. Good luck!

Bye,
Vegard Hofsoy

Floppyshop, Aberdeen, Scotland. 30th April 1997
*********************************************************************

*********************************
* PRESS RELEASE - VECTOR ART '97 *
*********************************

Floppyshop in association with Words & Images are pleased to
announce the immediate availability of VECTOR ART '97, a unique
collection of almost 450 individual pieces of high quality
vectorised clip art. All were created by John Weller a talented DTP
enthusiast who goes under the moniker of Words & Images. He has been
responsible for countless megabytes of high quality clip art over
the years and, more recently, the prestigious Bournemouth Collection
of Calamus fonts. He is probably better known in Atari circles as
the man behind Enthusiasts PDL and co-editor (along with Dave
Mooney) of the ST Enthusiats Newsletter (STEN).

John is a perfectionist by nature and believes that if a job's worth
doing, it's worth doing well, regardless of how long it takes!
That's why we asked him to compile this collection of quality vector
graphics. You just need to look at the Bournemouth CFN collection to
see what we mean. Over 300 fonts with every character in every font
individually kerned by hand! The fact that the job takes several
hundred hours to complete is entirely irrelevant, the end result
must be 100% perfect or John bins it and starts again! That's the
sort of quality we are used to in John's work and this latest
collection is no exception.

BITMAP or VECTOR
----------------
For those of you who don't know the difference between bitmap images
and their vector based counterparts here's a brief rundown. Bitmap
images are pixel based, each image being made up from thousands (or
hundreds of thousands) of dots. Typical bitmap formats are IMG, GIF,
TIFF, Degas, NEO etc. These images are usually designed for on-
screen display and serve the purpose well. Those which are intended
to be printed out (these are usually but not always in IMG format)
must be created at resolutions of 300 dots per inch or higher in
order to reproduce well when printed. The result is massive files
which occupy huge amounts of memory and disk space. Bitmap graphics
also have the disadvantage of not being very versatile when it comes
to scaling. Scaling an image to a resolution higher than was
